THOMSON, ALEXANDER, a miscellaneous writer and poet, born 1762, died at Edinburgh 1803. He was the author of 'Whist,' a poem in two cantos, 1791; 'The Paradise of Taste,' 1793; 'The German Miscellany, consisting of Dramas, Dialogues, Tales, and Novels, translated from that Language,' 1796; 'The British Parnassus at the Close of the Eighteenth Century,' and some others.

THOMSON, ANDREW, a doctor and eloquent preacher of the Scotch Kirk, 1779-1831.

THOMSON, ANTHONY TODD, a Scottish physician and professional writer, was born at Edinburgh in 1778. In 1806 he commenced practice at Chelsea, and in 1826 became professor of medical jurisprudence and the Materia Medica, at the London university. The professional works written by him are his 'Conspectus,' 'London Dispensatory,' 'Materia Medica,' and a 'Treatise on Diseases of the Skin.' Besides these, he translated Salvarte's 'Philosophy of Magic,' and edited an edition of Thomson's 'Seasons.' Died 1849.

THOMSON, JAMES, was born in 1700, at Ednam in Roxburghshire, of which his father was then the parish minister. To the images of agricultural life, with which this beautiful district furnished his childhood, were afterwards added scenes of another cast, in the pastoral parish of Southdean, to which his father removed. After having passed through the borough school of Jedburgh, he studied for several years at the university of Edinburgh. He was intended for the church, and is said to have been diverted from the profession by the censure of a theological professor on one of his exercises. At any rate, he had already written verses, and was ambitious enough to hope for fame by writing more; and, without any fixed view beyond literary employment, he started for London with his poem of 'Winter' in his pocket. David Mallet, whose own literary reputation is long since eclipsed, conferred eminent service on literature by smoothing the way for Thomson, whom he had known at college. The author of 'Winter,' being without money to buy a new pair of shoes, congratulated himself when a bookseller gave him three guineas for his poem. It was published in 1726, and became rapidly popular when one or two literary men had called attention to it. Thomson, provided for in the meantime as tutor in the family of Lord Binning, published 'Summer' and 'Spring' in the next two years; and in 1730, 'Autumn' being added, the four poems were printed together,

under their common title 'The Seasons.'—The appearance of the series was a phenomenon more remarkable than we are apt to suppose. The raw young Scotsman, meditating among the Cheviot hills and by the banks of the Tweed, had struck out a vein of poetry which had not been worked in England since the restoration. When his poem appeared, the artificial school of Pope was in the

[Arbour in Thomson's Garden.]

ascendant; and the fashionable poets of the day were alike distant from simplicity and nature in the themes they selected, and in the form with which they invested them. Thomson was far from being pure in taste: his tone of sentiment, too, is very often mawkish, and his diction almost everywhere pompous and pedantic. But the closeness with which he observed external nature has hardly ever been surpassed; and the poetic intuition with which he apprehends the features of a landscape, and the moral associations which clothe it with the finest part of its beauty, is as keen and exquisite as that of Wordsworth himself.—While the parts of his great work were in progress, Thomson produced, among other things, his unfortunate tragedy of 'Sophonisba.' In 1731 he travelled in France, Italy, and Switzerland, as a tutor; and the father of his pupil, on becoming the Lord Chancellor Talbot, gave him a sinecure place in his court, which was lost on the patron's death. This event drove him again to write for the stage. There is very little merit even in 'Tancred and Sigismunda,' the last and most successful of his plays. A pension from the prince of Wales raised him just above penury; and in 1745 his friend Lord Lyttleton, coming into power, made him surveyor-general of the Leeward Islands, an office yielding him three hundred a-year. He had long worked on his 'Castle of Indolence,' which he published in 1748. This beautiful poem shows a wonderful improvement in taste, and betrays a love of Old English poetry which was hardly felt by any other person of the time. The poet did not long enjoy the ease in which he was placed. Living in a cottage at Kew, he caught cold in sailing up the Thames, and died of fever in 1748. He was a friendly, shy, and indolent man. [W.S.]

THOMSON, John, a Scottish minister and landscape painter, born in Ayrshire 1778, d. 1840.

THOMSON, Thomas, M.D., born at Crieff, Perthshire, 12th April, 1773; died at Glasgow, 2d July, 1852. Dr. Thomson was educated at the parish school of his native place until his fourteenth year, when he was placed under the tuition of Dr. Doig, rector of the borough school of Stirling and author of 'Letters on the Savage State,' a work which attracted much notice at the time of its publication. His master, an eminent classical scholar, speedily imbued him with a love of literature, which afterwards enabled him to apply numerous improvements to his favourite science. On the conclusion of his scholastic studies he gained a bursary by public competition at the university of St. Andrews, where he remained for three sessions. In 1796, while pursuing his literary and scientific studies at the university of Edinburgh, he succeeded his brother, afterwards the Rev. Dr. James Thomson, minister of Eccles, as one of the editors of the 'Encyclopædia Britannica.' His attendance on the lectures of the celebrated Dr. Black, during the sessions 1795-96, imparted to him an intense interest in the science of chemistry, which never deserted him during his subsequent career. He entered on this study with devotion, and wrote the articles Chemistry, Mineralogy, Vegetable Substances, Animal Substances, and Dyeing Substances, which all appeared before the 10th December, 1800, and formed the groundwork of his celebrated 'System of Chemistry,' which soon became the text-book of the science in almost every country in Europe. In 1800—1 he gave his first course of lectures in Edinburgh to fifty-two pupils; a second course in the session of 1801 was attended by thirty-nine students. On the appearance of the first edition of his Chemistry his winter class swelled to ninety-six members. He continued his lectures till 1810, in the lawyer's metropolis of his native country, attended usually by the most select of the Scottish and English students, as his roll-book contains such names as James Mill the historian, James Stirling, Charles Badham, Henry Cockburn, J. Ballantyne, the distillers Haigs and Steins, G. Ballingall, John Abercrombie, Benjamin Travers, John Thomson, Andrew Rutherford, Sir James Clerk Maxwell, Sir Thomas Kirkpatrick, &c. &c. His lectures formed, however, but a secondary portion of his employment, his time being principally taken up with the preparation of new editions of his System, conducting an extensive series of researches upon behalf of the excise, a work which laid the basis of the Scottish legislation on this subject, and in various chemical consultations. During this period, also, he invented the system of symbols which are in universal use, as modified in some respects by subsequent discovery, and introduced the use of Greek and Latin numerals to designate the various degrees of oxidation, &c. of which bodies are susceptible, and which are also in general use. He was likewise first opened in this country a laboratory for practical manipulation. In 1810 he published his 'Elements of Chemistry.' In 1812 he visited Sweden, and published his travels in that country. In 1813 he commenced the 'Annals of Philosophy,' and continued to edit this journal for several years. In 1817 he was elected lecturer on chemistry in the university of Glasgow, a post which was endowed as a professorship in 1818. In 1825 he published 'An Attempt to Establish the First Principles of Chemistry by Experiment,' 2 vols. 8vo, comprising the results of many years'

nts to determine the atomic weights
most important of which have been
ubsequent experiments. In 1830-31
he 'History of Chemistry,' in 2 vols.
lines of Mineralogy and Geology,' 2
g a portion of the seventh edition of
Chemistry.' His last work was 'On
Distillation,' 8vo, 1849. Dr. Thom-
ies were exceedingly numerous, in-

THORPE, JOHN, a physician of the county of Kent, author of professional and antiquarian works, 1682-1750. His son, of the same name, also an antiquarian, 1713-1792.

THORWALDSEN, BERTEL, (*Albert*) was born at Copenhagen, November 19, 1770. His father, Gottschalk Thorwaldsen, a carver of wood, being a native of Iceland: his mother was of a Danish family. Bertel attended the Danish academy, and soon made such progress as to undertake the carving of figure-heads for ships. In 1793 he obtained the principal gold medal of the academy, which gave him the privilege of studying abroad at the expense of the government. He set out for Italy, May 20, 1790, in the Danish frigate Thetis; he landed at Naples, and arrived at Rome, March 8, 1797, and he did not return to his native country until 1819, after an absence of twenty-three years. His first important commission was from Mr. Thomas Hope, in 1803, and it was owing to the liberality of this distinguished patron of the arts that Thorwaldsen was enabled to remain and prosecute his profession in 'the Eternal City.' In 1812, on the occasion of Napoleon's expected visit to Rome, Thorwaldsen greatly distinguished himself by a sketch of the 'Triumphal entry of Alexander into Babylon,' which he completed with such expedition that the frieze, in plaster, was fixed up in one of the halls of the Quirinal palace within three months of the date of the commission. It is a composition of great extent, measuring 160 Roman palms (the palm is about nine inches) in length, and five in height; it has been twice executed in marble since, and is well engraved by Amsler of Munich. His principal works, however, were executed after his visit to Denmark; he returned to Rome at the close of 1820, and acquired the highest European fame by the following works:—Christ and the Twelve Apostles; St. John Preaching in the Wilderness; and the monuments to Copernicus, Pius VII., Maximilian of Bavaria, Prince Poniatowsky and others. The Christ and the St. John were for the church of our Lady at Copenhagen, where they are now placed. He again visited Denmark, in 1838, but finding the climate disagree with him, returned to Rome in 1841, but again visited Copenhagen in 1842, and died there suddenly in the theatre, March 24, 1844, of disease of the heart, aged seventy-three. Thorwaldsen bequeathed all works of art in his possession to the city of Copenhagen, to form a distinct collection, and the city now boasts of a great art museum, containing specimens of many classes of art, besides books, &c., known as the Thorwaldsen Museum; he left sufficient funds to endow it, and enable it to constantly add to its collection, foreign as well as Danish works. Thorwaldsen was never married, but left a natural daughter in Rome well provided. There is a cheap edition of outlines after all the works of Thorwaldsen, now in course of publication. —(H. C. Andersen, *Bertel Thorwaldsen eine biographische skitzze aus dem Dänischan übertragen von Julius Reuscher;* and the writer's notice in the *Supplement to the Penny Cyclopædia.*) [R.N.W.]

THOU, JAMES AUGUSTUS DE, in Latin *Thuanus*, a celebrated French historian and Latinist, whose father and grandfather were both presidents of the parliament of Paris, 1553-1617. De Thou inherited the talents of his ancestry for

statesmanship, and was employed as ambassador and finance minister. His son, FRANCIS AUGUSTUS, born at Paris about 1607, was beheaded on account of his privity to the conspiracy of Cinqmars against Richelieu, 1642.

THOUARS. See PETIT-THOUARS.

THOUIN, A., a Fr. horticulturist, 1747-1823.

THOURET, J. W., one of the most celebrated members of the French constituent assembly, born in Normandy 1746, executed 1794. His brother, MICHAEL AUGUSTUS, a distinguished physician, 1748-1810. W. F. ANTHONY, son of the deputy, author of an Encyclopædia, died 1832.

THOYNARD, NICHOLAS, a French scholar, author of a Harmony of the Gospels, 1629-1706.

THRASYBULUS, one of the great names of ancient Greece, period of the Peloponnesian or civil war between Sparta and Athens, was the son of Lycus, and was born at Steiria in Attica. He was commander of the infantry at Samos, when the Four Hundred was established on the ruins of the Athenian democracy (as noticed in the article THERAMENES), B.C. 411. He immediately swore his soldiers not to recognize the oligarchy, and united with Theramenes and Alcibiades to effect their destruction: at the same time he continued his part in the Peloponnesian war, and to him belongs the chief honour of the Athenian victory at Cyzicus. That dubious struggle being closed by the victory of Lysander, and the government of the humbled Athenians vested in the thirty tyrants, Thrasybulus took refuge in the Theban territory, where the patriots of the democracy once more rallied to him. After the death of Theramenes, Thrasybulus might have occupied his seat among the thirty, but he preferred the liberties of his country, and advancing at the head of the patriots, a thousand in number, he surprised the camp before Phyle, on the frontier of Bœotia, and after repeated successes became master of the government. In the second of the battles fought on this occasion fell Critias, at whose instance Theramenes had been compelled to drink the poisoned chalice. The despotic Thirty were now replaced by a council of ten representatives, and Thrasybulus exhibited the highest magnanimity towards his enemies. At length, having generously taken the field in aid of the Thebans, menaced by the yoke of Sparta, he was massacred in his tent while encamped in Cilicia, B.C. 389. [E.R.]

THRELKELD, CALEB, an English physician and naturalist, settled in Dublin, 1676-1728.

THROSBY, J., a topographer, 1740-1803.

THUANUS. See THOU.

THUCYDIDES, the historian, was an Athenian citizen, and belonged to the Attic borough Halimus. The date of his birth, which is not quite certain, was, perhaps, B.C. 471. Being of a good family, and living in a city which was the centre of Greek civilization, he received the highest education which the time afforded; and this, superadded to great ability, manifested itself in the 'eternal possession' which he bequeathed to posterity. He is said to have studied rhetoric under Antiphon of Rhammus, the most distinguished orator of the time, and to have received instruction in philosophy from Anaxagoras. The well-known story of his having been moved to tears of emulation by hearing Herodotus recite his history at the Olympic games, is generally admitted to be without foundation. At the commencement of the Peloponnesian war (B.C. 431), he entered the military service of his country, and in B.C. 424, held the command of a fleet of seven ships which lay off Thasos, when

[Thucydides—*From an Antient Bust.*]

Brasidas, the Lacedæmonian commander, invested Amphipolis, a city on the Strymon, belonging to the Athenians. Thucydides hastened to the assistance of his countrymen; and though he arrived too late to prevent a capitulation, he saved Eion, a seaport at the mouth of the river. In consequence of this failure, he was banished by the Athenians, or found it prudent to retire into voluntary exile, and passed the next twenty years of his life as a refugee. The accounts as to the places of his residence during his exile, are various and conflicting; we may only infer, that he could not live with safety in any place which was under Athenian dominion. He himself states, that he spent much of his time either in the Peloponnesus or in places under the Peloponnesian rule; and a minute description of Syracuse and the neighbourhood, leads to the belief that he visited those localities. It may, at least, be confidently affirmed that, during this eventful period, he was an attentive observer of the great struggle, collected materials for his history as the events proceeded, and to some extent, reduced them to the form in which they have commanded the admiration of all succeeding generations. When peace was concluded with the Lacedæmonians in B.C. 404, a decree was passed, permitting the return of the exiles; in consequence of which, Thucydides was restored to his country in the following year. According to the united testimony of the ancient writers, he came to a violent end, having died by the hand of an assassin; but the time and place of his death are not known. There was a tomb erected to his memory at Athens; and he probably died there. The History of Thucydides was designed to comprise a complete account of the events of the Peloponnesian war (B.C. 431-404), but breaks off in the middle of the twenty-first year (B.C. 411). It is divided into eight Books, the last of which, in consequence of the absence of

speeches, and a supposed inferiority of style, has, without any good reason, been held by some critics as not genuine. Thucydides has always been placed first in the first rank of philosophical historians. His moral reflections are searching and profound; his speeches abound in political wisdom; and the simple minuteness of his pictures is often striking and tragic. His style is concise, vigorous, and energetic; every word has its appropriate meaning, and not a clause is inserted which is not necessary for his narrative. Hence, he is sometimes harsh and obscure; his sentences are occasionally very involved, and the connection and dependence of the several parts difficult to perceive. [G.F.]

THUGUT, F., an Austrian statesman, and party to the coalition against France, 1739-1818.

THUILLIER, J. L., a Fr. botanist, died 1822.

THULDEN, C. A., a Ger. historian, 17th cent.

THULDEN, or TULDEN, THEODORE VAN, a painter and engraver, taught by Rubens, 1607-76.

THUMMEL, M. A., a Ger. writer, 1738-1817.

THUMMIG, L. P., a Germ. philos., 1697-1728.

THUNBERG, CHARLES PETER, a Swedish traveller and botanist, prof. at Upsala, 1743-1828.

THUNBERG, D., a Swedish engineer, d. 1788.

THUNMANN, J., a Swiss antiquarian, 1746-78.

THURLOE, JOHN, secretary of state during the protectorate of the two Cromwells, and the chief agent in detecting the plots of Harrison and the fifth monarchy men, born at Abbots-Reding, in Essex, where his father was rector, 1616, died 1668. His state papers, published in 1742, form a valuable mass of historical documents.

THURLOW, EDWARD, Lord, chancellor in the reign of George III., was born at Little Ashfield, near Stowmarket, in Suffolk, where his father was rector, in 1732. He was called to the bar in 1758, and entering parliament as member for Tamworth in 1768, became a distinguished supporter of the administration of Lord North. He succeeded Dunning as solicitor-general in 1770, and became attorney-general, after Sir William De Grey, in 1771. On the 3d of June, 1778, he was appointed lord chancellor, and raised to the peerage: on the retirement of Lord North, and the accession of the marquis of Rockingham in 1782, he still retained the seals by express favour of the king, though he neither supported the ministry, nor was much liked by the premier. On the coalition ministry of Fox and North being formed, he was compelled to retire; but he came to office again under Mr. Pitt, and, still pursuing his inconsistent course of action, was obliged to withdraw in 1792, from which time he took no part in public affairs. Lord Thurlow bears the character of an arrogant, factious politician, rather a bully than the debater in parliament, but yet a man of keen understanding: his character has been delineated by Lords Brougham and Campbell, and slightly sketched by the recent editor of the Rockingham papers. From the latter we cite the following: 'To Thurlow in his private relations the praise may be fairly awarded. He was a scholar, and a good and ripe one. He was an affectionate parent, and sometimes an active and cherishing patron. He had a kind of rough generosity, which moved him occasionally to take in good part a blunt remonstrance, and to prefer one who thwarted, rather than one who fawned upon him. He befriended Johnson and Crabbe—the one when the shadows of evening were closing upon him, the other when the trials of poverty pressed most heavily. In worse times there have been worse chancellors than Edward, Lord Thurlow, but an age of comparative freedom and refinement has rarely exhibited one who so ill understood, or at least so ill discharged, the functions of a statesman and legislator.' Died 1806. [E.R.]

THURMER, J., a Germ. architect, 1789-1833.

THURNEYSSER, L., an alchymist and astrologer, son of a goldsmith at Bale, 1531-1596.

THUROT, FRANCIS, a French corsair, who entered into the royal service, and harassed the English commerce in the northern seas; he was killed in an engagement when returning from his expedition to Ireland 1760.

THUROT, J. F., a French Hellenist, 1768-1832.

THWAITES, EDWARD, a Saxon and Greek scholar, professor at Oxford, and assistant of Dr. Hickes in compiling his Thesaurus, 1667-1711.

THYNNE, FRANCIS, a herald and antiquary, son of William Thynne, the editor of Chaucer, author of a Continuation of Holingshed's Chronicles, and a History of Dover, died 1611.

THYSIUS, A., a Dutch historian, 1603-1697.

TIARA, P., a Dutch *savant*, 1514-1586.

TIARINI, A., an Italian painter, 1577-1658.

TIARKS, J. L., a Ger. astronomer, 1789-1837.

TIBERIUS, CLAUDIUS NERO, the second emperor of Rome, was born B.C. 42, and succeeded Augustus A.D. 14. He was a great general, and a master of Greek and Roman literature, but as he grew older in years he disgraced himself with every species of cruelty and debauchery. He was probably insane long before the commander of his prætorian guard assumed the responsibility of putting him to death, March 16, A.D. 37.

TIBERIUS CONSTANTINE, called also TIBERIUS II., one of the most virtuous emperors of the East, was a native of Thrace, and was brought up at the court of Justinian. He succeeded to the throne in 578, and having suppressed the conspiracy of Sophia, widow of his predecessor, reigned unchallenged till his death in 582. A *third* of the name reigned emperor of the East, 698-705.

TIBULLUS, ALBIUS, a Roman patrician and elegiac poet, whose productions are marked by much feeling for the beauties of nature and the pleasures of a country life. They are generally printed with the compositions of Catullus and Propertius; flourished in the 1st century.

TICKELL, THOMAS, a popular writer and poet of the age of Addison, was born at Bridekirk, near Carlisle, 1686. His father was a clergyman, and Tickell was educated at Oxford, where he became a fellow of Queen's College. He obtained an appointment as under-secretary of state through the friendship of Addison, and some of his pieces appeared in the 'Spectator;' died 1740. His grandson, RICHARD, a political writer, died 1793.

TICOZZI, S., an Ital. ecclesiastic, 1762-1836.

TIECK, LUDWIG, was born at Berlin in 1773, and studied successively at Halle, Göttingen, and Erlangen. Poetry was from boyhood his favourite study; but, while he was always a ready and pleasing versifier, his poetical endowments, really very fine, worked most strongly when he wrote in

prose. His literary career exhibits three epochs.—In the first of these, beginning about 1796, and lasting ten years, he was one of the most efficient of the Romanticists, and, like Novalis, made the system attractive by displaying, in inventive compositions, an originality of fancy and depth of feeling not possessed by the Schlegels, the critical chiefs of the school. The works he produced during this period were both numerous and diversified. Some of them were Dramatic and Poetical Parodies, whimsically uniting jest and earnest; the principal of these being 'Bluebeard' and 'Puss in Boots.' Others were Tales, or compositions like tales, which, following in the wake of 'Wilhelm Meister,' are referred by the Germans to the class of 'Art-Novels:' such are the 'Effusions of the Heart of an Art-loving Cloister-Brother,' and 'Franz Sternbald's Wanderings.' Other pieces, like 'Genoveva' and 'The Emperor Octavianus,' are saintly or historical Legends, dramatically treated, with a close and studied imitation of the rude drama of the middle ages. Others again, and these the most poetical of all Tieck's works, are Popular Legends (Volksmährchen), related in a prose narrative form, with great fulness of playful fancy, very much beauty of description, and a simplicity or *naiveté* of manner which, sometimes fairly childish, is yet wonderfully pleasing. The first attack of a painful disease of the joints, which made Tieck very long an invalid, came on in 1806, and forced him to cease from literary labour for several years.—He resumed work in 1814, and for five years was chiefly busied on the Old English Drama, which he knew better than any other foreigner ever knew it; while he translated it with great spirit, and criticised it, not indeed without great caprice and rashness of judgment, but with much delicacy of poetical feeling. He began with his 'Old English Theatre,' containing translations and criticisms of old plays, some of which were on themes afterwards handled by Shakspeare, while others were maintained by Tieck (on grounds abundantly fantastic and slippery) to be really his, in spite of the English critics. Visiting London in 1818, and reading and copying in the Museum, he collected materials for two volumes of translations of plays preceding Shakspeare's ('Shakspeare's Vorschule').—In 1819, after a life of many wanderings, he finally took up his residence in Dresden, where he enjoyed a pension and honorary counsellorship. Besides collections of his earlier poems and other works, the chief business of this, the last period in his history, was the writing of short Novels, most of which first appeared in Annuals; and which, critical and dissertative in character, and full of dialogue, have much more of analytic and reflective refinement than of narrative impressiveness, and show surprisingly little of the writer's early vein of poetry. Among the most interesting of these are 'Pietro of Abano,' and 'The Revolt in the Cevennes.' Others are 'Art-Novels,' to which class belong the 'Poet-Life' and 'Poet-Death,' having respectively for their heroes Shakspeare and Camoens. Tieck died at Dresden in the spring of 1853. [W.S.]

TIEDEMANN, DIETRICH, a Ger. philosopher and opponent of Kant, famous for his researches in the history of philosophy, anthropology, the origin of languages, and similar subjects, 1745-1803.

TIEDGE, C. A., a German poet, 1752-1841.

TIEFFENTHALER, JOSEPH, a Tyrolese missionary, thirty years resident in India, last cent.

TIEPOLO, GIOVANNI BATISTA, called *Tiepoletto*, a celebrated Venetian painter, 1692-1769.

TIEPOLO, J., a Venetian poet, 16th century.

TIEPOLO, JACOB, a doge of Venice, distinguished as a partizan of the Guelphs, 1229-1249. LAURENT, his son, doge 1268-1275. BOHEMOND, of the same family, chief of a conspiracy against the doge, Gradinijo, which led to the establishment of the Council of Ten, 1310.

TIEPOLO, N., a Venetian poet, 16th century.

TIERNEY, GEORGE, a famous parliamentary debater and political writer, secretary for Ireland, and president of the board of control during the administration of Fox and Grenville; b. in London, where his father was a merchant, 1756, died 1830.

TIGLATH PILESER, or THEGLAT-PHALASSAR, son and successor of Sardanapalus as king of Assyria, supposed date 747-728 B.C.

TIGNY, MARIN GROSTETE DE, a French naturalist, who, aided by his wife, produced a work in ten volumes on the natural history of insects, valuable as a compendium, 1736-1799.

TIGRANES, several princes of Armenia:—TIGRANES I., a friend and ally of Cyrus, B.C. 565-520. TIGRANES II., the first king of Armenia of the Arsacides' dynasty, was placed on the throne by his brother, Mithridates II., king of the Parthians; he laboured many years in developing the commercial and industrial resources of the state. B.C.128-95. TIGRANES III., called *the Great*, son of the preceding, succeeded him in B.C. 95 married Cleopatra, daughter of Mithridates the Great, and was his faithful ally in the gigantic with Rome; date of his death unknown. next TIGRANES was a captive at Rome, but came king by the authorization of Augustus, allied himself with the Parthians against masters; died 6 B.C. His son, TIGRANES occupied the throne a short time, and died n... TIGRANES V., was a grandson of Herod, ki... Judæa, and governed Armenia by sufferance o... TIL, S. VAN, a Dutch theologian, 1644-173...

TILENUS, DANIEL, a protestant theologian... the French church, born in Silesia, 1563-1633.

TILING, J., a German physician, 1688-1718.

TILING, M., a German naturalist, died 1685.

TILLADET, J. R. DE LA MARQUE DE, French writer, theologian, and philos., 1656-171...

TILLEMANS, PETER, a Flemish painter of landscapes and imaginary views, 1684-1734.

TILLEMONT, SEBASTIAN LE NAIN DE, a famous critic and historian of the Port Royal, author of a 'History of the Emperors and other Princes during the First Six Ages of the Church,' 'Materials towards the Ecclesiastical History of the First Six Ages,' and of much other historical matter, highly valued for extreme accuracy, 1637-1698.

TILLY, PETER ALEXANDER, Count De, a royalist officer of the period of the French revolution, author of some political works relative to the events of that time, 1764-1815. Another COUNT TILLY, not of the same family as the preceding, took up arms for the republic, and afterwards served Napoleon, died 1822.

TIMÆUS, a Pythagorean philosopher, called 'the Locrian,' from his birth-place; known as the instructor of Plato, and highly eulogized by him. A Greek historian, of the same name, lived about 350 B.C. A third TIMÆUS was a sophist of the third century of our era, and author of a Dictionary of Platonic phrases.

TIMANTHES, a Greek painter, 400 B.C.

TIMOCREON, a comic poet, 476 B.C.

TIMOLEON, one of the greatest of Greek generals and patriots, if not the ideal of the Grecian hero, was born in Corinth about 410 B.C. His first exploit was the deliverance of Corinth from the armed dictatorship of his elder brother, Timophanes, though it was necessary to put him to death, and bear the curses of his mother, who had made the tyrant her especial favourite. Timoleon, whose motives were not understood, was execrated for his share in this tragedy, and his existence became so burdensome that he meditated self-destruction, and retired altogether from public life: the affecting narrative may be read in Plutarch. After a lapse of twenty years, 343 B.C., he was recalled by the Corinthians, and sent to the aid of the Syracusans, then suffering from the despotism of the younger Dionysius. In this expedition, success attended upon success until all Sicily was redeemed from the cruel slavery to which it had been brought, and Syracuse became the seat of a republican freedom which linked in one brotherhood all the cities that had suffered from the petty tyrants who oppressed them: the Carthaginians were also expelled, and their army of 70,000 men, led by Hamilcar and Hasdrubal, defeated by a mere handful of patriots under Timoleon. It is the conduct of the deliverer after these victories that must decide his character, and to him belongs the rare virtue of abdicating a power which he still virtually exercised as a private citizen. Forty thousand Greeks flying before the sword of Philip, the father of Alexander, were glad to accept the new home offered to them in the devastated cities of Sicily; and Timoleon, having organized the states, retired to private life, but always attended the deliberations of the people. In his latter years he went to their assemblies in a chariot, from which he also addressed them on account of his blindness: it was his highest joy that he had secured to the Syracusans perfect freedom of opinion, and the impartial operation of the laws. He was so highly honoured, that his birth-day was kept as a public festival; and when he died, B.C. 337, he was buried with great magnificence at the public cost. The value of his life was soon after proved by the anarchy which began to spread, and the unruly spirits which obtained the supremacy in Syracuse. [E.R.]

TIMOMACHUS, a Greek painter, abt. 300 B.C.

TIMON, a Greek poet, and disciple in philosophy of Pyrrho, B.C. 270.

TIMON, surnamed 'the Misanthrope,' the original of that character in Shakspeare, B.C. 420.

TIMON, E., a Greek physician, last century.

TIMON, S., a famous Hungarian Jesuit, historian, and antiquary, 1675-1736.

TIMOPHANES, a tyrant of Corinth, who was assassinated B.C. 365. See TIMOLEON.

TIMOTHEUS, a Greek poet and musician, unrivalled in his age, 6th century B.C. He excelled in lyrical composition, and was a skilful performer on the cithara, or harp, which he improved by the addition of two chords.

TIMOTHEUS, called 'of Thebes,' a celebrated musician, time of Alexander the Great.

TIMOTHEUS, an Athenian general, who took a distinguished part in the social wars, and was condemned for avoiding a naval conflict, B.C. 358.

TIMUR. See TAMERLANE.

TINDAL, MATTHEW, one of the successors of Toland and Shaftesbury in the School of English Deists or Freethinkers, was born at Beer Ferrers in Devonshire about 1657, and was admitted doctor of laws at Oxford in 1685. He retained his fellowship during the reign of James II. by professing the Roman Catholic faith; he afterwards recanted, however, and adopting revolutionary principles, went to the other extreme, and wrote against the Nonjurors. He now became an advocate, and sat as judge in the court of delegates, with a pension from the crown of £200 per annum. Some time afterwards, considerable attention was drawn to him, by his work, entitled 'The Rights of the Christian Church' and the ensuing controversy; but the production which has rendered [illegible] name a memorable one was his 'Christianity as Old as the Creation, which appeared in 1730, and provoked replies from Dr. Warburton, Leland, Foster, and Conybeare. Dr. Middleton endeavoured to take a middle course in this controversy, as may be seen in that article, but the most effective answer, though its very existence seems to have been forgotten, was that embodied in the 'Ap[illegible] of William Law, published 1740. Tindal's [illegible] argument was mainly coincident with Shaftesbury's that the immutable principles of faith and [illegible] must be found within the breast, and that no external revelation can have any authority equal to the internal; this he supported by much learning and show of argument, which Warburton thought he had replied to by the mass of learned evidence contained in his 'Legation.' William Law, making no account of literary evidence, replied by a masterly development of the philosophy of the [illegible] and final recovery of mankind; a book remarkable for close argument and for its many fine illustrations, but now obsolete in certain fundamental principles. Tindal died in 1733, and was interred in Clerkenwell church, near the remains of Bishop Burnet. [E.F.]

TINDAL, NICHOLAS, nephew of the preceding, chiefly known by his translation and continuation of Rapin's History of England, 1687-1774.

TINDAL SIR NICHOLAS CONYNHAM, a distinguished lawyer and member of parliament, who rose to the dignity of lord chief justice of the Common Pleas, 1777-1846.

TINDAL, WILLIAM. See TYNDALE.

TINELLI, T., a Venetian painter, 1586-1638.

TINGRI, P. F., a French chemist, 1743-1821.

TINTORETTO, JACOPO ROBUSTI, called Tintoretto from the circumstance of his father being

the masterpieces of Titian: after Venice, the gallery of the Prado at Madrid gives the greatest display of his powers. It has been assumed that Titian visited Spain partly from the fact of the patent of nobility, granted by Charles V., creating him Count Palatine of the empire, and knight of the order of St. Iago, being dated at Barcelona. This great painter died at Venice of the plague, in 1576, having lived to the extraordinary age of ninety-nine years. To describe fully his masterpieces alone, would occupy a volume; of his scholars, Paris Bordone, Bonifazio Veneziano, Girolamo di Tiziano, and his own son Orazio Vecellio, were able painters.—(Vasari; Ridolfi; Zanetti, *Della Pittura Veneziana*, &c.; Cadorin, *Della amore ai Veneziani di Tiziano Vecellio*; Northcote, *Life of Titian*, 1830.) [R.N.W.]

TITIUS, G. G., a German jurist, 1661-1714.

TITON DU TILLET, Everard, a master of polite literature and patron of letters, projector of a French Parnassus in honour of Louis XIV., a description of which he published, 1677-1762.

TITSINGH, J., a Dutch traveller, 1740-1812.

TITTEL, G. A., a Ger. philosopher, died 1816.

TITTMANN, John Augustus Henry, a German professor of theology, au of 'Encyclopädie der Theologischen Wissenschaften,' 1773-1831.

TITUS, a disciple of Paul, and preacher of the Gospel in Dalmatia, 1st century.

TITUS LIVIUS. See Livy.

TITUS, Flavius Vespasianus, emperor of Rome, was the eldest son of the emperor Vespasian; he was born in the year 40, and educated with Britannicus at the court of Nero. like the latter, he gave way to vices which afforded little promise of a happy reign. From 67 to 70 he was carrying on the war in Judæa, the whole conduct of which devolved upon him on his father's election as emperor, the capture of Jerusalem, on September 2, of the year last mentioned, brought this struggle to a close, after which Vespasian and Titus were both honoured with a triumph. It is almost unnecessary to mention that the fullest details of this war, the unparalleled cruelties and sufferings with which it was attended, may be read in Josephus; the episode of the passion of Titus for Berenice will be found in Suetonius. On the death of Vespasian in 79, Titus succeeded as emperor, commencing, by repeated proofs of his reformation, one of the most princely and beneficent reigns in the annals of Rome: for this the wisdom of his father was partly to be thanked, he having associated Titus with him in the empire, and developed the nobler traits of his character by the generous trust reposed in him. In the year of his succession the great eruption of Vesuvius took place, which buried Herculaneum, Stabiæ, Pompeii, and other towns beneath its ashes; in the following year a fatal epidemic and a fearful conflagration occurred in Rome, and in the next again, September 13, 81, Titus expired, perhaps of poison, and was succeeded by his brother, Domitian: the hopes he had excited were so great that his death was mourned as a public calamity, a rare honour for an emperor of Rome. [E.R.]

TIZIANO VECELLI. See Titian.

TOALDO, J., an Italian astrologer, 1719-1798.

TOBIN, A. M. De., a Sp. painter, 1678-1758.

TOBIN, John, a solicitor, born at Salisbury, author of 'The Honey Moon,' 'All's Fair for Love,' and several other plays, 1770-1804. James, his brother, a poet, died 1815.

TOD, James, an officer of the East India Company, author of 'Travels,' and Surveys, died 1835.

TODD, Hugh, vicar of Stanwix, in Cumberland, au. of a 'Description of Sweden,' 1658-1728.

TODE, H. J., a German naturalist, 1738-1797.

TODE, J. C., a Ger. medical writer, 1736-1805.

TOFINO DE SAN MIGUEL, Don Vicenso, a Spanish mathemat. and astronomer, 1740-1806.

TOINARD, N., a Fr. antiquarian, 1629-1706.

TOLAND, John, one of those learned freethinkers who rendered themselves conspicuous after the publication of Locke's philosophy, was born in Ireland, of Roman Catholic parents, in 1669. As early as his sixteenth year, he shook off the superstitions in which he had been educated, and in consequence of this change, completed his education at Glasgow and Edinburgh, taking the degree of M.A. in the latter university in 1690. At Leyden, where he next passed two years, he made the acquaintance of Leclerc and Leibnitz, and returning to England again, published, in 1695, his 'Christianity not Mysterious.' This work was launched forth in the midst of a controversy concerning Socinian principles—that in which South, Sherlock, Wallis, Howes, Cudworth, and others, took part,—and was designed to show 'that there is nothing in the Gospel contrary to reason, or above it, and that no Christian doctrine can be properly called a mystery.' Attacks were made upon the author from all sides, the grand jury of Middlesex answered his work in a presentment,' and the Irish Parliament ordered it to be burnt by the hangman. Toland had gone to Dublin to escape the storm raised against him, chiefly by the Dissenters, in London, and he was now compelled to return to avoid a prosecution by the attorney-general of Ireland: thus alienated from all parties he declared himself a 'Latitudinarian,' though he always professed himself a Christian. His subsequent works were, a 'Life of Milton,' which accompanied an edition of that author's prose works, 'Amyntor,' 'Origines Judaicæ,' 'The Philosophy of the Ancients,' 'Hypatia,' 'Nazarenus,' 'History of the Soul's Immortality among the Heathens,' 'The Origin and Force of Prejudices,' and numerous political pamphlets. His principal object, so far as these bore on religion, was to sustain his original controversy, to destroy the authority of the Books of Scripture deemed canonical: but he was a vain man, fond of distinction, however obtained, and was probably more concerned about the great names he could associate with his own, than the principles he professed. He died at Putney in the fifty-third year of his age, 1722. In this neighbourhood resided the Gibbons, Bolingbrokes, and Malletts. [E.R.]

TOLEDO, Fernando Alvarez De, duke of Alba, or Alva. See Alva.

TOLEDO, F. De, Spanish viceroy of Peru, died in prison after his return home, 1581.

TOLEDO, J. De, a Spanish painter, died 1645.

TOLEDO, Don P. De, Spanish viceroy of Naples under Charles V., 1481-1553. Peter, of the same family, ambassador in 1608.

TOLER, John, Lord Norbury, chief justice of the Common Pleas in Ireland, rose to distinc-

eriod of the rebellion, distinguished as a
5-1831.
ET, F., a Spanish cardinal, 1532-1596.
ET, F., a French physician, died 1724.
ET, J., an English cardinal, died 1274.
LET, ELIZABETH, an accomplished Eng-
, author of Poems, 1694-1754. Her ne-
EORGE TOLLET, author of valuable Notes
speare, died 1779.
LIUS, CORNELIUS, a Dutch philologist,
ut 1620, died 1662. His brother, ALEX-
also a philologist, died 1675. JAMES, a
other, a learned physician and professor,
96. Another Dutch philologist, named
NN TOLLIUS, was professor at Harden-
d Leyden, 1742-1822.
OMEI, J. B., an Italian Jesuit, cardinal,
tesman, 1655-1726. NICHOLAS, of the
mily, a Jesuit and ecclesiastical writer,
74.
OMMEI, CLAUDIO, an Italian master and
r of polite literature, 1492-1555.
ASELLI, J., an Ital. naturalist, 1733-1818.
ASINI, GIACOMO FILIPPO, bishop of
nova, a biographical writer, 1597-1654.
BES, J., a nonconformist div., 1603-1676.
LINE, GEORGE, successively bishop of
and Winchester, author of 'Elements of
n Theology,' 'Memoirs of Mr. Pitt,' whose
y he had been, and a 'Refutation of the
of Calvinism brought against the Church
nd,' 1750-1827. The family name of this
was PRETTYMAN, but he took that of
on inheriting an estate left to him.
LINS, ELIZABETH SOPHIA, a novelist
cellaneous wr., b. in London 1768, d. 1828.
DUZZI, J. C., an Ital. historian, 1617-73.
E, THEOBALD WOLFE, founder of the
ion of 'United Irishmen,' was born in
1763, and by profession a barrister. He
ced his political agitation in 1790, and in
evailed on the French directory to send
dition in support of the Irish insurrection.
t was scattered by storms, and Tone was
isoner when conducting a petty armament
at later. He committed suicide in prison,
er 19, 1798.
STALL. See TUNSTALL.
KE, ANDREW, a learned schoolmaster and
atician, born in London 1673, died 1731.
KE, JOHN HORNE, a political character of
siderable consequence in the last century,
the literary world as a grammarian and
st, was born in Newport-Street, West-
where his father was a poulterer, in 1736.
cation having been completed at Cam-
e entered into orders, and became, in 1760,
Brentford in Middlesex. He was never
attached to the church, however, but
the greater part of his time on law and
for which the factious nature of the times,
supposed designs of George III. and Lord
rded abundant scope. From 1765 to 1767
shed his philippics against the court and
f justice, Lord Mansfield, in favour of
he popular idol, and soon after made the
lance of that gentleman, as well as of Vol-
d Sheridan, on the continent. In 1770 and
period of great political excitement in Lon-
don, he founded the Society for Supporting the Bill of Rights; this produced a rupture between him and Wilkes, in consequence of the selfish advantages sought by the latter; about the same time he promoted the publication of the Debates in Parliament, in defiance of the House of Commons. From 1773 to 1782 he was of course the avowed enemy of the administration of Lord North, and the friend of the American patriots; in this interval he underwent a year's imprisonment and a fine of £200. The most important event of his life was his trial for high treason, in conjunction with Hardy; this took place at the Old Bailey in 1794, and was remarkable for the ability and self-possession with which Mr. Tooke defended himself; it ended in an acquittal, and he afterwards numbered among his friends Sir Francis Burdett and Major Cartwright. In 1801 he became member of parliament for a nomination borough, having failed in two previous attempts as a candidate for the popular suffrages. Nothing particular marked his subsequent career, and he died at Wimbledon, having first destroyed all his MSS., in 1812 His greatest literary work is his 'Diversions of Purley,' first published in 1786; attempts have been made to prove that he was the real 'Junius.' [E.R.]

TOOKE, WILLIAM, originally a printer, afterwards a foreign chaplain of the Church of England, author of 'Varieties in Literature,' 'Life of Catherine II.,' 'A View of the Russian Empire,' 'A General History of Russia,' and Translations of Lucian and of Zollikofer's Sermons; born at Islington 1744, died 1820.

TOPFER, H. A., a Ger. philosopher, 1758-1833.

TOPHAM, E., an English writer, died 1820.

TOPINO-LEBRUN, F. J. B., a French historical painter, perished on the scaffold, 1769-1801.

TOPLADY, AUGUSTUS MONTAGUE, a celebrated Calvinistic divine and controversial writer, was born at Farnham in Surrey, 1740, and became vicar of Broad Hembury in Devonshire, where he composed most of his writings, in 1762. In 1775 he removed to London, and from that period officiated at the chapel of the French Reformed, near Leicester Fields. Died August 11, 1778.

TOPPI, N., an Italian historian, 1603-1681.

TORDENSKIOLD, the name conferred on PETER WESSEL, a famous Danish admiral, when ennobled by Frederic IV. for his victory over the fleet of Charles XII., king of Sweden, 1691-1720.

TORELLI, JOSEPH, an Italian scholar and mathematician, editor of Archimedes, and translator of Æsop's Fables and of the Æneid, 1721-1781.

TORELLI, L., an Ital. biographer, 1609-1683.

TORELLI, L., an Italian jurist, 1489-1576.

TORELLI, P., an Italian poet, 1536-1608.

TOREN, OLAUS, a Swedish naturalist and traveller in the East Indies, died 1753.

TORFÆUS, THORMODUS, in Icelandic THORMODUR TORFASON, or THORMOD TORVESEN, a learned historian of Norway, 1648-1719.

TORNIEL, or TORNIELLI, AUGUSTUS, general of the Barnabites, and wr. of annals, 1543-1622.

TORNIELLI, J. F., an Italian poet, 1693-1752.

TORQUEMADA, JOHN DE, in Latin *Turrecremata*, a Spanish cardinal, confessor to Isabella of Castile, 1388-1468. A Franciscan friar, of the same names, published a 'History of the Wars and Discoveries in the West Indies,' 1615. A THOMAS

DE TORQUEMADA was first inquisitor-general of Spain, and acted with such relentless vigour that, in sixteen years, he had committed 8,800 victims to the stake, and 90,000 to various measures of imprisonment; he also banished 100,000 Jews from the country in that period, 1420-1498.

TORRE, BERNARDO DELLA, an ecclesiastical writer, chaplain to Murat, 1736-1820.

TORRE, FILIPPO DEL, an Italian antiquary and master of polite literature, 1657-1717.

TORRE, GIOVANNI MARIA DELLA, an Italian antiquary and natural philosopher, a great improver of the microscope, 1713-1782.

TORRENS, SIR HENRY, an Irish officer of the British army, who acted as secretary to Sir Arthur Wellesley in the peninsula, and since then became the promoter of many improvements in military regulations; born in Londonderry 1779, died 1828.

TORRENTINUS, HERMANN VAN BECK, called, a Dutch *savant*, author of the earliest attempt at an historical dictionary, 1450-1520.

TORRENTIUS-LÆVINUS, otherwise LIEVIN VANDER BEKEN, a Belgian prelate, philologist, and Latin poet, 1525-1595.

TORRICELLI, EVANGELISTA, a famous Italian mathematician and natural philosopher, professor at Florence, time of Galileo, 1608-1647.

TORRIGIANI, PIETRO, a Florentine sculptor, who met with a tragical death in Spain, 1522.

TORRIGIANO, T., a physician, 1270-1350.

TORRIJOS, DON JOSE MARIA, a Spanish general, born at Madrid 1791, distinguished himself in the revolution of 1820, executed 1823.

TORRINGTON, GEORGE BYNG, Viscount, a naval officer who served in the late war, 1768-1831.

TORRUBIA, JOSE, a Spanish Franciscan, historian, and naturalist, died 1768.

TORSINELLO, H., an Ital. historian, 1545-99.

TORSTENSON, LEONARD, Count, a Swedish general, time of Gustavus Adolphus, 1595-1654.

TORSTI, F., an Italian physician, 1658-1741.

TOSCAN, G., a Fr. horticulturist, 1756-1826.

TOSCANELLA, PAOLO DEL POZZO, an astronomer of Florence, time of Columbus, 1397-1482.

TOSELLI, F., an Ital. biographer, 1699-1768.

TOSHI, D., an Italian theologian, 1535-1620.

TOSSANUS. See TOUSSAIN.

TOTILA, king of the Ostrogoths in Italy, totally vanquished by Belisarius and killed, 541-552.

TOTT, CLAUDE AKESON, a Swedish general, distinguished against the Russians in 1573, d. 1596.

TOTT, CLAUDE, Count, a Swedish senator and ambassador, time of Christina, 1616-1674.

TOTT, FRANCIS, Baron De, a French officer and diplomatist, of Hungarian origin, employed at Constantinople and the Crimea, author of Memoirs of the Turks and Tartars, 1733-1793.

TOTZE, E., a Prussian historian, 1715-1789.

TOULLIER, C. B. M., a Fr. jurist, 1752-1835.

TOULMIN, JOSHUA, successively a baptist and unitarian minister, editor of a new edition of Neale's History of the Puritans and other works, 1740-1815.

TOUP, JONATHAN, a classical scholar and critic, born at St. Ives, in Cornwall, 1713, died 1785.

TOUR, B. DE LA, a French preacher, last cent.

TOUR, BAILLET, Count De La, an Austrian general, time of Joseph II., died 1806.

TOUR, J. B. BONNAFAS DE LA, a French Jesuit preacher and religious poet, 1712-1777.

TOUR, MAURICE. See DELATOUR.

TOUR, THEODORE. See LATOUR.

TOUR D'AUVERGNE, THEOPHILUS MALO CORRET DE LA, called *the first Grenadier of France*, and long the terror of the enemy in Spanish warfare, 1743-1800.

TOURLET, R., a French Hellenist, 1770-1836.

TOURNEFORT, JOSEPH PITTON DE, a celebrated botanist, was born at Aix in Provence in 1656. He died in 1708. He was destined by his parents for the church, but at the death of his father he chose the profession of medicine. Botany was his favourite study, and to the prosecution of this, he ultimately devoted his life. He travelled in quest of plants over the Alps and Pyrenees, through Spain and Portugal; and afterwards visited Holland and England. He had for many years the superintendence of the Jardin du Roi, and lectured on botany to a numerous throng of students. Tournefort was one of a celebrated triumvirate of botanists which the end of the 17th and beginning of the 18th centuries produced. Ray in England, Rivinus in Germany, and Tournefort in France, were contemporaries and correspondents, and botany is much indebted to their labours for the progress it has since made. Tournefort's method of classification of plants is derived almost entirely from the flower, and, considering the time in which it was published, possesses very great merit. In France he is esteemed as much as Ray is in England; and the two philosophers are justly reckoned each the pride of their country. In 1700 he was selected, under royal patronage, to proceed to the Levant, to investigate the plants mentioned by ancient writers and to discover new ones. His journey occupied more than two years, during which he made a large collection of plants and other objects of natural history; and upon his return he was nominated professor of medicine at the college of France. His chief botanical works are the 'Elements de Botanique,' and the 'Institutiones Rei Herbariæ' which possess great merit. Plumier named a genus of plants after him, Pittonia: but Linnæus afterwards changed it to Tournefortia, which it now retains. [W. R.]

TOURNELY, H., a Fr. theologian, 1658—1729.

TOURNEMINE, R. J. DE, a learned Jesuit, author of 'Reflections on Atheism,' 1661-1739.

TOURNEUR, P. C., a Fr. translator, 17[illegible]-[illegible].

TOURNIE, J. J., a Fr. mechanician, 169[illegible]—1770.

TOURNON, C. T. MAILLARD DE, an Italian cardinal and legate to India and China, 166[illegible]—1710.

TOURNON, F. DE, a French cardinal and diplomatist, time of our Henry VIII., 1489-156[illegible]

TOURNON, P. C. CASIMIR MARCELLIN, Count De, a French statesman, died 1838.

TOURON, A., a French biographer, 168[illegible]—17[illegible]

TOURRETTE, MARC-ANTOINE LOUIS CLARET DE LA, a French naturalist, 1729-1793.

TOURTELLE, S., a French physician, [illegible] of 'Philosophical History of Medicine,' 1756-18[illegible]

TOUSSAIN, DANIEL, in Latin Tossanus, a learned protestant theologian, 1541-1602. P[illegible] his son, author of a Life of the elder Tossanus and of various controversial works, died 16[illegible]

JAMES, a learned Hellenist, died 1547.

TOUSSAINT, F. V., a Fr. deist, 1715-17[illegible]

TOUSSAINT DE SAINT LUC, the father, a Carmelite and ecclesiastical historian, died 16[illegible]

T, L'OUVERTURE, was a negro, the slave parents, and was himself a mingo during the greater portion of s said to have been born in 1743. lt of the blacks broke out in that Toussaint joined his fellow-country- d not sully himself by participation atrocities that marked the furious icks, mulattoes, and whites, each er two races, by which the unhappy istated. Toussaint and his fol- for a time with valour and skill; the negro generals deserted their

[Castle of Joux.]

st Toussaint made his submission, a farm in the interior, leaving the ledged masters of St. Domingo. For two months Toussaint lived in retirement, but the French were jealous of his possible influence over the negroes, and, on July 5, 1802, Le Clerc caused Toussaint to be arrested, and sent him a prisoner to France. He was confined in the castle of Joux, in the Jura mountains, where he died on the 27th April, 1803. Toussaint L'Ouverture is a bright example of the intellectual energy and greatness of which the maligned negro race is capable; and his fate is one of the saddest among the many melancholy proofs of the guilt and meanness which have marked Europeans in their dealings with their African brethren. [E.S.C.]

TOUSTAIN, C. F., a learned Benedictine, author of a 'Traité de Diplomatique,' 1700-1754.

TOWERS, JOSEPH, a miscellaneous and political writer, born in Southwark, where his father was a dealer in second-hand books, 1737, died 1799. Towers began life as a printer, but became a preacher among the dissenters, and his merits were recognized by the degree of LL.D., conferred upon him by the university of Edinburgh. Among his works are 'A Review of the Genuine Doctrines of Christianity,' 'A Vindication of the Political Opinions of Locke,' and some articles in the Biographia Britannica.

TOWERSON, G., a theologian, died 1697.

TOWGOOD, MICAJAH, a dissenting minister, and famous advocate of the principle of separation from the Established Church; born in Devonshire 1700, died 1792.

TOWNLEY, CHARLES, a gentleman of Lancashire, who is numbered in the ranks of English scholars and connoisseurs, was born at the seat of his ancestors, 1737. He resided many years at Rome, where he collected the valuable marbles now in the British Museum, and known as the Townley Collection; died 1805. His uncle, JOHN, was an officer in the French army, and translated Hudibras into the language of his adopted country; died 1782.

TOWNLEY, JAMES, rector of St. Bennet's, Gracechurch-Street, and subsequently master of Merchant Tailors' school, known as a dramatic writer, and chiefly by his piece, entitled 'High Life Below Stairs,' 1715-1778.

TOWNSEND, JOHN, founder of the Deaf and Dumb Asylum in St. George's Fields, London, was born in the metropolis 1757, and became minister to an independent congregation, first at Kingston in Surrey, and afterwards at Bermondsey. The Rev. H. C. Mason, vicar of the latter parish, was his coadjutor in founding the asylum, for which a patron was found in the person of the late duke of Gloucester. They also worked together on the 'Family Bible,' known by the name of Mason's. Mr. Townsend died in 1826.

TOWNSEND, JOSEPH, a minister of the Church of England, educated as a physician under Dr. Cullen at Edinburgh. He was first interested in religion by the movement of the Wesleyans, and for some time acted as chaplain to Lady Huntingdon, and preached in her chapel at Bath; after which he obtained the living of Pewsey. He wrote several works, and died 1816.

TOWNSON, T., a learned divine, 1715 1792.

TOWSTON, W., an English traveller, 16th ct.

TOZER, H., a puritan divine, 1602-1650.

TOZZETTI, G. T., an Ital. botanist, 1722-1780.

TOZZI, LUKE, an Italian physician, 1638-1717.

TRACY, ANTHONY LOUIS CLAUDE DESTUTT DE, a French moralist and politician, 1754-1836.

TRACY, BERNARD DESTUTT DE, an ecclesiastic and ascetic writer, 1720-1786.

TRADESCANT, JOHN, a Dutch naturalist and Asiatic traveller, gardener to Charles I., died about 1652. His son, of the same name, author of a description of his father's curiosities, died about 1662. The latter bequeathed his father's museum to Elias Ashmole, who gave it to the university of Oxford. The Tradescants introduced many new plants into this country.

TRAETTA, T., an Italian composer, 1727-79.

TRAHERON, B., a learned divine, 16th cent.

TRAILL, ROBERT, a presbyterian minister, author of works highly esteemed among the Calvinists, born at Ely, in Fifeshire, 1642, died 1716. His son, ROBERT, was a minister in the county of Angus. JAMES, son of the latter, became an episcopalian, and was appointed, in 1765, bishop of Down and Connor; died 1783.

TRAJAN, one of the most illustrious emperors of Rome, was born near Seville, in Spain, in the year 53, and was adopted by Nerva in 97. The custom of adoption, when the choice was happily made, prevented the dangers incident to an interregnum, and, in this instance, only three months intervened between that expedient and the accession of the new Cæsar. It is singular that Trajan was no connection or friend of Nerva's, but was chosen by him solely for his well-known virtues, his fine military spirit, and his general fitness for command; and so well had Rome reason to be satisfied with this choice, that the virtues of the new emperor remained, for ages after his time, proverbial. The great victories of Trajan were obtained over the Dacians, Germans, and Parthians, and it was to commemorate the first of these that his famous column was erected; imitated in our own times by that of Napoleon. By these victories he fixed securely the boundaries of the Roman empire on the banks of the Rhine and the Tigris. His internal administration was equally glorious, his reign being numbered with that of his successor, Hadrian, and with the period of the two Antonines, for its great clemency, and rigid discipline of justice—these virtues being ever inseparable. Among his benefactions may be mentioned the humane and legal mode of dealing with the Christians which he enjoined in his rescript to Pliny, appointed by him proconsul of Bithynia and Pontus. Trajan died at Selinus, a town in Cilicia, in August, 117. [E.R.]

TRALLES, B. L., a Polish physician, 1708-97.

TRALLIANUS. See ALEXANDER.

TRAPP, JOHN, a minister of the Church of England, author of Commentaries on all the books of Scripture, 1601-1669.

TRAPP, JOSEPH, commonly called Dr. Trapp, grandson of the preceding, and rector of Harlington, author of several learned works in divinity and polite literature, 1679-1747. See LAW.

TRAVASA, CAJETAN M., an Italian theatine, preacher, and historian, 1698-1774.

TRAVERS, N., a French priest, 1686-1750.

TRAVIS, G., an English divine, died 1797.

TREBY, SIR GEORGE, a celebrated judge and lawyer, period of the revolution, 1644-1702.

TREDGOLD, T., a civil engineer, died 1

TREIBER, J. P., a Ger. jurisconsult, 167

TREILHARD, J. B., Count, a French and deputy to the estates-general, 1742-18

TRELLON, C., a French poet, 16th cen

TREMBECKI, a Polish poet, died 1812.

TREMBLEY, ABRAHAM, an eminent na and religious writer of Geneva, 1700-1784.

TREMELLIUS, EMMANUEL, son of a Ferrara, professor of Hebrew at Heidelber author of a version of the Bible, 1510-1580.

TRENCHARD, SIR JOHN, a member of ment and statesman, who was implicated Rye-house plot and the rebellion of Mon 1650-1695. JOHN, of the same family, a p writer, of the Whig party, author of 'The N History of Superstition,' 1669-1723.

TRENCK, FREDERICK, Baron Von Der, brated commander in the Austrian war of s sion, was born at Reggio, of a noble Polish fa in 1711. His military career commenced 1738, when he entered the service of Russia 1740 he joined the Austrians, and became ch the *Pandours*. His cruel and rapacious con created him many enemies, and being thrown prison, he poisoned himself, after four years' finement, in 1749. FREDERICK, his cousin, thor of the celebrated *Memoirs*, was born in 1 and entered the Prussian service under Fred II. He was imprisoned in a dark undergr cell at Magdeburg for ten years, and at last ished by the guillotine in France, 1794. M ICE FLAVIUS, of the same family, was a w on public law, and died 1810.

TRENEUIL, J., a French poet, 1763-1818.

TRENTA, P., an Italian poet, 1731-1795.

TRENTO, J., an Italian Jesuit, 1728-1784.

TRESCHOW, NIELS, a Norwegian philosop and theologian, author of 'The Spirit of Chri anity,' and the 'Philosophical Testament, or G Nature, and Revelation,' 1751-1833.

TRESHAM, H., an Irish poet, died 1814.

TRESSAN, LOUIS ELIZABETH DE LA VE GNE, Count De, a French officer and member the Academy, author of a translation of Orla Furioso, and other works, 1705-1783. His s the ABBE DE TRESSAN, a writer, 1749-1809.

TRESSAN, PETER DE LA VERGNE DE, a m sionary, born in Languedoc 1618, died 1684.

TREUER, G. S., a Germ. publicist, 1683-17

TREUTLER, J., a German jurist, 1565-160

TREUVE, S. M., a Fr. theologian, 1651-17

TREVISANI, FRANCESCO, an Italian painte taught by Antonio Zanchi, 1656-1746. Anot his brother, a portrait painter, dates unknown.

TREVISANI, M. A., a Venetian doge, 1553-

TREW, C. J., a German botanist, 1695-176

TRIBOLO, N. DI, an Ital. sculptor, 1500-15

TRIBONIAN, a celebrated Roman jurist, w was employed by Justinian on the famous digest the laws, died about 546. Tribonian bears a v indifferent character; a brief account of the gr work on which he was engaged may be seen the article JUSTINIAN.

TRICALET, P. J., an ascetic writer, 1696-17

TRICHET-DUFRESNE, RAPHAEL, a Fre bibliopole and numismatist, 1611-1661.

TRIER, J. P., a Germ. theologian, 1687-17

ese, and was afterwards

matched against our own Admiral Blake; it was Tromp who sailed up the channel with a broom at his masthead, protesting he would sweep the English from the seas. He was killed in an action off the Dutch coast, 29th July, 1653. His son, CORNELIUS VAN TROMP, born 1629, displayed extraordinary courage and skill in his contests with the English, and died peaceably at Amsterdam in 1691. Some particulars will be found under the name of RUYTER, his fellow-commander.

TRONCHAY, G. DU, a Fr. writer, 1540-1582.

TRONCHET, F. D., a Fr. jurist, 1726-1806.

TRONCHIN, THEODORE, a protestant theologian of Geneva, 1582-1657. LEWIS, his son and successor as professor of divinity, died 1705. N. DUBREUIL, of the same family, a journalist, died in Holland, 1640-1721.

TRONCHIN, THEODORE, an eminent physician of the same family as the preceding, and a relative, by the mother's side, of Lord Bolingbroke, a great promoter of inoculation in France, 1709-1781. His relative, JOHN ROBERT, a jurisconsult, and writer against Rousseau, 1711-1793.

TROOST, C., a Dutch painter, 1697-1750.

TROWBRIDGE, SIR EDWARD T., a distinguished British admiral, died 1852.

TROWBRIDGE, SIR THOMAS, a naval officer distinguished in the last war, supposed to have perished at sea in the *Blenheim*, 1807.

TROSK, M., a German Orientalist, 1588-1636.

TROTTER, THOMAS, a physician in the royal navy, known as a professional and medical writer, born in Roxburghshire, died 1832.

TROTTI, J. P. B., an Ital. painter, 1555-1602.

TROTZ, C. H., a Ger. jurisconsult, 1701-1773.

TROY, FRANCIS DE, a Fr. painter, 1645-1730. His son, same name and profession, 1676-1752.

TRUBLET, N. C. J., a Fr. writer, 1697-1770.

TRUCHET, JOHN, a French monk, famous as an engineer and man of science, 1657-1729.

TRUEBA, DON TELESFORO DE, a Spanish constitutionalist, who took refuge in England and became known as a dramatist, died 1835.

TRUMAN, J., a nonconfor. divine, 1631-1671.

TRUMBULL, JOHN, an American lawyer and poet, born in Connecticut, 1750; died 1831. JONATHAN, his son, secretary to Washington, and member of Congress, 1740-1809. JOHN, brother of the latter, a painter of history, some of whose productions adorn the capital at Washington, 1756-1843.

TRUMBULL, SIR WILLIAM, a statesman and diplomatist, time of James II. and William III., well known as the friend and literary confidant of Dryden and Pope, 1638-1716.

TRUSLER, J., a literary compiler, 1735-1820.

TRYPHIODORUS, a Greek poet and grammarian, time of Anastasius, 6th century.

TRYPHO, a Syrian usurper between Antiochus VI. and Antiochus VII., B.C. 140-134.

TSCHARNER, BERNARD, a Swiss historian, died 1778. His brother, N. EMMANUEL, 1723-94.

TSCHERNING, ANDREW, a Prussian poet and philologist, 1611-1659.

TSCHIRNER, HENRY THEOPHILUS, professor of theology at Wittemberg, an eloquent preacher, and author of several works, 1778-1828.

TSCHIRNHAUSEN, E. W. VON, a learned

German, distinguished for his discoveries in the art of manufacturing lenses and burning mirrors, and founder of the manufacture of porcelain in Saxony, 1651-1708.

TSCHOULBOF, M. D., secretary to the Russian senate and an historical writer, died 1793.

TSCHUDI, GILLES, in Latin *Ægidius Tscudus*, a Swiss historian and teacher of Zuinglius, 1505-1572. DOMINIQUE, his brother, an ecclesiastic and historian, 1596-1654. J. HENRY, also an historian, 1670-1729.

TUAIRE, F., a French painter, 1794-1828.

TUBI, J. B., an Italian sculptor, 1630-1700.

TUCKER, ABRAHAM, the son of a London merchant, who was educated for the bar, and became known as a metaphysical writer. His principal work, entitled 'The Light of Nature Pursued,' was published under the fictitious name of Edward Search in 1765; flourished 1705-1774.

TUCKER, JOSIAH, a dignitary of the Church of England, author of a 'Treatise on Civil Government' and 'Elements of Commerce,' 1712-1799.

TUCKER, ST. GEORGE, called 'the American Blackstone,' a distinguished lawyer and promoter of the independence of the United States, d. 1828.

TUCKER, W., a learned divine, died 1620.

TUCKEY, JAMES HENGSTON, an African explorer, au. of 'Maritime Geography,' 1776-1816.

TUCKNEY, A., a learned puritan, 1599-1670.

TUDWAY, T., a musical composer, 17th cent.

TUDOR. See OWAIN.

TUET, J. C. F., a Fr. philologist, 1742-1797.

TULL, J., an agricultural writer, 1680-1740.

TULLIA. See TARQUIN.

TULLIN, C. B., a Norwegian histor., 1728-65.

TULLIUS HOSTILIUS, successor of Numa Pompilius as king of Rome, B.C. 673-641.

TULLY, GEORGE, rector of Gateside near Newcastle, and a famous writer against popery, died 1697. His uncle, THOMAS, a learned divine and controversial writer, 1620-1676.

TULP, NICHOLAS, a Dutch physician who became burgomaster, and greatly disting. himself by his patriotic resistance to Louis XIV., 1594-1674.

TUNSTALL, or TONSTAL, CUTHBERT, a famous English prelate, uncle of Bernard Gilpin, was born near Richmond, in Yorkshire, about 1474. In 1516 he accompanied Sir Thomas More as ambassador to Charles V., after which he became successively bishop of London and Durham. He was imprisoned in the Tower during the reign of Edward VI., and though he had shown a humane regard for the persons of protestants in the reign of Mary, he was deprived of his liberty again in that of Elizabeth. His keeper, however, was Archbishop Parker, who entertained him in a friendly manner at Lambeth, where he died in 1559.

TUNSTALL, JAMES, vicar of Rochdale, author of 'Discourses upon Natural and Revealed Religion,' and some classical commentaries, 1710-72.

TURA, COSMO, an Italian painter, 1406-1469.

TURBERVILLE, GEORGE, a poet and translator of Ovid, born at Whitchurch, in Devonshire, about 1530, died about 1600. His poetical description of Russia was founded on the knowledge he obtained of that country as secretary to the English ambassador, Sir Thomas Randolph.

TURCHI, ALESSANDRO, an Italian painter, taught by Brusasorci, about 1580-1650.

TURCHI, L., bishop of Parma, 17

TURENNE. Dr. Turner was a man of the most amiable disposition, and of acute scientific talents. [R.D.T.]

TURNER, J. H., an archæologist, 1814-1851.

[Birth-place of Turner.]

TURNER, Joseph Mallerd William, was born in Maiden Lane, Covent Garden, in the spring of 1775. His father carried on a small business as a hair-dresser; and it was over his father's shop in Maiden Lane where most of his early efforts, in the art in which he eventually became so famous, were produced. His abilities appear to have been rapidly developed, for though unaided by instruction from any master, he obtained admission as a student into the Royal Academy in 1789, in only his fifteenth year, and was an exhibitor in the academy the following year, 1790. In his early youth, Girtin, the water-colour painter, appears to have been Turner's chief adviser, who always expressed a high veneration for his friend's ability. Turner had also the very great advantage of freely copying in the Gallery, or from the collection of drawings of Dr. Munro in the Adelphi; and his elaborate drawings soon procured a public recognition of his talents: he was elected an associate of the Royal Academy in 1800, and an academician in 1802. He was thus for fifty years one of the most distinguished members of that institution; and after a life of almost unrivalled success, and an industry unsurpassed, this great landscape painter died unmarried, and under an assumed name, in an obscure lodging at Chelsea, 19th December, 1851. He was, however, buried by the side of Sir Joshua Reynolds, in the crypt of St. Paul's Cathedral.—His life was in every sense a remarkable one; for its humble origin, and for its splendid results; retired and reserved always while living, the splendour of his fame among his contemporaries does not contrast more strongly with his habits of life, than the great and national character henceforth identified with his name, both by his reputation and the disposition of his property, does with the singular humility of his closing career. His large fortune,

both in pictures and in funded property, he has bequeathed to the nation; his pictures, however, under the condition that the government provide a suitable dwelling for them within ten years, and his funded property towards the establishment of an institution for the benefit of decayed artists. Turner had three styles as a landscape painter, and as the history of every distinguished painter will show, his first manner was much distinguished for laborious care in execution: he was chiefly a water-colour painter in early life. The contrast of style between his early and latest works is remarkable—the latter distinguished for its excessive looseness of execution, the former for its elaborate finish; and, compared with his ordinary works, for a coldness of colour. This peculiar coldness of colour he displayed both in his oil and water-colour pictures; and in some of the best of his early works, he shows a decided imitation of Wilson. In middle life he adopted a much freer mode of execution, and a greatly richer style of colouring. His finest works belong to this middle period, of which the two pictures bequeathed by him to the National Gallery, to be hung between two Claudes, are fine examples: the sun rising in a mist, exhibited in 1807; and Dido building Carthage, exhibited in 1815. Turner may be judged by these works, as he himself considered them two of his principal masterpieces; and the self-assertion of insisting upon their being exhibited by the side of the Claudes, shows that he courted, and required no indulgence from, our criticism. In comparison with Claude his execution is loose, even in his middle period; but these two pictures do not suffer more by the comparison than the Claudes—both are injured, as they are nearly in opposite extremes of taste; the Turners require some of his own later works as a foil, and in this case the two bequests might display the happy medium of execution. The majority of Turner's works of this middle period are certainly masterly and brilliant in colour. In the last twenty years of his career he was extravagant to an extreme degree: he played equally with nature and with his colours: although we could not see such effects in nature as he latterly represented, he maintained that we should be glad to see them, nevertheless. Light, with all its prismatic varieties, seemed to have been the chief object of his studies; individuality of form or character he was wholly indifferent to. The wild looseness of execution in Turner's latest works has not the apology of being attempted on scientific principles; he does not work up a particular point of the picture as a focus, and leave the rest obscure, as a foil, to enhance it: but all is equally obscure and wild. But were it otherwise, the philosophy would be very questionable: the infinite advantage of the human eye over instruments made by man is, that it can instantly adapt its focus to any object, and thus distinguish, within a limited range, the distant or the near equally well. It is this faculty of the eye which makes the natural landscape so charming; and, accordingly, nature also requires that the landscape which professes to be its transcript should be finished in all its parts, and thus enable the eye to exercise its wonderful functions over it as it does over a natural scene. Turner's works are very numerous in all his styles: he exhibited about 300 pictures in the Royal Academy, however, constitute but a very small portio works. In 1808 he published a work calle *Studiorum*, or Book of Sketches, in imit Claude's *Liber Veritatis*.—(John Burnet, *and his Works*, &c., 1852.)

TURNER, SAMUEL, a diplomatist of th India government time of Hastings, autho account of his embassy to Thibet, 1749-18

TURNER, SHARON, a solicitor of L whose works on Anglo-Saxon history an other subjects, are reckoned among the sta of English literature, 1768-1847.

TURNER, THOMAS, chaplain to Laud, of London, and finally dean of Canterbury, 1672. FRANCIS, his son, bishop of Ely, the seven prelates committed to the To James II., author of a 'Vindication of Arch Sancroft,' 'Animadversions on a Pamphlet e the Naked Truth,' and other works, died 17

TURNER, WILLIAM, rector of Walber Sussex, au. of a 'History of All Religions,'

TURNER, WILLIAM, a dignitary of the c who wrote the earliest English herbal, enti 'History of Plants,' died 1568.

TURPIN, TULPIN, or TELPIN, Jo Lat. *Turpinus*, a Fr. prelate and chronicler,

TURPIN, F. H., a French historian, 1709-

TURPIN DE CRISSE, LANCELOT, Co French officer and writer on tactics, 1715-17

TURRETIN, BENEDICT, a Swiss pre theologian, 1588-1631. His son, FRANCIS, fessor at Geneva and a theological writer, 1687. JOHN ALPHONSUS, son of the latte the most celebrated ecclesiastical writer and t gian of the family, 1671-1737. Of the same were—MICHAEL, professor of divinity, 1646- SAMUEL, son of Michael, professor of theolog Oriental languages, 1688-1718.

TUSSAUD, MADAME, the famous wax-mo and proprietress of the exhibition in London, born in Berne 1760. She came to Lond 1802, and died there in 1850.

TUSSER, THOMAS, a poet, called by W 'The British Varro,' born in Essex about died in London between 1580 and 1585. principal work is quaintly entitled, 'Five Hun Points of Good Husbandry vnited to as many Good Huswiferie.'

TUTCHIN, J., a political writer, died 170

TUTILO, or TUOTILO, a monk of St. G Switzerland, distinguished as a painter, sculp orator, poet, and musician, 9th century.

TWEDDELL, JOHN, an accomplished sch and traveller, born in Northumberland 1769, prematurely at Athens 1799.

TWELLO, L., a learned divine, died 1742.

TWINING, T., a classical scholar who was sented to the living of St. Mary's, Colchester, Bishop Lowth, born in London 1734, died 180

TWINING, W., an army physician and ge sional writer, born in Nova Scotia, died 185

TWISS, HORACE, a barrister and miscellane writer, was the son of Francis Twiss, known man of letters, and of Frances, second daughte Roger Kemble, the father of that celebrated fam He was called to the bar in 1811, and ente parliament as member for Wootton Basset, in 18 in 1828, he was under-secretary for the colo

ing the administration of Wellington. He
er obtained much success in political life, but
highly esteemed in the social and literary
le. The principal of his works is a 'Life of
d Eldon.' Died 1849.

WISS, RICHARD, a traveller of fortune, known
miscellaneous writer, 1747-1821.

WISS, W., a nonconformist divine, 17th cent.

WYNE, JOHN, an antiquarian and mayor of
terbury, died 1581. His grandson, BRIAN, an
quarian, was vicar of Rye, in Sussex, and
rist at Oxford, 1579-1644.

WYSDEN, SIR R., an antiquary, 1597-1672.

YCHSEN, O. G., professor at Rostock, and
hor of several Oriental works, 1734-1815.

YCHSEN, T. C., an Orientalist, 1758-1834.

YDEMAN, M., a Dutch *savant*, 1741-1825.

YE, C., a musical composer, 16th century.

YERS, T., an English critic, 1726-1787.

YMPE, J. G., a Ger. theologian, 1699-1768.

YNDALE, or TINDALE, WILLIAM, the
rable martyr and translator, was born in the
lred of Berkeley, either at Stinchcomb, or
h Nibley, Gloucestershire, about the year
. At an early period he was sent to Oxford,
e he took his degree, and also gave instruc-
in Magdalen Hall. But he left Oxford for
ridge, where it is believed that he took a

At Cologne Tyndale seems to have com-
print his first edition in 4to, but after
were printed the work was interrupted,
ranslator and his coadjutors betook
to the Lutheran city of Worms, where
was finished, and an octavo edition
from the press. The prologue to the
been republished under the name of
to the Scriptures.' The translator's
name was attached to neither of the two editions, and he assigns a reason for this omission in his 'Wicked Mammon,' published in 1527. Copies of these versions early found their way into England. In 1526 Tunstall, bishop of London, fulminated his prohibition of them, and two years afterwards a number of copies were collected, nay, some were purchased by the bishop in Antwerp, and burnt at St. Paul's Cross. Warham and Wolsey were also dreadfully enraged, and Sir Thomas More was employed to denounce Tyndale, but his genius was foiled in the attempt, and Tyndale won a precious victory over the learned chancellor. Two editions were then printed at Antwerp, and found their way to England in vessels laden with grain. Endeavours were made to seize Tyndale and punish all who assisted him, but he removed to Marburg in Hesse in 1528, and published there a book of great value—'The Obedience of a Christian Man.' The result of all the English opposition was, that, as Foxe expresses it, 'copies of the New Testament came thick and threefold into England.' We find Tyndale again at Antwerp in 1529, during which year a fifth edition was printed; the four books of Moses were also translated, printed each at a separate press, and put into circulation. The enemies of the translator endeavoured to decoy him into England, but he was too wary to be so easily entrapped, for he well knew what displeasure Henry VIII. felt at his tract, called 'The Practice of Prelates,' and what penalty the royal indignation would speedily inflict. After the martyrdom of Frith, Tyndale set himself to revise and correct the version of the New Testament, and it was soon thrown off, with this remark in the preface, 'which I have looked over again with all diligence, and compared with the Greek, and have weded out of it many fautes.' But his enemies in England, whose power had been shaken by the copious circulation of the English New Testament, were the more enraged against him, and conspired to seize him on the continent, in the name of the emperor. An Englishman, named Philips, betrayed him, and acting under such information, the authorities at Brussels seized him, in the house of Pointz his friend, and conveyed him to Vilvorde, twenty-three miles from Antwerp. Pointz, who had with difficulty escaped himself, made every effort for him, but in vain. The neighbouring university of Louvain thirsted for his blood. Tyndale was speedily condemned, and on Friday, the 6th October, 1536, in virtue of a recent Augsburg decree, he was led out to the scene of execution. On being fastened to the stake, he cried in loud and earnest prayer, 'Lord, open the eyes of the king of England,' and then was first strangled and afterwards burnt.

His ashes flew,
No marble tells us whither.

The merits of Tyndale must ever be recognized and honoured by all who enjoy the English Bible—for their authorized version of the New Testament has his for its basis. He made good his early boast, that ploughboys should have the Word of God. His friends all speak of his great simplicity of heart, and commend his abstemious habits, his zeal, and his industry; while even the imperial procurator who prosecuted him styles him, *homo doctus, pius et bonus*. The works of Tyndale and

Frith were collected and published in three vols. 8vo, London, 1831. [J.E.]

TYPOEST, JAMES, in Latin *Typotius*, a Flemish historian, died 1601.

TYRANNIO, a Gr. grammarian, 1st cent. B.C.

TYRCONNEL, RICHARD TALBOT, earl of, a partizan of James II. in Ireland.

TYRRELL, JAMES, a barrister of the Temple, au. of a 'General History of England,' 1642-1718.

TYRTÆUS, a Greek poet and musician, whose military songs and airs animated the Spartan army, and were constantly sung and played as long as that republic existed, 7th century B.C.

TYRWHITT, THOMAS, a famous scholar and master of polite literature, was born at Westminster in 1730, and was successively under-secretary at war and clerk to the House of Commons. He resigned the latter situation in 1768, and devoted his future years to literature. Besides his valuable classic commentaries, Tyrwhitt edited Chaucer's Canterbury Tales and Rowley's Poems, which he proved to be the production of Chatterton; d. 1786.

TYSON, EDWARD, a physician and writer of curious works in comparative anatomy, 1649-1708.

TYSON, JAMES, a dramatic writer, 1799-1820.

TYSSEUS, PETER, a Flemish historical painter, 1625-1692. His son, NICHOLAS, famous for the representation of still life, flowers, fruit, armour, and military weapons, 1660-1719. AUGUSTUS, br. of the latter, a landscape painter, 1662-1722.

TYTLER, H. W., a Scotch physic., 1752-1808.

TYTLER, JAMES, born at Brechin, in Scotland, 1747, celebrated as a miscellaneous writer, and editor of several periodical works. Died in America, where he became a political exile, 1805.

TYTLER, WILLIAM, a Scottish antiquarian and historical writer, was born at Edinburgh 1711, and became a writer to the signet, in which profession he continued till his death in 1792. His principal works are 'An Historical and Critical Inquiry into the Evidence produced against Mary Queen of Scots,' a 'Dissertation on the Marriage of Mary to Bothwell,' and the 'Poetical Remains and Life of James I., king of Scotland.' His son, ALEXANDER FRASER, Lord Woodhouselee, was successively professor of history, judge advocate, and justice of the Court of Session. He is the author of several much valued historical and critical works, the principal of which is his 'Elements of General History,' 1747-1813. The son of the latter, PATRICK FRASER TYTLER, the most eminent of the family, was born in 1790, and died after a lingering illness in 1849. His principal work is a 'History of Scotland,' in 9 vols., published at intervals from 1828 to 1843. Besides this contribution to historical literature he wrote a 'Life of the Admirable Crichton;' 'The Life and Writings of Sir Thomas Craig;' 'Lives of Scottish Worthies;' a 'History of Discovery on the Northern Coasts of America;' a 'Life of Sir Walter Raleigh;' and a 'Life of Henry VIII.' In the latter years of his life he enjoyed a pension of £200 a-year, for which he was indebted to the administration of Sir Robert Peel.

TZETZES, JOHN or JOANNES, a learned grammarian and poet of Constantinople, author of a valuable work entitled, Chiliades Variarum Historiarum, or Historical Miscellanies, 12th century. His brother, ISAAC, was also a man of taste and letters, and held a magisterial office in Macedonia.

TZETZI, J. B., a learned writer, 16th century.

TZSCHIRNER. See TSCHIRNER.

U

UBALDI, G., a mathematician of the 17th cent.

UBALDINI, PETRUCCIO, an illuminator of Florence, who came to England in the reign of Elizabeth as a teacher of his native language, and wrote several historical works, from 1550-1588.

UBALDINI, ROGER, archbishop of Pisa, in 1276, noted for his cruelty as a Ghibelline chief. Having captured Ugolino and his sons, of the opposite party, he shut them up in a room and left them to die of hunger.

UBERTO, F. DEGLI, an Ital. poet, died 1370.

UCCELLO, P., an Italian painter, 1349-1432.

UCHENSKI, J., primate of Poland, died 1581.

UDAL, JOHN, a rigid puritan and Oriental scholar, died in the Marshalsea prison, London, 1592. EPHRAIM, his son, vicar of St. Augustin's, Walling Street, a zealous royalist, author of a treatise against sacrilege, entitled 'A Coal from the Altar,' and other works, died 1647.

UDAL, NICHOLAS, master of Westminster school, author of several works, 1506-1564.

UDALRIC, duke of Bohemia, 1012-1037.

UDEN, L. VAN, a Flemish painter, 1595-1662.

UDINA, GIOVANNI DA, an Italian painter, taught by Giorgione and Raphael, 1489-1562.

UFFEMBACH, or UFFENBACH, Z. C. VON, a learned German bibliographer, 1683-1734. His brother, JOHN FREDERIC, a lyric poet, 1687-1769. PETER, a physician, died 1635.

UGGERI, A., an Italian antiquary, 1754-1837.

UGGIONE, M., an Italian painter, died 1520.

UGHELLI, F., an eccles. historian, 1595-1670.

UGOLINO. See GHERARDESCA.

UHLICH, G., an Austrian historian, 1748-1794.

UILKENS, JAMES ALBERT, a Dutch naturalist and theologian, professor at Groningen, 1773-1825.

UITENBOGAARD, J., a Dutch theologian of the party of Remonstrants, 1557-1650.

ULADISLAS, seven kings of Poland:—ULADISLAS I., duke or king, succeeded his brother, Boleslas, in 1081 or 1082; his reign was troubled with civil and foreign wars, died 1102 or 1103. ULADISLAS II., succeeded his father, Boleslas III., in 1138 or 1139; he was deposed 1146, and died in exile 1159. ULADISLAS III., was elected king 1202, and deposed in 1206 on account of his cruelties, died 1233. ULADISLAS IV., surnamed LOKETEK, became master of the kingdom in 1296, was deposed by the states, and Wenceslaus elected in his room, 1300, but was restored on the death of the latter in 1305 or 1306. He sustained a war with the Teutonic knights, and died 1333. His son, Casimir III., called *the Great*, succeeded him. ULADISLAS V., grand duke of Lithuania, obtained the crown by marrying Hedwiga, daughter of Louis. See JAGELLON. He was succeeded by his son, Casimir IV. ULADISLAS VI. son of Casimir IV., same as LADISLAUS VI., king of

Hungary; see that article. ULADISLAS VII., son of Sigismond, was born 1595, and succeeded his father 1632. He had previously sustained a war with the house of Romanoff, and now in 1633-4 he conquered the Turks and the Tartars of the Crimea. Died 1648.

ULADISLAS, three dukes or kings of Bohemia:—ULADISLAS I., reigned 1109-1125. ULADISLAS II., succeeded 1140, deposed and died in the same year, 1173. ULADISLAS III., reigned only a few months in 1198, and died 1222. The sixth king of Hungary and Poland of this name, became king of Bohemia in 1471. See LADISLAUS.

ULDIN, a king of the Huns, 400-412.

ULEFELD, CORNIFIX or CORFITO, Count, a Danish statesman time of Christiern VI., d. 1664.

ULFT, J. VANDER, a Dutch painter, 1627-80.

ULLOA, A. DE, a Spanish historian, d. 1580.

ULLOA, ANTONIO DE, a Spanish general and statesman, a great promoter of industrial and scientific progress in that country, 1718-1795. Ulloa's great distinction was in the mathematical sciences; and when very young he was sent to South America to co-operate with Condamine and the other French academicians in measuring a degree of the meridian. His talents, more lately, were turned to account in the construction of public works requiring engineering skill, the introduction of the woollen manufacture, &c.

ULLOA Y PEREIRA, LOUIS DE, a Spanish poet, time of Philip IV., died 1660.

ULPHILAS, a Gothic bishop, known to history about 375 as a delegate to the emperor Valens, from whom he solicited a settlement in Thrace for his countrymen. He is said to have translated the Bible into the Gothic language, and to have invented the characters for that purpose.

ULPIAN, a rhetorician of Antioch, 4th cent.

ULPIANUS, DOMITIUS, a famous jurist of Rome, who became the chief minister of his pupil, the emperor Alexander Severus, in the year 222. He is said to have been a resolute enemy of the Christians; and having effected some reforms in the army, he was murdered by the soldiers at the feet of the emperor and his mother, 228.

ULRIC, PHILIP ADAM, a native of the bishopric of Wurtzbourg, a teacher of jurisprudence and promoter of agriculture improvements, born 1692.

ULRICA, ELEANORA, two queens of Sweden. 1. The wife of Charles XI., and mother of Charles XII., was born in 1656: her father was Frederick III. of Denmark, and her marriage with the Swedish king in 1679 facilitated the establishment of peace between the two countries. She died in 1693. She was remarkable for her great learning and beneficent disposition. 2. The daughter of the preceding, born 1688, succeeded her brother, Charles XII., as queen regnant in 1719, four years after her marriage with prince Frederick of Hesse Cassel. In 1720, she resigned the government into the hands of her husband. Died 1744.

ULRICH, J. H., a Ger. philosopher, died 1813.

ULRICH, JOHN JAMES, a Swiss theologian, 1569-1638. Another of the same names, professor of moral philosophy and natural law, and an ecclesiastical writer, 1683-1731. JOHN GASPARD, an ecclesiastic, author of a curious history of the Swiss Jews, 1705-1768. JOHN RODOLPH, a minister and author of ascetic works, 1728-1795.

ULUGH BEGH, a prince of the Tartars, grandson of the famous Tamerlane, was born in 1394, and succeeded his father on the throne, in 1447. He had been accustomed to the cares of government from his boyhood, and greatly distinguished himself as a patron of learning, and by his own astronomical observations, and works illustrating Eastern history and geography. His elder son having rebelled against him, caused him to be put to death near Samarcand in 1449 or 1450.

UNDERWOOD, T. R., an artist and naturalist, author of 'Memorable Events in Paris during the Capitulation of 1814,' died 1835.

UNGER, J. F., a Ger. economist, 1716-1781.

UNTERBERGER, IGNATIUS, a painter of a Tyrolese family that has produced many celebrated artists, born at Karales, 1744, died 1797.

UNZER, JOHN AUGUSTUS, a German physician, distinguished by his works on physiological and psychological subjects, among which may be mentioned 'A New Doctrine concerning the Movements of the Soul and the Imagination,' 'Thoughts on Sleep and Dreams,' 'On the Sensitive Faculties of Animated Bodies,' 'The Physiology of Animated Nature,' and 'Physiological Researches, 1727-1799. His wife, JANE CHARLOTTE, a poetess and moralist, died 1782.

UNZER, LOUIS AUGUSTUS, a German writer, au. of a 'Treatise on Chinese Gardens,' 1748-75.

UPHAM, W. E., an Eng. historian, died 1833.

UPTON, JAMES, a learned schoolmaster and divine of the Church of England, editor of classical works, 1670-1749. His son, JOHN, rector of Great Rissington, in Gloucestershire, also a classical editor, published an edition of Spenser's 'Faerie Queene,' and Notes on Shakspeare, 1707-1760.

URBAN, eight popes of Rome:—URBAN I., succeeded Calixtus I. in 222, and suffered martyrdom in 230. URBAN II., whose name was Otho or Eudes, a Frenchman, succeeded Victor III. in 1087 or 1088; he struggled against the pretensions of the emperor, and proclaimed the first crusade at the instance of Peter the Hermit, died 1099. URBAN III., reigned in the time of the emperor Frederic I., 1185-1187. URBAN IV., time of St. Louis, to whom he offered the crown of Sicily, which was accepted by the duke of Anjou, 1261-1265. He instituted the festival of Corpus Christi. URBAN V., succeeded Innocent VI. 1362, at the period when the papal court was held at Avignon (see RIENZI); he removed to Rome in 1367, but returned again in 1370, and died at Avignon the same year. URBAN VI., succeeded Gregory XI. in 1378, and became the abettor of Charles Durazzo against Joan of Naples, died after an unquiet pontificate 1389. URBAN VII., died the twelfth day after his election in September, 1590. URBAN VIII., successor of Gregory XV. in 1623, held the pontificate during a long and busy period marked by the disputes of Jansenism; died 1644.

URBAIN, FERDINAND DE ST., a French artist, and designer of medals to Innocent XI., 1654-1731.

URCEO, A., a learned Italian, 1446-1500.

URFE, ANNE D', a French poet, 1555-1621. HONORE, his brother, a novelist and historian of the gallantries of Henry IV., contained in his romance of Astræa, 1567-1625.

URQUHART, SIR THOMAS, a Scottish mathematician and philologist, time of Charles II.

URQUIJO, Don Marianno Luiz De, a Spanish statesman, time of King Joseph, 1768-1817.

URREA, J. De, a Spanish writer, 16th cent.

URRUTIA, J. De, a Span. general, 1728-1800.

URSIN, J. F., a Germ. philologist, 1735-1796.

URSIN, John Henry, ecclesiastical superintendent at Ratisbon, author of a 'Compendium of the Ecclesiastical History of Germany,' died 1667. George Henry, his son, a philologist and teacher of the *Belles Lettres*, 1647-1707.

URSINS, Anna Maria De La Tremoille, Princess Des, a celebrated name in Spanish history, was born in France about 1643. She was married in 1659 to the prince of Talleyrand Chalais, and in 1675 to the duke of Bracciano, chief of the Orsini family. After the death of the latter, she was attached to the court of Spain, and really governed the country during the early part of the reign of Philip V. In 1714, however, she was banished the kingdom, and subsequently kept house for the Pretender, James Stuart. Died 1722.

URSINS, J. Jouvenel Des. See Juvenal.

URSINUS, B., a Germ mathemat., 1587-1633.

URSINUS, Zachary, a German professor of divinity and friend of Melancthon, author of several works, some of which have been translated into English, and a man of high moral character, 1534-1577. A descendant of his, named Benjamin, was raised to the prelacy when Frederic I. assumed the title of king of Prussia in 1701. For others of the name see above (Ursin.)

URSULA, Saint, a virgin and martyr, supposed to have been a daughter of a British prince, and to have been put to death at Cologne at a date which varies from 384 to 463. There is a legend that 11,000 virgin martyrs suffered with her, which some have explained by supposing that she had a companion named *Undecimilla*. It is pretty certain, however, that many were put to death at the same time. She is regarded as the patroness of the Sorbonne.

URSUS, Nicholas Raymarus, a Danish astronomer, and rival of Tycho Brahe, died 1600.

URVILLE. See Dumont.

USHER, James, D.D., was born at Dublin, 4th January, 1580. Early destined for the ministry, he was entered a student in the university of Dublin, where he acquired a brilliant reputation as a scholar in Latin, Greek, Hebrew, and divinity. In this latter department, his unquenchable thirst for knowledge had led him into a course of reading far more extensive than what is commonly pursued even by enthusiastic students of theology—for during his residence at the university, he had not only read the works of all the most celebrated of modern theological writers—but even most of the fathers; and more especially he had gained so complete a mastery of the popish controversy, that at the age of eighteen, he entered the lists with a learned Jesuit who had given a general challenge to the protestants. With a reputation for learning so high, his promotion in the church was rapid. Having in 1601 obtained orders in the episcopal church, he was appointed Sunday preacher before the government at Christ's church, Dublin. In 1607 he was chosen professor of divinity in the university and chancellor of the cathedral of St. Patrick. He now entered on a career of authorship; and the first work he undertook being an historical dissertation on the government and discipline of the church, he made a tour through England with a view to prosecute some inquiries in the libraries of the two universities. His fame procured him a welcome reception in these venerable seats of learning. His treatise was published in London, 1610, and a copy of it having been presented by Archbishop Abbot to King James, that monarch, delighted with so powerful a defence of his favourite episcopacy, loaded the author with tokens of his royal approbation—raising him to the bishopric of Meath which was then vacant, and afterwards constituting him a privy councillor of Ireland. By the royal command, Usher went to reside some years in England to prosecute researches into the antiquity of the British churches, and during his residence there the archbishop of Armagh having died suddenly, he was elevated to the high position of primate of Ireland, in January, 1624. The results of his antiquarian researches were given to the world in 1632, when he published a rare collection of letters from ancient MSS., extending from the year 592 to 1180. Usher being a man of liberal sentiments as to church government, maintained a friendly correspondence with all the eminent men in the churches both of England and Scotland, and took a lively interest in the progress of the gospel throughout the world, by whatever church or instrumentality the truth was diffused. Being, in 1640, driven from his see by the rebellion, and stripped of all his property except his books, he sought an asylum in England. In 1648 he was summoned to the Isle of Wight, to aid the king in negotiating with the parliament respecting the introduction of a uniform system of episcopacy. He sketched out a middle scheme which obtained the warm approbation of his royal master as the best expedient to settle the differences. But the expectations of this good man were sadly disappointed. The Scottish people would not receive it, and the imprudent attempts to force it on their acceptance, gave rise to the religious wars of which Scotland was the theatre during the seventeenth century. Usher again came before the world in 1650 as an author by the publication of his celebrated 'Annals of the Old and New Testament.' Various other works issued from his industrious pen; and he was the author of the received chronology of the Bible. After a long and active life, distinguished by usefulness and adorned by works of piety, he died on 20th March, 1656. [R.J.]

USHER, James, of the same family as the distinguished prelate (preceding article), born of catholic parents in 1720, and known as a philosophical writer against Locke, died 1772.

USSIEUX, L. D', a Fr. agriculturist, 1747-1803.

USTARIZ, Gabriel, one of the leaders of the revolution in Spanish America, 1772-1814.

USTARIZ, Jerome, a Spanish economist, author of the 'Theory and Practice of Commerce and Navigation,' died about 1760.

USTERI, Leonard, a Swiss professor and promoter of educational reform, 1741-1789.

USUARD, a French hagiographer, 9th century.

UTENHOVIUS, or UYTTENOVE, Charles, a native of Ghent, who cultivated the muses in their classic languages, and wrote in defence of the reformed religion in England, about 1536-1600.

UVA, Benedetto Dell', an Italian ecclesiastic and writer of sacred poetry, 16th century.

UVEDALE, Robert, a classical scholar and botanist, born in London 1642. The date of his death is unknown, but he assisted Dryden in translating Plutarch's Lives. Another Uvedale translated the Memoirs of Philip de Comines.

UWINS, David, a physician and professional writer, whose attention was particularly directed to mental diseases; he had the courage also to adopt the principles of homœopathy, in favour of which he wrote his last pamphlet, 1780-1837.

UXELLES, Nicholas De Ble, Marquis D', a Fr. commander time of Louis XIV., 1652-1730.

UZ, John Peter, a Ger. scholar and poet, who filled several magisterial offices at Anspach, in Franconia, of which place he was a native, 1720-1796.

UZBEK, a khan of a portion of the people now governed by the emperor of Russia, since called, after his name, Uzbeks, 1305-1342.

UZES, Aldebert D', so named from his birth-place, bishop of Nismes, and one of the council which condemned the Albigenses, died 1180.

UZZANO, Nicolo D', a Florentine statesman, attached to the aristocracy and the Guelph party, succeeded Albizzi as chief of the republic, 1417, died 1432. After his death his political supporters became exiles from their country.

V

VACA DE GUZMAN, Joseph Maria, a Spanish poet, born in Grenada abt. 1745, d. 1805.

VACARIUS, an Italian civilian, who became professor of law at Oxford, 12th century.

VACCA, Alvar Nunez Cabeza De, a Spanish governor of Paraguay, transported to Africa for his avarice and cruelty in 1539.

VACCA, F., an Italian sculptor, 16th century.

VACCA BERLINGHIERI, Francis, a Spanish physician, 1732-1812. His son, Andrew, a surgeon, died at Pisa in 1726.

VACCARO, A., a painter of Naples, 1598-1670.

VACCHIERI, C. A., a Ger. histor., 1745-1807.

VACHET, B., a French missionary, 1641-1720.

VADDER, L. De, a Flem. painter, 1560-1623.

VADDERE, J. B., a Flem. historian, 1640-91.

VADE, John Joseph, a French play-writer and humorous poet, 1720-1757.

VADIANUS, the Latinized name of Joachim Von Watt, a German *savant*, 1484-1551.

VADIER, M. W. Alexis, a Jacobin of the French revolution, who took part in most of the violent scenes of that period, and was the accuser of Catharine Theos and her party. The last scene in which he acted, was the conspiracy of Babeuf; born in Languedoc 1735; died in exile 1828.

VAGA, Pierino Del, whose real name was Buonaccorsi, an Italian painter, 1500-1547.

VAHL, Martin, an excellent botanist, was born at Bergen in Norway, in 1749 or 50. He died in 1804. Vahl commenced his studies in natural history under Strom at Copenhagen. After two years he removed to Upsal, where he prosecuted his botanical studies under the great Linnæus, and became one of his most distinguished pupils. He found favour in the eyes of Mademoiselle Linné, but Linnæus, at that time in the zenith of his fame, did not consider a poor botanist a sufficient match for his daughter. In 1779 he became lecturer and demonstrator of botany in the garden at Copenhagen, and a few years afterwards filled the chairs of natural history and botany in the university of that town. He travelled under royal auspices and at the expense of his sovereign, through great portion of Europe and made an extensive collection of plants. Being provided with excellent introductions, he had free access to the libraries and museums of the various literati of the towns he visited. In London the rich herbarium of Sir Joseph Banks was open to him, and he had the privilege of examining the manuscripts of Banks's friend Dr. Solander. He taught botany with much success at Copenhagen, and has left behind him several excellent works which have established his reputation as a first-rate botanist. A genus of plants was dedicated to him by his contemporary Thunberg, under the name of Vahlia. [W.B.]

VAILLANT, Francis Le, son of the French consul at Paramibo, in Dutch Guiana, an eminent traveller and ornithologist, 1753-1824.

VAILLANT, G. H., a Latin poet, died 1678.

VAILLANT, Jean Foi, one of the greatest of European medallists, time of Colbert, the minister of Louis XIV., by whom he was employed on several important scientific missions, born at Beauvais 1632, died 1706. His son, Jean Francis Foi, was a physician, and cultivated the same branch of sciences as his father, 1665-1708.

VAILLANT, Sebastian, an able botanist, who became director and professor at the Jardin du Roi, in the reign of Louis XIV., 1669-1722. The principal work of Vaillant is his 'Botanicon Parisiense.' He is said to have taught the sexual system of plants.

VAILLANT, Walbrant, a French painter and engraver, 1623-1677. He taught three of his brothers who followed the same profession—Bernard, James, and Andrew, but the particular dates are unknown.

VAILLANT-DE-GUELLE, G., bishop of Orleans, a philologist and poet, died 1587.

VAISSETTE, J., a Fr. historian, 1685-1756.

VALADON, Zachariah, a French Capuchin and missionary who laboured in Asia Minor, and signalized himself by his devotion to the suffering people during the plague at Marseilles, born about 1680, died 1746.

VALARESSO, C., an Italian poet, 1700-1769.

VALARSACES, a king of Armenia, descended from Mithridates the Great, 150-127 B.C.

VALART, J., a French *savant*, 1698-1781.

VALAZE, Charles Eleanore Dufriche De, one of the Girondin leaders of the French revolution, born at Alençon, 1751; died by his own hand at the bar of Fouquier Tinville, where his party were condemned to the guillotine, May 31, 1793.

VALCARCEL, Joseph Anthony, a Spanish writer on agriculture, flourished about 1720-1792.

VALCARCEL, Pio Antonio, Count De Lunares, a learned Spanish antiquarian, 1740-1800.

VALCKENAER, Louis Caspar, professor of

Greek and archæology at Leyden, 1715-1785. His son, JAN, a statesman, 1759-1821.

VALDEMAR. See WALDEMAR.

VALDES, ANTHONY, a Spanish statesman, who in 1796 yielded his office to Emmanuel Godoi, about 1735-1811. CAYETANO, his nephew, a member of the Cortes 1822, executed 1826.

VALDES, F., a Spanish tactician, 16th century.

VALDES, VALDESSO, or VALDESIUS, JUAN, a Spanish controversialist and reformer, generally claimed by the Socinians, died 1540.

VALDES, L. DE, a Spanish painter, 1661-1724.

VALDEZ, J. M., a Spanish poet, died 1817.

VALDO, PETER, generally considered the founder of the *Vaudois* or *Waldenses*, a body of Christians who separated themselves from the Church of Rome in the twelfth century, was born at Vaux, in Dauphiny, on the banks of the Rhone. He acquired a large fortune by commercial pursuits at Lyons; and when he resolved to retire from business, not only devoted himself to the spiritual instruction of the poor, but distributed his goods among them, and in all respects treated them as his children or his brothers. The only version of the Bible in use at that time, was the Latin Vulgate, but Valdo, who was a learned as well as a benevolent man, translated the four Gospels into French, this being the first appearance of the Scriptures in any modern language. The possession of these books soon discovered to Valdo and his people that the church was never designed to be dependent on a priesthood, even for the administration of the sacraments; and his instruction, boldly followed by practice, became so obnoxious to the church, that he was first persecuted by the archbishop of Lyons, and at length anathematized by the pope. No longer safe at Lyons, Valdo and his friends took refuge in the mountains of Dauphiny and Piedmont; and there formed those communities which grew in peace, and flourished in rustic simplicity,—'pure as a flower amid Alpine snows.' From these mountain valleys the simple doctrine of Christianity flowed out in multiplied rivulets over all Europe; Provençe, Languedoc, Flanders, Germany,—one after the other tasted of the refreshing waters, until in course of ages they swelled to a flood that swept over all lands. Valdo is understood to have travelled in Picardy, teaching his reformation: he finally settled in Bohemia, where he died in 1179; the same year in which his tenets were condemned by a general council. [E.R.]

VALDORY, C., a French ascetic, 17th century.

VALDRIGI, T., an Italian jurist, 1761-1834.

VALENCIENNES, PETER HENRY, a French landscape painter, 1750-1819.

VALENS, FLAVIUS, emperor of Constantinople, son of a noble of Pannonia, was born in 328, and associated in the Roman empire with his brother, Valentinian I., who abandoned the East to him, 364. He embraced Arianism, and in 376 allowed the Goths, whom he had previously subjugated, to settle in Thrace. This warlike people, however, were provoked to take arms again, and having defeated the troops of Valens, they burnt the emperor in his tent, 378.

VALENS, JULIUS, a usurper of the Roman empire, proclaimed in the reign of Decius, and killed a few days afterwards in 251.

VALENS, PUBLIUS VALERIUS, a nephew of the preceding, killed by his soldiers 261.

VALENTIA, G., a Spanish ascetic, 1551-1598.

VALENTIA, P. DE, a Span. jurist, 1554-1620.

VALENTIN, L. A., a Fr. surgeon, 1736-1823.

VALENTIN, M., a French painter, 1600-1632.

VALENTIN, M. B., a Ger. natur., 1637-1726.

VALENTINE, B., an alchymist, 16th century.

VALENTINIAN, three emperors of Rome:—VALENTINIAN (FLAVIUS) I., elder brother of Valens, and son of Count Gratian, was born in Pannonia 321, and succeeded after the death of Jovian 364. He gave the Eastern empire to his brother, and having defeated the Alemanni and the Quadi, died in a fit of passion 375. VALENTINIAN (FLAVIUS) II., son and successor of the preceding, was proclaimed emperor by the troops, and his brother, Gratian, at once ceded Italy to him. The latter shortly after was vanquished by Maximus, and Valentinian would also have lost his throne but for the timely help of Theodosius, emperor of the East, who put Maximus to death, and left Valentinian master of the whole Western empire. He was strangled by order of his rebellious general, Arbogastes, 392. VALENTINIAN (PLACIDIUS) III., became emperor at the age of six in 425, under the regency of his mother, Placidia. He was assassinated in 455.

VALENTINIANUS, founder of the sect of Gnostics named *Valentinians*, was a native of Egypt, and became publicly known as a teacher of strange doctrines in 140, when he went to Rome. He was excommunicated 143, and died after boldly devoting himself to the spread of his tenets in Syria, 160.

VALENTYN, F., a Dutch missionary, 17th ct.

VALERA, D., a Spanish historian, 15th cent.

VALERIA, a Roman empress, daughter of Diocletian, and wife of Galerius Maximus, exiled and killed after his death, 315.

VALERIAN, PUBLIUS LICINIUS, a Roman emperor, born about 190, was proclaimed after the death of Gallus 253. He was defeated in the East by Sapor, king of Persia, and supposed to have been flayed alive, 260.

VALERIANO BOLZANI, PIERIO, in Latin *Valerianus*, a learned Italian, 1477-1558.

VALERIANUS. See VALERIAN.

VALERIUS, LUCAS, an Italian mathematician, called the Archimedes of his age, died 1618.

VALERIUS FLACCUS, CAIUS, author of a Latin poem, entitled Argonautics, 1st century.

VALERIUS MAXIMUS, a Roman historian, who was in Asia with Sextus Pompeius, A.D. 14, besides which nothing is known of him. His work contains many valuable anecdotes and examples of moral excellence, and was one of the earliest printed after the revival of letters.

VALERIUS PUBLICOLA, one of the founders of the Roman republic, 6th century B.C.

VALESIO, J. L., an Italian painter, 16th cent.

VALETTE, JEAN PARISOT DE LA, grand master of the order of St. John at Jerusalem, renowned for his defence of Malta in 1565, and founder of La Valette; died 1568.

VALETTE, SIMEON, whose proper name was FAGONS, a French mathematician, 1719-1801.

VALIERO, A., a Venetian annal., 1531-1606.

VALINCOUR, JEAN BAPTISTE DU TROUSSET DE, a miscellaneous French writer, 1653-1730.

VALLA, GIORGIO, an Italian professor of polite literature, known 1471-1486.

VALLA, J., a learned theologian, died 1790.

VALLA, LORENZO, a distinguished Latin scholar, and one of the revivers of literature in the 15th century, born at Rome 1406, died 1457.

VALLA, N., a French jurisconsult, 16th cent.

VALLANCY, CHARLES, an English officer in a corps of engineers engaged in the survey of Ireland, author of a 'Grammar and Dictionary of the Irish Language,' 1721-1812.

VALLE, PIETRO DELLA, surnamed *Il Pellegrino*, a famous traveller in the East, au. of an account of his travels, written in Italian, 1586-1652.

VALLEE, G., a French deist, hung 1574.

VALLEE, J. LA, a French writer, 1747-1816.

VALLI, E., an Italian physician, 1762-1816.

VALLIER, F. C., a French poet, 1703-1778.

VALLIERE, JEAN FLORENT DE, a French officer of artillery time of Louis XIV., 1667-1739. His son, JOSEPH FLORENT, 1717-1776.

VALLIERE, LOUISE FRANCOISE DE LA BAUME LA BLANC, Duchess De La, lady of honour to Henrietta of England, and mistress of Louis XIV., was born in Touraine 1644. She had two surviving children by the king, Mademoiselle de Blois and the count of Vermandois, the latter of whom was legitimated in 1667. She was abandoned for Madame de Montespan, and retired to the convent of Chaillot in 1671; died 1710. Her grand-nephew, LOUIS CÆSAR DE LA BAUME LE BLANC, Duc De La Valliere, was a celebrated bibliopole, flourished 1708-1780.

VALLISNERI, ANTONIO, an eminent Italian physician and naturalist, 1661-1730.

VALLOT, A., a French physician, 1594-1671.

VALLOTTI, F. ANTONIO, an Italian musician and chapel-master in Padua, 1697-1780.

VALMIKI, the most ancient and most celebrated of the epic poets of India, author of the *Ramayan*, translations of which were published in English and German at the beginning of the present century.

VALMONT DE BOMARE, JAMES CHRISTOPHER, a French naturalist, 1731-1807.

VALOIS, HENRY DE, in Latin *Valesius*, a learned philologist and critic, 1603-1676. ADRIAN, his brother, a philologist and historian, 1607-1692. CHARLES, son of the latter, an antiquarian writer and historian, 1671-1747.

VALOIS, L. LE, a French Jesuit, 1639-1700.

VALOIS, YVES, a French Jesuit, born 1694.

VALPERGA DE CALUSO, THOMAS DES, a mathematician, and Oriental scholar, 1737-1815.

VALPY, RICHARD, an eminent classical scholar and schoolmaster, born in Jersey 1754, died 1836. EDWARD, his brother, a classical editor and minister of the Church of England, died 1832.

VALSALVA, ANTONIO MARIA, an Italian physician and anatomical discoverer, 1666-1723.

VAN ACHEN, or AKEN, HANS, a German painter, dist. for his sacred subjects, 1552-1615.

VANBRUGH, SIR JOHN, was the grandson of a protestant refugee from the Netherlands, and the son of a wealthy sugar baker. He was probably born in 1666. We know very little as to the history of his youth, or as to the training which enabled him not only to become one of the most celebrated among English architects, but, also, in conjunction with Congreve, to prolong, in the beginning of the eighteenth century, the licentious cleverness that had characterized the comic drama in the reign of Charles II. He is said to have passed some years of his youth in France, and was afterwards, for a short time, an ensign in the army. His career as a dramatist belongs, like that of Wycherley, to a few of the earlier years of his manhood. Two or three of his six or seven plays deserve no record. The first of them, 'The Relapse,' appeared in 1697; and 'The Provoked Wife,' the best of the series, immediately afterwards. In 1706 his vigorous picture of rascality, called 'The Confederacy,' was brought out at the new theatre in the Haymarket, an unsuccessful speculation of Vanbrugh and Congreve. He left uncompleted, at his death, 'A Journey to London,' which was worked up by Colley Cibber into 'The Provoked Husband.' He had, previously to the opening of this theatre, become eminent as an architect, by designing the magnificent pile of Castle Howard; and Lord Carlisle, being then Deputy Earl Marshal, appointed Vanbrugh to be Clarencieux king-at-arms. The new herald's presumed ignorance of his science was indignantly complained of by his colleagues, and merrily jested at by himself. He was next chosen as the architect of Blenheim; and, in the execution of this charge, in the midst of annoyances which (though vexatious in themselves) were sometimes as comic as anything in his plays, he produced the noblest monument of his striking though heavy architectural style. He died in 1726, having been liked as a good-natured man, and having lived more decently than he wrote. [W.S.]

VANCE, G., an eminent surgeon, died 1837.

VANCEULEN, or VANKEULEN, LUDOLPH, a Dutch mathematician, who made a remarkable approximation to the true ratio which the circumference of a circle bears to its diameter, died at Leyden 1610.

VANCOUVER, GEORGE, the distinguished navigator, a pupil and successful imitator of Cook, entered the naval service in 1771, when only thirteen years old. He served as midshipman on Cook's second and third voyages, 1772-80. On his return home he was made lieutenant, and appointed to the Martin sloop; and was variously employed in the public service for eleven years. In 1791 he received a command for the prosecution of maritime discovery. He was made captain, and appointed to the ship Discovery, again fitted out for an expedition. A small armed vessel, the Chatham, 135 tons, Captain Broughton, sailed in company; and the two ships left Falmouth on the 1st April, 1791. The objects, as laid down in the instructions, were to receive from the Spaniards the surrender of the settlement at Nootka, to survey the N.W. coast of N. America northwards from lat. 30°, with a special view to water communications with the interior, which might facilitate the operations of the fur traders; to pass the winter in a survey of the Sandwich Islands; and, on the homeward voyage, to make a careful inspection of the western coast of South America. The first three objects were successfully accomplished; 9,000 miles of sea coast in North America were surveyed with scrupulous accuracy, after the manner of his great master, whose methods of preserving health also, he followed with

such success, that during his voyage of four years' duration, and through an arduous service, he lost but two men from both crews. The third object stated was but imperfectly attended to, owing to the lateness of the season, and the stormy character of the weather. On the outward voyage to the Sandwich Isles, however, Vancouver had carefully examined the south coast of Australia, and a part of the shores of New Zealand. During his stay also at the Sandwich Isles, the native chiefs held a convocation, at which, after a protracted and amicable discussion, it was resolved to place the islands under British protection. Four European nations were at this time known to them, and they were in a condition to judge which of the four was the most likely to be a disinterested and able protector. The result was no doubt owing to the respect and confidence which Vancouver inspired. The Discovery was safely brought into the Shannon on the 13th September, 1795. Her commander was now post-captain, the promotion having taken place the previous year. He was paid off on his return; and, henceforth, occupied himself in preparing an account of his voyage, with charts exhibiting his surveys. The labour, however, which he had bestowed on this great work had undermined his constitution, and brought about a premature end.—He died in May, 1798, before his work was finished; the printing had proceeded as far as the 408th page of the third vol., and the charts had all been completed some time before, under his own eye. The remaining part of the narrative was drawn up from his papers by his brother, JOHN. [J.B.]

VAN DALE, ANTHONY, a Dutch theologian and antiquarian, au. of 'De Oraculis,' 1638-1708.

VANDAMME, DOMINIQUE JOSEPH, count of Unebourg, one of Napoleon's generals who was attached to the division of Marshal Grouchy at the battle of Waterloo, and subsequently offered to defend Paris with the 80,000 troops he had kept together, 1771-1830.

VANDELLI, DOMENICO, an Italian physician and naturalist time of Linnæus.

VANDERGOES. See GOES.

VANDERHELST. See HELST.

VANDERHEYDEN. See HEYDEN.

VANDERMONDE, one of the most famous of modern mathematicians, 1735-1796.

VANDERSKÆTEN, FERDINAND, a Flemish economist and publicist, 1771-1823.

VANDERVELDE, CHARLES FRANCIS, the most cel. modern novelist of Germany, 1772-1824.

VANDERVELDE, VANDENVELDE, or VAN VELDE, WILLIAM, called '*the Old*,' a Dutch painter, skilled in the delineation of marine subjects, 1610-1693. His son, of the same name, called '*the Young*,' regarded as the most eminent of all the marine painters, 1633-1707. There were three others of the name:—ISAIAH, born at Leyden about 1591; JOHN, his brother, a painter and engraver, born about 1598; and ADRIAN, who was a celebrated landscape painter, 1639-1672.

VANDERVENNE, a Dutch painter, 1586-1650.

VANDERWERFF, ADRIAN, a Dutch portrait and historical painter, 1659-1722.

VANDI, A. J. D., a Germ. chemist, died 1763.

VAN DIEMEN. See DIEMEN.

VANDYCK, ANTONY, was born at Antwerp, March 22, 1599, and is the most distinguished of all Rubens's numerous scholars. He lived with that great painter for four years, and by his advice visited Italy, in 1621, where he remained for five years, chiefly at Genoa, Venice, and Rome, and returned to Antwerp in 1626. A picture of the Crucifixion painted for the church of St. Michael, at Ghent, raised his reputation at once to the highest rank, and he attained equal distinction as a portrait painter. Vandyck visited this country a second time, 1630-31, but without attaining that notice which he had expected: he accordingly returned to Antwerp; but Charles I. having seen, by him, a portrait of Nicolas Lanière, his chapel-master, sent him an invitation to return to this country, and he was courteously received by the king, who lodged him at Blackfriars' and conferred the honour of knighthood upon him the following year, 1633, with the title of painter to his majesty, and a fixed salary of £200 per annum for life. These advantages fixed Vandyck in this country, and he justified the king's choice by a long succession of the most magnificent portraits that had yet been produced out of Italy; indeed, the portraits of Vandyck are by some preferred to those of Titian; they have not the pictorial force of those of the great Venetian, but they are more refined generally, and are distinguished for more careful drawing and a more elaborate finish; the men of Titian, and the women of Vandyck, are superior. Vandyck died in London, December 9, 1641, at the early age of forty-one. Yet, notwithstanding his comparatively short life, such was his extraordinary success that he accumulated a large fortune for that time, about £20,000 sterling, though he lived in great style, keeping besides his town establishment, a country house at Eltham; and he 'kept so good a table,' says Graham, 'that few princes were more visited or better served.' He was buried in the old church of St. Paul, near the tomb of John of Gaunt: his fortune was inherited by a daughter, his only child.—(Graham, *Essay towards an English School*; Walpole, *Anecdotes of Painting*, &c.; Carpenter, *Memoir of Sir Antony Vandyck*, &c., London, 1844.) [R.N.W.]

VAN-DYK, H. S., a miscellaneous writer and poet, born in London 1798, died 1828.

VANE, SIR HENRY, a republican and religious zealot of the period of the commonwealth, was the eldest son of the baronet of that name, and was born at Hadlow in Kent in 1612. He was among the earliest of those whose religious opinions induced them to seek a home in America, and having gone to New England, in 1635, was appointed governor of Massachusets. Being far from popular among his fellow-colonists, he returned to England the year after, married here, and entered parliament: by the interest of his father also he was appointed joint treasurer of the navy with Sir William Russell. The measures in which he now took part were the condemnation of Strafford and Laud, followed, in 1643, by the 'Solemn League and Covenant' of which he was one of the chief promoters, as he also was of the 'Self-Denying Ordinance.' He stood aloof from the king's trial, but the establishment of the commonwealth, he became one of the council of state: in this position he remained till Cromwell's dissolution of parliament in 1653. Sir Henry Vane was, from the first, a steady opponent of the authority assumed by

army, his hope being that the Saviour would appear and establish a fifth universal monarchy, or reign of a thousand years; he was most obnoxious to Cromwell, therefore, the staunchest representative and upholder of whatever authority could still be exercised in the state by human agency. On several occasions these two men were brought into personal contact, and while Cromwell exhibited the greatest antipathy to the dreamy expectations, and the plausible temperament of Vane, the latter showed no deficiency of courage in braving his resentment. After the restoration he was condemned for treason, and beheaded on Tower Hill, June 14, 1662. He wrote several works, chiefly religious, at least as he understood the matter, pointing to 'The Total and Irrecoverable Ruin of the Monarchies of this World.' [E.R.]

VAN-HELMONT. See HELMONT.

VAN-HOECK, J., a Flemish painter of history, 1600-1650. ROBERT, believed to be his relation, also a painter, born 1609.

VAN-HOOREBEKE, CHARLES JOSEPH, a Flemish botanist and pharmacopolist, 1790-1821.

VAN-HUGTENBERG. See HUGTENBURGH.

VANIERE, JAMES, a celebrated French Jesuit and Latin poet, 1664-1739.

VANINI, LUCILIO, a Neapolitan philosopher, burnt alive at Toulouse, 1585-1619.

VANLOO, JAMES, a Dutch historical and portrait painter, 1614-1617. LOUIS, his son, excelled in design, died 1712. JEAN BAPTISTE, son of the latter, who became a fashionable portrait painter in England, 1684-1745. CHARLES ANDREW, called CARLO, brother of the preceding, a great historical and imaginative painter, the most popular artist of his time, 1705-1765. LOUIS MICHAEL, son and scholar of Jean Baptiste, first painter to the king of Spain, 1707-1771. His brother, CHARLES AMADEUS, famed at Berlin as a history and portrait painter, born 1718.

VAN-LOON, G., a Dutch numismatist, b. 1683.

VAN MANDER, CHARLES, a Flemish painter and writer on antiquities, 1548-1605.

VAN-MILDERT, WILLIAM, bishop of Durham, grandson of a Dutch merchant settled in London, and a distinguished theologian, 1765-1836.

VAN-NEVE, F., a Flemish painter, last cent.

VAN NOORT, OLIVER, was a native of Utrecht. He is noted as the first Dutchman who circumnavigated the globe, 1598-1601. He went out by the Strait of Magellan and returned by the Cape. But the voyage was not made memorable by any important discovery or other remarkable result. [J.B.]

VANNI, CARLOS, a Neapolitan apostate, who betrayed the liberal cause in 1775, and put an end to his existence at Sorrento, 1799.

VANNI, several Italian painters:—FORNIO, a native of Pisa, 14th century. FRANCESCO, skilled both as a painter and architect, 1565-1610. His son, RAFFAELLE, taught by Antonio Caracci, 1596-1655. GIOVANNI BATTISTA, best known as an engraver, 1599-1660.

VANNUCHI, ANDREA DEL SARTO, a very celebrated painter of Florence, 1488-1530.

VAN-OS, P. G., a Dutch painter, 1776-1839.

VAN SCHOUTEN, or SCHOUTEN, WILLIAM CORNELISAN, an able Dutch navigator, was a native of Hoorn in North Holland. He was sent out in command of an expedition fitted up by some merchants of Amsterdam, who were suffering under the oppressive monopoly which the Dutch East India Company had obtained, in virtue of their exclusive right to trade to India by the Cape and the Strait of Magellan. The object was to find another passage; this Schouten successfully accomplished (February, 1616) by sailing to the south of Terra del Fuego. He named the extreme point of land after his native town; and a strait passed through, Le Maire, after the largest contributor to the expense of the undertaking. [J.B.]

VANSOMER, PAUL, a Flemish portrait painter, who acquired the highest distinction in England before the time of Vandyck, 1576-1621.

VAN-SWIETEN, GERARD, a Dutch physician and commentator on Boerhaave, 1700-1772.

VANUDEN, L., a Flemish painter, 17th cent.

VAN-UTRECHT, ADRIAN, a Flemish painter, famous for flowers, fruit, shell-fish, &c., 1599-1651.

VAN-VEEN, or VENIUS, OTHO, a Dutch painter, distinguished for his graceful compositions and fine heads, 1556-1634.

VAN-VITELLI, GASPARD, a Dutch painter, 1647-1736. His son, LUIGI, an architect, 1700-73.

VARANDA, J., a French physician, 1620-58.

VARATANES, the Greek form of the name of Barham, king of Persia.

VARCHI, B., an Italian historian, 1502-1565.

VARENIUS, A., a Ger. theologian, 1620-1684.

VARENIUS, B., a Dutch geographer, 1610-80.

VARGAS, A. DE, a Span. painter, 1613-1674.

VARGAS, F., a Spanish jurisconsult, 16th cent.

VARGAS, L. DE, a Span. painter, 1502-1568.

VARGAS Y PONCE, DON JOSE, a Spanish navigator and geographer, 1755-1821.

VARIGNON, P., a Fr. mathemat., 1654-1722.

VARILLAS, A., a French historian, 1624-96.

VARIN, J., a French botanist, 1740-1808.

VARIN, JAMES, a celebrated medal engraver, 1604-72. JOSEPH, of the same family, 1740-1808.

VARIN, T., a French historian, 1610-1668.

VARIUS, LUCIUS, a Roman dramatic writer and epic poet, who is highly spoken of by his friends, Virgil and Horace. Hardly a fragment of his writings is now extant.

VARLEY, J., an English artist, 1777-1842.

VAROLI, C., an Italian anatomist, 1543-1575.

VARON, C., a French writer, 1761-1796.

VARRO, M. T., consul of Rome, B.C. 216.

VARRO, MARCUS TERENTIUS, a Roman statesman, and one of the most learned men of his age, was born at Rome B.C. 116, and died about 27. His learning and his actual writings were encyclopædic in extent, but of all his labours there now only remains extant a portion of his De Linguâ Latinâ, and his De Re Rusticâ, with some fragments of his Satires.

VARRO, PUBLIUS TERENTIUS ATACINUS, a Roman poet, and contemporary of the preceding.

VARTAN, an Armenian prince, killed in action against the Persians 451.

VARTAN, called *Vertabied*, the *learned*, an Armenian poet and historian of his country, 13th century. His 'Fables' were published by Saint Martin; his history remains in MS.

VARUS, consul of Rome, B.C. 12.

VASARI, GIORGIO, the celebrated author of the 'Lives of the Most Excellent Painters, Sculp-

tors, and Architects,' of Italy, from the earliest time down to the year 1568, the date of the second edition of his work, was born at Arezzo in 1512; he visited Florence in 1524, and there made the acquaintance of Michelangelo, Andrea del Sarto, and other great artists of the time. Vasari distinguished himself both as a painter and an architect, but his great and immortal service in the cause of art is his most elegant and comprehensive series of biographies above alluded to. This unparalleled biographical series, which Haydon ranked as the *third* book in the world, the Bible and Shakspeare holding the two higher places, can perhaps only be justly appreciated by the genuine lovers of their subject, and then only with diligent labour and study and considerable familiarity with the progress of modern art. It has gone through many editions in Italy; the first, or editio princeps, was published in Florence in 1550, in 2 vols. 8vo; the second, also by Vasari, in 1568, in 3 vols. 4to, with woodcut portraits, coarse but full of character, and doubtless of much individual truth. The following editions, and some other reprints, have appeared since Vasari's time:—one at Bologna, from 1647 to 1663, one at Rome in 1759, with notes by Bottari; another at Leghorn and Florence by Bottari, in 1767-72; another at Siena in 1791-94, by Della Valle, reprinted afterwards in the Milan edition of the Italian Classics; another at Florence, in 6 vols. 8vo, in 1822-23, a reprint of the second edition of Vasari, without any notes of the commentators, and even without an index. In 1832, the admirable German translation by Schorn and Förster was commenced, in 8 vols. 8vo, the last in 1849; and three good Italian editions have appeared within the last ten years or so; the last commenced in 1846, in 12mo, by a society of young enthusiasts in the cause, is beyond all praise, the researches of Rumohr, Schorn, Gaye, and other foreign critics have been taken the utmost advantage of, many documents have been consulted, and this great work is perhaps now as well illustrated as it is ever likely to be, except some very unexpected treasures among the old records of Italy should be discovered to throw new light upon this interesting subject. The editors are Carlo and Gaetano Milanesi, and Carlo Pini, of Siena. The best of Vasari's Lives are naturally the Florentines, and those who lived nearer to his own time. The notices of the earlier artists and those remote from Florence, have not escaped errors and misrepresentations, which are, however, now remedied in the various notes and comments with which the work is now enriched. But under any view the collection constitutes a remarkable series, not only for its prodigious store of facts, but also for its extreme beauty, grandeur, and fascination of style. An English translation has been lately added to Bohn's Standard Library. The following is the full title of the Italian edition recommended:—*Le Vite de' pin eccellenti Pittori, Scultori, e Architetti.* Di Giorgio Vasari: publicate per cura di una societa di amatori delle arti belle. Flor., Felice Le Monnier, 1846-54, seqq. Vasari died at Florence in 1574, and was buried in Arezzo, his native place, and of which one of the greatest of its glories, of past or of future time, will ever remain the circumstance of its having given birth to Giorgio Vasari. [R.N.W.]

VASCO DE GAMA. See GAMA.

VASI, J., an Italian designer, 1710-1782.

VASQUES, ALPHONSO, an Italian painter, born of Spanish parentage, about 1575-1645.

VASQUEZ, G., a Spanish casuist, 1551-1604.

VASQUEZ DE CORONADO, FRANCISCO, a Spanish navigator, time of Mendoza, 1540.

VASSELIN, G. V., a Fr. historian, 1767-1801.

VATABLUS, J., a French Hebraist, died 1547.

VATACES. See JOHN.

VATER, C., a German physician, 1651-1732. ABRAHAM, his son, a great promoter of inoculation, author of several works, 1684-1751.

VATER, JOHN SEVERINUS, a distinguished German Orientalist and theologian, 1771-1826.

VATTEL, EMMERICH, a jurist and man of letters, was born near Neufchâtel, in 1714. He was originally educated for the church, but his studies turned to the direction of philosophy and literature, while he found employment in the petty diplomacy of the smaller central states. Thus he was appointed, in 1746, minister from Poland to the Republic of Berne. The occasional petty dabbling in diplomatic duties, accompanied by abundant leisure, which this office conferred, probably had considerable influence in the direction of his labours and the formation of his fame. Like all inhabitants of middle Europe, ambitious of literary fame in his age, he sought it in a study of French literature, and an imitation of French models. He wrote many works;—some on light literature, such as 'Sur la Natur d' Amour'—others on metaphysics; but all alike forgotten. It was his fortune, however, to fill up a vacant space in the literature of jurisprudence, by systematizing and placing in lucid order the writings on international law, from Grotius downwards. His 'Droit de Gens'—'The Law of Nations, or Principles of the Law of Nature Applied to the Affairs of Nations and Sovereigns,' first published in 1758, has gone through many editions, been translated into several languages, and become a universal text-book. Vattel died on 28th December, 1767. [J.H.B.]

VATTIER, P., an Arabian scholar, 1623-1667.

VAUBAN, SEBASTIAN LEPRESTRE DE, the greatest military engineer and tactician of France, was born in Burgundy in 1633; and commenced his public career in the time of Mazarin. He took part in all the campaigns of Holland and Flanders, and was created marshal in 1703. He constructed or improved an immense number of fortresses, directed as many as fifty-three sieges, and was present at one hundred and forty battles. He wrote twelve folio volumes on Strategy. Died 1707.

VAUCEL, P. L. DU, a Jansenist, 1640-1715.

VAUGELAS, CLAUDE FAVRE DE, a member of the French Academy, and chief employé of that body on the famous Dictionary, 1585-1650.

VAUGHAN, HENRY, author of poems, chiefly devotional, born at Newton, in Brecknockshire, 1621, died 1695. THOMAS, his brother, author of some Rosicrucian works, written under the title of Eugenius Philalethes, died 1666.

VAUGHAN, SIR J., a learned judge, 16[illegible]-71.

VAUGHAN, SIR J., a judge and privy councillor, contemporary with Lord Lyndhurst, Tindal, and Denman, 1772-1839.

VAUGHAN, W., a poet and transl., 1577-16[illegible]

UQUELIN, Nicholas Louis, a French
ist, instructed by Fourcroy, 1763-1830.
UVENARGUES, Luc De Clapiers, Mar-
De, a moralist and elegant writer, author of
oduction to the Knowledge of the Human
,' and 'Maxims,' 1715-1747.

VENTIMIGLIA, Giuseppe, a Sicilian prince and supporter of the constitution, 1761-1814.
VENTURE DE PARADIS, Jean Michel, a French Orientalist and diplomatic agent, 1742-99.
VENTURI, Giambatista, an Italian physician, statesman, and literary *savant*, 1746-1822.
VENTURI, P., an Italian Jesuit, 1693-1752.
VENTURINI, J. G. Julius, a German officer and writer on tactics, 1772-1802.

VENUSTI, M., an Italian painter, 1515-1576.
VENUTI, R., an Ital. antiquarian, 1705-1763.
VERBIEST, Ferdinand, a Flemish Jesuit, astronomer, and Chinese missionary, 1630-1688.
VERCI, J. B. M., an Italian historian, 1739-95.
VERE, Edward, earl of Oxford, a poet and statesman of the age of Elizabeth, born about 1540, died 1604. He sat on the trial of Mary Queen of Scots, in virtue of his office of lord high chamberlain, and many traits of character, little to his honour, are recorded of him.
VERE, Sir Francis, one of the most gallant of the commanders who distinguished themselves in the reign of Elizabeth, was born in 1554. He was the companion-in-arms of Prince Maurice in the Dutch war of independence, and defended Ostend with only 1,700 men against a Spanish army of 12,000. Died 1608.
VERE, Sir Horace, baron of Tilbury, younger brother and companion-in-arms of the preceding, shared in the glory of his principal actions in the Dutch war. His great achievement was an able retreat with 4,000 men before the great general, Spinola, who commanded 12,000. Died 1635.
VERELIUS, Olaf, one of the most distinguished antiquaries of Sweden, 1618-1682.
VERELST, S., a Flemish painter, died 1710.
VERGARA, Cæsar Antonio, a Neapolitan ecclesiastic and numismatist, born 1680.
VERGARA, J. De, a Spanish painter, 1726-99.
VERGARA, N. De, called '*the Old*,' a Spanish painter of history, painter on glass, and sculptor, 1510-1574. His son, Nicholas, called '*the Young*,' a sculptor and architect, 1540-1606.
VERGENNES, Charles Gravier, Count De, a French diplomatist and statesman, 1717-87.
VERGERIO, Piero Paolo, professor of dialectic at Padua, and one of the restorers of literature, 1349-1419. Another member of the family, bearing the same names, was at first a vigorous opponent of the reformation, but became a convert to protestantism, and died in Wirtemberg 1565.
VERGIER, J., a French poet, 1657-1720.
VERGNIAUD, P. V., one of the most eloquent leaders of the Girondin party in the French revolution, was born at Limoges in 1759, and was practising as an advocate at Bourdeaux, when elected to the Legislative Assembly, 1791. He was one of the twenty-two Girondists condemned by the Jacobins of the revolutionary tribunal, and executed October 31, 1793.
VERHEYDEN, F. P., a Dutch painter and sculptor, born at the Hague 1657, died 1711.
VERHEYEN, P., a Dut. anatomist, 1648-1710.
VERHOEK, P., a painter and poet, 1633-1702.
VERMEIREN, Augustin, a Flemish Carmelite, author of Fables in verse, 1656-1703.
VERMEULEN, Cornelius, a famous designer and engraver of portraits, 1644-1702.
VERMEYN, J. C., a Dutch painter, died 1559.
VERNES, Jacob, a pastor of Geneva, known as an adversary of Rousseau, 1728-1790.
VERNET, Claude Joseph, a French painter, in great esteem for his landscapes and marine subjects, more particularly the latter, in which he excelled, 1714-1789. A. C. Horace, called *Carle*, his son and pupil, famous for his battle-pieces, 1758-1836. Horace Vernet, the celebrated painter, is son of the latter, and was born 1789.

VERNET, J., a Genevese theologian, 1698-1789.
VERNEUIL, Catherine Henriette Da Balzac D'Entraigues, Marquise De, a mistress of Henry IV., who acquired so much influence over him as to obtain a written promise of marriage, which it required all the firmness of Richelieu to annul; she conspired against the king after his marriage with Mary de Medici, 1583-1633.
VERNIER, P., a Span. mathemat., 1580-1637.
VERNIER, Theodore, a politician of the revolutionary period, afterwards a peer of France, 1731-1818.
VERNIQUET, E., a Fr. architect, 1727-1804.
VERNON, Edward, an English admiral, born in Westminster 1684. His father was secretary of state to William and Mary, and having given him a classical education, was disappointed by the adoption of a seaman's career. He first saw service under Admiral Hopson, and was in the action off Vigo, in October, 1702. His name became celebrated, however, in 1739, by the expedition to Porto Bello, the command of which was given him, with the rank of vice-admiral of the blue. In 1741 he made an unsuccessful attempt upon Carthagena, in conjunction with General Wentworth, the graphic details of which may be read in Smollett's Roderick Random. Died 1757.
VERNON, Robert, the munificent founder of the Gallery of British Art, named after him, now in the national collection, was a wine merchant, and acquired his vast fortune by trade. He was a liberal patron of the fine arts during his time, and his bequest to the nation is said to have cost him £150,000. Died 1849.
VERNON, T., a learned lawyer, died 1720.
VERNY, C. F., a French poet, 1700-1754.
VERON, F., a French Jesuit, 1575-1649.

VICO, Æneas, an Italian antiquarian, engraver, and numismatist; died about 1560.

VICO, F., a Spanish historian, 17th century.

VICO, Giovanni Battista, the first to propose a philosophical method of considering human history, was born at Naples in 1668, and became professor of rhetoric in the university of that city. His life was passed in comparative obscurity in studying the works of the ancients, and in bringing his vast acquirements in jurisprudence and criticism to bear on the problem of human destiny. The principal labour of his life is his work entitled 'Principi di una Scienza Nuova,' first published in 1725, and which is, in fact, a philosophy of history, recognizing the action of Providence, and the divine intention continually working out in social events; in this view he has been followed by Schlegel, but with much less spirituality. What Vico would demonstrate is the analogy of one age and nation with another, as regards the succession of events, and these proceeding in a certain historic cycle, which he divides into three ages—the divine, the heroic, and the human: he becomes, therefore, the interpreter of the mythical remains of antiquity, such as the Homeric poems, and displays, in his way, the reason of national manners and forms of government. The 'Universal His-

tory' of Bossuet, and the 'City of God' by Saint Augustin, were the 'only previous works that could be named in series with this of Vico; since his time—besides Schlegel—Kant, Herder, Lessing, and Condorcet, have each developed their own particular systems; to Vico, however, belongs the honour of opening out this new path through the fields of philosophy. The highest recognition he received was his appointment as historiographer to the king of Naples in 1735. In 1743 he fell into a state of insensibility which lasted fourteen months, in all which time he knew neither his friends nor children: he died thus in January, 1744. [E.R.]

VICQ D'AZYR, Felix, a French physician, famous as a naturalist and physiologist, author of valuable works, 1748-1794.

VICTOR, several popes of Rome:—Victor I., bishop and saint, succeeded 185, and was martyred, according to some accounts, 197; he was succeeded by Zephyrinus. Victor II., the friend and relation of the emperor, Henry III., reigned 1055-1057. Victor III., succeeded Gregory VII., and died after a few months' pontificate, 1086-1087. Victor IV., an antipope, elected after Adrian IV. 1159, and supported by the emperor in opposition to Alexander III.; died 1164.

VICTOR AMADEUS I., duke of Savoy, was born 1587, son of Charles Emanuel I., and crowned 1630. He married the sister of Louis XIII., and in his latter years commanded the forces of that sovereign in his Italian wars, d. 1637.

VICTOR AMADEUS II., duke of Savoy, and first king of Sardinia, was born in 1665, and succeeded his father in the duchy 1675. He married Maria of Orleans, niece of Louis XIV., but entered, nevertheless, on a tortuous policy, which involved him in a war with that monarch. Having acquired Sicily, he exchanged that kingdom in 1717 for Sardinia, by treaty with the emperor. He died two years after his abdicating in favour of his son, 1732.

VICTOR AMADEUS III., son and successor of Charles Emanuel III., was born in 1726, and ascended the throne in 1773. He founded the Academy of Sciences at Turin, and exhibited the utmost anxiety for the welfare of his subjects. His hostility to the revolution in France, provoked a contest with that country in which his throne fell by the arms of Buonaparte, 1796.

VICTOR EMMANUEL, king of Sardinia, son of the preceding, Victor Amadeus III., born 1759, succeeded his brother, Charles Emmanuel IV., 1802, abdicated during a revolt 1821, died 1824.

VICTORINUS, Marcus Aurelius, one of the thirty tyrants who assumed the Roman purple in the time of Gallienus, killed by his troops 268.

VICTORINUS of Feltre, a celebrated Italian philanthropist and charitable founder, 1379-1447.

VICTORIUS. See Vettori.

VIDA, Marco Girolamo, an Italian prelate and distinguished Latin poet, about 1490-1566.

VIDAL, B., a Provençal physician, 1741-1805.

VIDAL, D., a Spanish painter, born 1670.

VIDAL, James, called *the Old*, a Spanish historical painter, 1583-1615. His nephew, J. Vidal De Liendo, called *the Young*, 1602-1648.

VIDAL, P., a Provençal troubadour, died 1200.

VIEIL, Pierre Le, a French painter on glass and writer on the art, 1708-1772. Willia
the same family and profession, 1675-1731.

VIEILH DE BOISJOLIN, Claude Au
tin, a French biographical writer, 1788-1832.

VIEIRA, Sebastian, a Portuguese Jesuit
missionary to Japan, 1570-1634.

VIEIRA, or VIEYRA, A., a Portuguese J
and missionary to Brazil, 1608-1697.

VIEL, C. F., a French architect, 1745-181

VIEL, Charles Maria De, a converted
of Lorraine, and commentator on the Gospels,
a baptist about 1700. His brother, Lewis, en
the communion of the Church of England,
wrote on subjects of Jewish learning.

VIEL, Stephen Bernard, a French p
transl. of Telemachus into Latin verse, 1756-1

VIETA, Francis, in Latin *Vieteus*, a Fr
mathematician and algebraist, 1540-1603.

VIEUSSENS, Raymond, an eminent Fr
physician and anatomist, born in 1641, and di
an advanced age, between the years 1715 and 1
though in what precise year is not known.
life was spent chiefly at Montpellier, and h
known in medical history principally by a wor
the nervous system, entitled, *Neurographia
versalis*,' published in 1685. [J.M'

VIGAND, or WIGAND, John, a German t
logian and botanist, 1523-1587.

VIGANO, S., an Italian dancer, 1769-1821.

VIGEE, Louis Giles Bernard, a Fr
poet who bears the reputation of having b
sung the praises of every successive governm
from the time of the republic, 1755-1820.

VIGENERE, Blaise De, a French alchy
and secretary of embassy to Rome, 1523-1592.

VIGER, F., a French Hellenist, died 1647.

VIGILIUS, an African bishop, 5th century.

VIGILIUS, a pope of Rome, elected by
intrigues of Theodora, wife of Justinian, 537; d
after many reverses, arising out of his oppos
to Justinian and the empress, 555.

VIGILIUS, a Dutch jurisconsult and gover
of Holland and Gueldres, died 1577.

VIGNE, Andre De La, a French poet
historian, secretary to Anne of Brittany, 15th c

VIGNIER, Nicholas, a distinguished histo
cal writer, physician, and historiographer to Hen
III., king of France, 1530-1596. His son, of
same name, an ascetic and controversial writer, c
verted from protestantism to the Catholic Chur
dates unknown. Jerome, a son of the latte
priest of the oratory, known as a poet and his
rian, 1606-1661.

VIGNOLA, the common appellation of Giacc
Barozzio, a celebrated architect of Vignola, n
cessor of Michelangelo in the works of St. Pet
and au. of a Treatise on the 'Five Orders,' 1507

VIGNOLES, Stephen, better known under
name of Lahire, one of the most celebrated Fren
commanders of the reign of Charles VII., d
guished in all the wars of his time with the E
lish, and above all at Jargeau and the batt
Patay in 1418, died 1442.

NDE, FRANCESCO TORREBIANCA riter on demonology, 16th century.
NDE, GASPARD CARDILLOS DE, ar and controversialist, died 1570.
NDE, J. DE, chief of a Spanish o the quietists, 16th century.
IOVANNI, an Italian historian, died), his brother, author of a continua- ory, died 1363. FILIPPO, son of or of a further continuation, and of work on literary history; known Dante in 1404.
., a Latin poet, died 1640.
C., a French historian, 1717-1766.
DE JOYEUSE, L. T., a French nished in the last war, 1750-1812.
DOMINIQUE, a French physician, History of Dauphiny, 1745-1814.
IONTFAUCON DE, a French abbé, elebrated father Montfaucon, and hibited book entitled 'Comte de hich Pope derived the machinery the Lock; born about 1640, mur- hway 1675.
IERRE DE, a French prelate, nego- ic writer, 1517-1592. His nephew, mes and dignity, an ecclesiastical 13.
PIERRE, Marquis De, a French plomatist, died 1678. His wife, LT DE BELLEFONDS, friend of ife of Charles II. of Spain, author ntaining curious details of the 772. LOUIS HECTOR, son of the of Villars, and a famous marshal sed in arms to the duke of Marl- ally at the battle of Malplaquet, s son, HONORE ARMAND, duke of nce De Martiniques, was remark- but his famous parentage and the fered to Voltaire, 1702-1770.
DE BELLEFOND, a French tra- st of Guinea, 1666.
OSA, JOSE DE, a Spanish inquisi- ic poet, 1589-1658.
IE, J. B. LEFEBVRE DE, a French ologist, and Hellenist, 1732-1809.
, MARIE HORTENSE DESJARDINS, elist and poetess, 1632-1683.
, J. F. BOURGOIN DE, an eccle- graphical writer, 1652-1737.
, WM. DE, a learned Orientalist, apuchin Hebraists, 1690-1777.
E. M. DE, a Sp. poet, 1595-1669.
MARMOLEJO, P. DE, a Spanish subjects, 1520-1577.
BLAIN, F. RACINE, Seigneur De, and historian of events during the s IX., Henry III., and Henry IV.
OUIN, GEOFFRAI DE, an ancient , and commander in the fourth esulted in the capture of Constan-
P., a Fr. astronomer, 1651-1713.
E, HURON DE, a French poet, ith Philip Augustus.
E, PIERRE CH. JEAN BAPTIST SILVESTRE, a French admiral who commanded at the battle of Aboukir in 1799, and at the battle of Trafalgar in 1805. On the latter occasion he was taken prisoner, but being soon after restored to liberty he returned to France, and was ordered by Napoleon to remain at Rennes. In the despondency created by this circumstance, he committed suicide by piercing himself through the heart.

VILLENEUVE, WILLIAM DE, a chevalier of Provençe, historian of the conquest of Naples, whither he accompanied Charles VIII.

VILLENEUVE BARGEMONT, CHRISTOPHER, Count De, a Provençal statistician and man of letters, 1771-1829.

VILLENFAGNE D'INGIHOUL, HILARION NOEL, historian of Spa and Liége, 1753-1826.

VILLERMAULES, M., a Swiss missionary and writer on the state of China, 1667-1757.

VILLEROI, NICHOLAS DE NEUFVILLE, Seigneur De, a French statesman and diplomatist from the time of Charles IX. to Louis XIII., a partizan of Guise and the Spanish alliance, author of *Memoirs*, 1542-1617. His son, CHARLES, marquis of Villeroi, negotiated the marriage of Henry IV. and Mary de Medicis, died 1642. NICHOLAS, son of Charles, governor of Louis XIV. and marshal of France, 1597-1685. The most conspicuous of the family was F. DE NEUFVILLE, Duc De Villeroi, son of the latter, who was educated with Louis XIV., and took a leading part in his wars from 1693 to 1706. In 1715 he was appointed governor of Louis XV.; died 1730.

VILLERS, C. F. DOMINIQUE DE, a French writer and philosopher, who became professor at Gottingen after the emigration of 1792, and wrote an 'Essay upon the Reformation,' composed under the influence of Madame de Stael and Benjamin Constant, 1767-1815.

VILLETTE, F., a French optician, 1621-1698.

VILLIERS, GEORGE. See BUCKINGHAM.

VILLIERS, J. F. DE, a Fr. physician, 1727-94.

VILLOISON, J. B. D'ANSSE DE, an eminent Greek scholar and critic, author of several works and of manuscripts relating to Greek history, now in the Bibliothèque du Roi at Paris, 1750-1805.

VILLON, F., a French poet, 1431-1490.

VILLOTTE, JAMES, a French Jesuit and missionary to Persia and Turkey, 1656-1743.

VINCE, SAMUEL, a native of Suffolk, author of several valuable works in mathematics and astronomy. He was born of poor parents, but being sent to college by the munificence of Mr. Tilney, became professor of astronomy and experimental philosophy at Cambridge, and held several livings in the Church of England. In 1786 he was elected a fellow of the Royal Society, and his principal works appeared between that period and 1809. Died 1821.

VINCENT, a Bohemian chronicler, who was a canon and archivist at Prague, 12th century.

VINCENT OF BEAUVAIS, a learned Dominican, who composed an immense Résume, or Encyclopædia, of the learning of the 13th century, by order of Louis IX.; died about 1264.

VINCENT, F. A., a French painter, 1746-1816.

VINCENT, F. N., a French republican, born at Paris 1767, executed with Hebert 1794.

VINCENT, ISABEAU, an enthusiast of the reformed religion, born in Dauphiny 1670.

VINCENT OF LERINS, an ascetic writer and monk of that place, died about 450.

VINCENT OF PAUL. See PAUL.

VINCENT, SAINT. See FERRIER.

VINCENT, THOMAS, a nonconformist minister, remarkable for his courageous devotion to the afflicted during the great plague of London, author of 'God's Terrible Voice in the City by Plague and Fire,' an 'Explanation of the Assembly's Catechism,' and 'Fire and Brimstone,' born at Hertford 1634, died 1671. NATHANIEL, his brother, a religious writer and preacher, died 1697.

VINCENT, WILLIAM, rector of Allhallows, in London, author of several works interesting to classical scholars, 1739-1815.

VINCI, LEONARDO DA, was born at Vinci in the valley of the Arno below Florence, in 1452; he became the pupil of Andrea Verocchio. In 1483 he entered the service of Lodovico il Moro, duke of Milan, with a salary of 500 scudi per annum, equal to about a thousand pounds sterling at the present time. In 1485 he established an academy of the arts at Milan, and about ten years later, executed his celebrated picture of the 'Last Supper,' in oil colours, on the wall of the Refectory, in the convent of the *Madonna delle Grazie* in that city; there is a copy of this remarkable work, by Marco D'Oggione, now in the Royal Academy, London. Leonardo left Milan in 1499 and returned to Florence, and there commenced his great composition of the 'Battle of the Standard' for the Council Hall, in the Palazzo Vecchio. Michelangelo being commissioned by the Gonfaloniere Soderini to execute a second design for the opposite end, this was the celebrated 'Cartoon of Pisa,' exhibited in 1506, but neither work was ever executed in the hall, owing to political disturbances. In 1514 Leonardo visited Rome, but left again shortly afterwards without executing any works there, owing partly to a misunderstanding with Michelangelo, and to the pope's want of proper appreciation of his capabilities; he entered the service of Francis I., with a salary of 700 crowns per annum, and accompanied that king to France in 1516, but he was now old, and he died in France at Cloux, near Amboise, May 2, 1519, without executing any work for the French king. Leonardo da Vinci has the most remarkable reputation of any of the illustrious artists of Italy. He was a man of universal ability in science and art; he excelled in painting, sculpture, architecture, engineering and mechanics generally; in botany, anatomy, mathematics, and astronomy; and he was also a poet, and an admirable extempore performer on the lyre. Mr. Hallam in his *Introduction to the Literature of Europe*, has the following remarkable eulogium on him:—'If any doubt could be harboured, not only as to the right of Leonardo da Vinci to stand as the first name of the fifteenth century, which is beyond all doubt, but as to his originality in so many discoveries, which probably no one man, especially in such circumstances, has ever made, it must be on an hypothesis not very untenable, that some parts of physical science had already attained a height which mere books do not record.'—Unpublished MSS. by Leonardo contain discoveries and anticipations of discoveries, says Mr. Hallam, 'within the compass of a few pages, so as to strike us with something like the awe of preternatural knowledge.' The principal of his published treatises is the *Trattato della Pittura*, of which there are several editions in several languages.—(Lomazzo, *Trattato della Pittura, Scultura ed Architettura*, Milan, 1584. Rome, 1844. Vasari, *Vite*, &c.; Amoretti, *Memorie Storiche su la Vita, &c., Di Leonardo da Vinci*, Milan, 1804. See also the *Penny Cyclopædia*.) [R.N.W.]

VINCI, LEONARDO, a Neapolitan musical composer of the 18th century.

VINCIGUERRA, MARC ANTONIO, an Italian poet and secretary of Venice, 15th century.

VINDING, ERASMUS, a learned Danish philologist and jurisconsult, 1615-1684.

VINER, CHARLES, a writer on law, and munificent benefactor of Oxford, 1680-1756.

VINES, R., a presbyterian divine, died 1655.

VINET, ELIE, a French philologist, antiquarian, and learned editor, died 1587.

VINKEBOON, or VINCKENBOOMS, DAVID, a painter of Malines, 1578-1606.

VINNEN, ARNOLD, in Latin *Vinnius*, a Dutch jurisconsult, regarded as the best commentator on the Imperial Institutes, 1588-1657.

VIOLE, D. G., a Benedictine of St. Maur, an ecclesiastical writer and historian, 1598-1669.

VIONNET, G., a Latin poet, 1712-1754.

VIOTTI, GIOVANNI BATTISTA, an Italian violinist and musical composer, 1755-1824.

VIRET, PETER, a Swiss theologian, and one of the principal reformers, 1511-1571.

VIREY, C. E., a French poet, 1566-1636.

[Virgil—*From an Antique Gem.*]

VIRGIL (PUBLIUS VIRGILIUS MARO) was born at Andes, a small village near Mantua, on the 15th of October, B.C. 70. He was thus five years older than Horace, and seven years older than the emperor Augustus. An old tradition has identified Andes with the modern village of *Pietola*, and may perhaps be accepted as true. Virgil's father was proprietor of a small estate which he cultivated; and the future poet, after passing his boyhood there in the seclusion of his father's villa, was sent to school at Cremona, where he assumed the manly gown on his sixteenth birthday (B.C. 55). He next proceeded to Mediolanum (Milan) for education of a higher order, thence to Naples, where he studied Greek under Parthenius, a native of Bithynia, and afterwards visited Rome. In the capital he was instructed in the tenets of the Epicurean philosophy by Syroon, a philosopher of that sect, and a

have had, as his fellow-pupil, Varus, to whom he afterwards inscribed his sixth Eclogue. He devoted himself to study with intense application, and thus laid the foundation of that varied learning, for which he was scarcely less remarkable than for poetical genius. It is uncertain how long he may have been absent from home, and merely a conjecture that, after completing his studies, or prosecuting them so long as his feeble health would permit, he returned to his paternal farm, and there wrote some of the small pieces which are attributed to him. But his peaceful seclusion was disturbed by an unexpected event, which is believed to be alluded to in his first Eclogue. Octavianus, (Augustus) on his return to Italy after the battle of Philippi (B.C. 42), assigned to a portion of his veterans the lands in the neighbourhood of Mantua, thereby depriving Virgil of his patrimony, which, however, was afterwards restored to him, by the intercession of powerful friends. Soon after this occurrence Virgil again visited Rome, was introduced to Augustus, and to his minister, Mæcenas, the munificent patron of genius, and continued durthe remainder of his life to enjoy their friendship and patronage. In B.C. 19, he visited Greece, intending to make a tour of that country, and to revise and perfect his Æneid; but having met the emperor at Athens on his return from the East, and finding his feeble health fast declining, he resolved to accompany him to Italy. He succeeded in reaching the shores of his native country, and died soon after his arrival at Brundusium on the 22d of September, B.C. 19, before completing his fifty-first year. In compliance with his wish, his body was conveyed to Naples, and there buried at the distance of two miles from the city. The works of Virgil consist of, 1. *Bucolica*, or Eclogues, pastoral poems, amounting to ten; 2. *Georgica* (Georgics), an agricultural poem in four books; and 3. *Æneis* (the Æneid), a national epic poem, in twelve books, besides some minor poems which are ascribed to him. The Eclogues are doubtless his earliest productions, and must, therefore, be estimated chiefly as indications of the future efforts of the poet. In the Georgics the powers of the poet are more matured; freshness and vigour are given to a subject possessing but little of the poetical element; and the rude and rough hexameter Lucretius is advanced to a degree of perfection which cannot be surpassed. The object of the Æneid is to give an account of the fortunes of Æneas from the period of his leaving Troy till his settlement in Italy, as indicative of the future greatness of Rome, and, therefore, abounds in allusions to subsequent events in Roman history. In point of epic skill the Æneid is inferior to the Georgics; the defect is easily accounted for by the circumstance that the poem did not receive the finishing revisal of the poet, and was therefore ordered by him, in his last illness, to be burnt. It was, however, preserved, and published by his friends Varius and Tucca. Virgil's character as an epic poet has been often assailed, and as often defended by arguments which limits prevent us from entering upon the discussion. It may be sufficient to say that, till the appearance of the Paradise Lost, he held the second place in this the highest department of poetry; and though he has since descended to the third, he is inferior still only to Homer and Milton. [G.F.]

VIRGIL POLYDORE. See POLYDORUS.

VIRGILLE-LABASTIDE, C. DE, a French economist and mechanician, 1682-1755.

VIRGINIA, a young girl of Rome, killed by her father Virginius, as the means of saving her from the dishonour threatened by the decimvir Appius Claudius, B.C. 449. The story relates that this tragedy led to the abolition of the decimvirate, equivalent to a change in the constitution of Rome: the facts are not well authenticated.

VIRGINIUS-ROMANUS, a comic poet of Rome, age of Augustus, 1st century B.C. None of his works are now in existence.

VIRGINIUS RUFUS, LUCIUS, a Roman general and governor, time of Nero.

VIRIATHUS, leader of a revolt in Lusitania, defeated by Fabius Æmilianus, after a five years' struggle, B.C. 144, assassinated B.C. 140.

VISCANIO, SEBASTIAN, a Spanish explorer of the coasts of New California, 1602.

VISCHER, CORNELIUS, a designer and engraver of Haerlem, about 1610-1660. His brother, JOHN, an engraver, born 1636.

VISCHER, PETER, a German sculptor and founder, taught in Italy, died 1530. His son, HERMANN, killed by an accident 1540.

VISCONTI, a noble Milanese family, who headed for a long time the party of Ghibellines. The principal are—OTHO, archbishop of Milan, and vanquisher of the Della Torre party, 1208-1295. His nephew, MATTEO, called 'the Great,' perpetual lord of Milan and imperial vicar in Italy, 1250-1323. GALEAZZO, his successor, who compromised himself with the Guelphs after a long struggle against them, and was thrown into prison by the emperor, Louis V., 1277-1328. AZZO, son and successor of the preceding, declared against Louis, and was named vicar of the church by the pope, John XXII. He greatly increased his territories, and died 1339. LUCHINO, son of Matteo the Great, and successor of his nephew, Azzo, poisoned by his wife 1349. GIOTTANNI, brother of the latter and archbishop of Milan, was associated in the temporal government of Luchino, and increased his own importance at the expense of the papacy, died 1354. MATTEO II., grandson of Matteo the Great, by his fifth son, Stefano, had a share in the sovereignty 1355, and was disposed of by poison. GALEAZZO II., one of the amiable brothers of the latter, died 1358. BARNABO, another of the brothers and associates, was poisoned by his nephew, Giovanni Galeazzo, in 1385. In this long interval of power he had shown himself a cruel and debauched prince, but he laid the foundation of the university of Pisa, and managed to steer his course through difficult times. GALEAZZO, the *first* of this name with the title *duke of Milan*, having treasonably acquired the state in 1385, endeavoured to make himself king of Italy: he greatly increased the territory and the number of cities under his government; died 1402. GIOVANNI MARIA, eldest son and successor of the latter, being put to some trouble by the regency of his mother, made an attempt to poison her; his subjects soon after revolted, and he was assassinated by a natural son of Barnabo 1412. PAOLO MARIA, brother of Giovanni, secured his authority by marrying the widow of the latter, and sometime after had her beheaded. He increased his

dominions by robbing the Swiss, and many valiant names in Italian history were engaged in his wars; died 1447. The natural daughter of the last named having married a Sforza, gave rise to a new dynasty in Milan.

VISCONTI, GASPARD, of the same family as the preceding, a courtier and poet, 1461-1499.

VISCONTI, GIOVANNI BATISTA, a learned antiquarian, successor of Winckelmann as commissary of antiquities at Rome, and keeper of the pontifical museum, 1722-1784. His eldest son, ENNIUS QUIRINUS, far exceeded him in ability and learning as an archæologist, and his works are regarded as high authorities. The principal of them is a 'Description of the Pio-Clementine Museum,' and Greek and Roman Iconographies, compiled by desire of Napoleon. Born at Rome 1751, died 1818.

VISCONTI, J., a liturgist, died 1633.

VISDELOW, C., a French Jesuit and Chinese missionary, au. of a 'Hist. of Tartary,' 1656-1737.

VISDOMINI, E., an Italian poet, 1550-1622.

VISE, JOSEPH DONNEAU DE, a French historiographer and dramatic writer, 1640-1710.

VISETTI, J., an Italian poet, 1736-1813.

VISSEHER, RŒMER, a Dutch poet, founder of a reunion of literary men, who contributed to restore the Dutch language, 1547-1620. ANNE, his eldest daughter, called the Dutch Sappho, skilled in poetry, music, and painting, 1584-1652. MARIE, her sister, also a dist. poetess, 1594-1649.

VITA, J. DE, an Italian archæologist, 1708-74.

VITALIANUS, a pope of Rome, 657-672.

VITALIS. See ORDERIC.

VITELLIO, or VITELLO, a Polish mathematician, the first European in modern times to write anything valuable on optics, about 1254.

VITELLIUS, AULUS, a Roman general, proclaimed emperor in Germany at the time Vespasian was engaged in war with the Jews, A.D. 69. About the time he arrived in Rome, Vespasian was proclaimed at Alexandria, and, on the latter arriving in Italy at the head of his hostile army, Vitellius was put to death.

VITELLIUS, ERASMUS, a Polish prelate and negotiator at the diet of Augsburg, 1470-1521.

VITIGES, successor of Theodatus as king of the Ostrogoths in Italy 526, taken captive by Belisarius 540, died at Constantinople 543.

VITRINGA, CAMPEGIUS, a learned protestant divine and Hebraist, professor at Franeker, 1659-1722. His son, HORACE, a Hebrew critic, died in youth, 1680-1696. CAMPEGIUS, his second son, a professor and theologian, 1693-1723.

VITRUVIUS POLLIO, MARCUS, a Roman architect, the author of a well-known treatise on architecture in ten books, *De Architecturâ*. The *editio princeps* of this work was published at Rome about 1480, without date or name of printer, by George Herolt, in folio, and under the superintendence of Sulpitius: there have been many editions since, in the original Latin and in the principal European languages; in English, by W. Newton, in 1771-91, with plates, folio, London; by W. Wilkins, R.A., in 1812; 'The Civil Architecture of Vitruvius,' in two parts, 4to, being a translation of the 3rd, 4th, 5th, and 6th books only, and those not entire; and by Joseph Gwilt, London, 1826, in royal 8vo. Neither the time nor place of Vitruvius' birth are known, but as he dedicated his book to the emperor Augustus, when he was already old, he is supposed to have been born about 80 B.C. This treatise is a very important work as explaining the knowledge of the ancients on the matters treated. Vitruvius mentions the several ancient writers to whom he was chiefly indebted, all of whose works are lost. See a summary account of this treatise in the *Penny Cyclopædia*. [R.N.W.]

VITRY, EDWARD DE, a French Jesuit, distinguished as a numismatist and philologist, 1670-1730.

VITRY, J. DE, a French historian, died 1244.

VIVARES, F., a French engraver, 1709-1780.

VIVENS, CHEVALIER FRANCIS DE, a French physician and economist, 1697-1780.

VIVES, JOHN LOUIS, in Latin *Ludovicus Vives*, a classical scholar, and one of the revivers of literature in Spain; born at Valentia 1492, died at Brussels, where he had settled as a teacher of the *Belles Lettres*, 1541. Vives was one of the teachers of the Princess Mary Tudor, and was obliged to leave England for writing against the divorce of Catharine.

VIVIAN, RICHARD HUSSEY, Lord, eldest son of John Vivian, Esq., of Cornwall, and distinguished as an officer in the late war, was born in 1775. He entered the army in 1793, and commenced active service on the coast of France under Lord Moira. His first distinctive achievement was in the desperate affair at Corunna, when he covered the retreat of Sir John Moore. At Waterloo he commanded the sixth brigade of cavalry. After the peace he took an active part in politics, was appointed master-general of the ordnance in 1835, and created a peer 1841. Died 1842.

VIVIANI, VINCENTIO, an Italian mathematician, taught by Galileo, and honoured by the grand duke of Tuscany with the office of chief engineer. We owe to him the restoration of the lost treatises of Aristæus and Apollonius of Perga, born at Florence 1622, died 1703.

VIVIEN, J., a French painter, 1647-1734.

VIZZANI, ÆNEAS, in Latin *Vigianus*, a physician of Bologna, 1543-1602. POMPEIO, an historian of that city, died 1607. CARLO EMANUEL, a philologist and classical commentator, 1617-61.

VLADIMIR, four Russian princes:—VLADIMIR, called *the Great*, became master of the dominions of his father after assassinating his brother Jaropolk, in 980, and commenced the civilisation of Russia, and the foundation of the Christian religion; died 1005. VLADIMIR (the second, then not called by that title), eldest son of Yaroslav grand duke of Kief, became duke of Novgorod, 1038, conducted an expedition against Constantinople 1041, died 1052. VLADIMIR II., his great grandson, commenced to reign 1113, and was distinguished for his humanity and wise administration; he sustained a war with the Bolgarians, the Livonians, and the emperor Alexis Comnenus, and was the first of the grand dukes who took the title of Czar, and assumed the characters of imperial dignity; died 1125. VLADIMIR ANDREWITZ, nephew of Ivan II., is remarkable for renunciation of the power offered to him, in favour of his cousin, Demetrius, with the view of preventing the establishment of a regular order in succession. This occurred in 1364, and Vla-

afterwards distinguished himself in arms against the Tartars. Died 1410.

VLADISLAS. See ULADISLAUS.

VLAMING, P., a Dutch poet, 1686-1733.

VLASTA, a Bohemian amazon, who maintained a struggle for eight years in the endeavour to establish a state ruled by women, killed 743.

VLIEGER, S., a Dutch painter, 17th century.

VLIERDEN, LAMBERT DE, a Flemish jurisconsult and Latin poet, 1564-1640.

VLIET, WILLIAM VAN, a Dutch historical and portrait painter, 1584-1642.

VLIET, or VLITIUS, J. VAN, a Dutch jurisconsult, philologist, and poet, died 1666.

VOEL, J., a French Jesuit, 1541-1610.

VOET, GISBERT, in Latin *Voetius*, professor of divinity and Oriental languages at Utrecht; born at Heusden 1593, died 1680. He wrote against the Arminians, and against the Cartesian philosophy, with much ill-feeling and personal bitterness. His son, PAUL, was professor of law at Utrecht, and wrote several periodical works, 1619-1667. DANIEL, another of his sons, was professor of philosophy, and wrote on physiological and other subjects, 1629-1660. JOHN, son of Paul, became a professor of law at Leyden, and is au. of a valuable 'Commentary on the Pandects,' 1647-1714.

VOGEL, C., a German composer, 1756-1788.

VOGEL, J. W., a Ger. mineralogist, 1657-1723.

VOGEL, RODOLPH, a German physician and chemist, compiler of a 'Medical Library,' published between 1751 and 1771.

VOGLER, J. P., a Germ. botanist, 1746-1802.

VOGLI, J. H., an Ital. biographer, 1697-1762.

VOIGT, G., a German theologian, 1644-1682.

VOIGT, J., a Germ. bibliographer, 1695-1765.

VOIGT, J. C., a German physician, 1725-1810.

VOIS, A. DE, a Dutch painter, born 1641.

VOIS, R. DE, a French ecclesiastic, 1665-1728.

VOISENON, CLAUDE HENRY FUSEE, Abbé [illegible], a dramatic writer and wit, whose life presents [illegible]gular mixture of alternate devotion and licen[illegible]ness, born at the Château de Voisenon, near [illegible], 1708, died 1775. The best of his ro[illegible]s is entitled 'L'Histoire de la Felicite;' some [illegible]comedies were very successful.

[illegible]SIN, J. DE, a rabbinical writer, 1620-1685.

[illegible]SIN, or VOYSIN, D. F., chancellor of [illegible] during the Orleans regency, 1654-1717.

[illegible]TURE, VINCENT, a poet and man of letters, [illegible]d by Mazarin, 1598-1648.

[illegible]NUS, A., a Polish protestant, celebrated [illegible]ntroversy with the Jesuits, 1530-1610.

[illegible]KAMMER, J. C., a physician and botanist [illegible] berg, last century.

[illegible]KAMMER, J. G., a physician and botanist [illegible] berg, 1616-1693.

[illegible]KMANN, J. J., a native of Hamburgh, [illegible] a translator, 1732-1803.

[illegible]OV, FEDOR GRIGORIEVITCH, a great [illegible]ramatist and actor, 1729-1763.

[illegible]R, NICHOLAS, secretary to the duke of [illegible]and historian of Alsace, 16th century.

[illegible]NHOVE, J., a Dutch poet and pro[illegible]ologian, 17th century.

[illegible]Y, CONSTANTINE CHASSEBŒUF, Comte [illegible]d in the early part of this century a [illegible]putation, which, however, did not rest [illegible]asis either of deep learning or of solid thought, as to secure its permanence. His most famous work, the 'Ruines, ou Méditations sur les Révolutions des Empires' (1791), is a piece of showy and even eloquent writing; but it has no real force as an exposition of the unsound and dangerous principles which it inculcates. Soon after it there appeared 'La Loi Naturelle,' a system of ethics founded on the basis of materialism. Before the publication of these works, he had done better service by his spirited and observant 'Voyage en Syrie et en Egypte;' and afterwards he was a valuable labourer in the field of Ancient Chronology. His speculations on the Oriental Tongues led to much controversy, but seem to be now held quite destitute of worth.—Volney was born in Anjou in 1757, and inherited after a time property enough to let him indulge in travelling and miscellaneous studies. He took part in the Revolutionary struggles, attaching himself to the party of the Gironde; and after the fall of Robespierre he was for some time a professor in the Ecole Normale. At first he was a favourite of Napoleon, who proposed to make him second consul; but by and by he shared in the contempt with which the emperor treated all independent thinkers. He voted in the senate for Napoleon's deposition, and was created a peer at the Restoration. He died in 1820. [W.S.]

VOLPATO, GIOVANNI, an Italian engraver and writer on the principles of design, was born at Bassano 1733, died 1802. Volpato was instructed by Bartolozzi, and was employed to make engravings from the paintings of Raphael at the Vatican. A monument by Canova has been erected to him.

VOLPATO, J. B., an Italian painter, 1633-1706.

VOLPI, GIOVANNI ANTONIO, a famous Italian scholar and Latin poet, 1686-1766. His brother, GAETANO, an editor and bibliographer, born 1689. A third brother, GIAMBATTISTA, a distinguished anatomist, taught by Morgagni, died 1757.

VOLPINI, GIAMBATTISTA, an Italian physician and disciple of Van Helmont, died 1714.

VOLTA, ALEXANDER, born at Como, Milan, 14th February, 1745; died 5th March, 1827, at Como. Educated in the public school of his native place under the eye of his father, Volta at an early age directed his attention to the phenomena of electricity. About 1775 he published an account of his electrophorus, which in the smallest size forms a source of the electric fluid, a remarkable instrument at that period in the history of electricity. In 1776 and 1777 he noticed the production of carburetted hydrogen in stagnant pools. Although probably unknown to him, Franklin had described the same fact in 1774. He showed in 1780 that the burning of some of Pietra mala is due to this gas. In 1777 he first used eudiometers to fire gases in close vessels, and invented about the same time the electric gun and pistol, and the permanent hydrogen lamp. In 1779 he became professor of physics at Pavia. In the beginning of the year 1800, Volta constructed the Voltaic pile, the most wonderful apparatus perhaps ever invented by man, since of the unparalleled truths developed by the agency of this simple invention, we have only yet seen the dawn. After this period he was made a senator of Lombardy by Napoleon, who likewise bestowed other favours upon him. But he made no figure

as a political orator, falling short in this respect even of Newton, who, during his parliamentary career, is said to have spoken only once in the House of Commons, and the solitary oration was to direct the door-keeper to shut one of the windows, through which a draught of air was projected upon the member addressing the House. Volta, however, never uttered a word. In 1819, he retired from his professorship to his native town, and spent the evening of his days, beloved and honoured by his fellow-citizens. [R.D.T.]

VOLTAIRE, the name capriciously assumed by François Marie Arouet, was made by him more celebrated than any other word that we read in the literary history of the eighteenth century. There was hardly any department of literature to which Voltaire did not make contributions; and, to say nothing of many efforts trifling or unsuccessful, the variety of his genius is attested by the number and diversity of the departments in which he attained celebrity. He gave to the French language some of its finest tragedies, and its only epic that is worthy of the name; a few of its liveliest novels, and many of the wittiest and most highly finished of its satirical and other light poems; several of its most spirited and judicious histories, and a large number of its most acute critical essays; and, above all, he poured out an enormous series of writings, which, though their claim to the title of philosophical may justly be questioned, passed in their time for the exposition of a true and great philosophy, and exercised on public opinion throughout Europe a tremendous and practical influence. He was a consummate master in the art of representation, owing his effectiveness much less to his great clearness and consecutiveness of thought, than to the remarkable skill and liveliness with which he puts his ideas into words: his poetical diction is very refined and terse; and his prose style is unsurpassed for its apt perspicuity, its easy and varied grace, and its brilliant turns and strokes of wit. Against this large sum of merit, there has to be set off a heavy account of literary faults, caused chiefly by a lamentable predominance of moral evil. Voltaire was a bad-hearted man: he neither loved nor reverenced any object except himself and his own glory; his vanity generated an irascible malignity, and a settled unbelief in all that is true and holy; and, while his serious poetry thus became cold, his other works exhibit unrestrained indulgence in a sneering irony, which, taken along with their prevalent purpose, may be held as not unjustly imaged in Goethe's Mephistophiles. The dangerous political tendency attributed to Voltaire's writings was little more than indirect: the immediate objects of his attack were much seldomer kings than priests. He was, in fact, a bigot, a bigotted and intolerant deist. The atheism professed by some of his fellow-Encyclopedists, was regarded by him with a dislike as scornful as that with which he looked on Christianity; and if the design which he avowed, of destroying the Christian religion, occupied him almost exclusively, this was only because that faith was nominally or really prevalent, and because among its ministers were many of the enemies on whom he panted to be revenged. Trained in his youth amidst the unbelief and profligacy which pervaded the aristocratic society of Paris in the era of the Regency, he taught literature to mock at truths which he saw mocked at in real life; and he thus became the direct agent in propagating, but the indirect and unwitting instrument in finally overthrowing, the system of opinions and conduct which disgraced that evil time.—Voltaire was the son of François Arouet, an officer in the finance department of the government, and was born at a village near Paris, in 1694. He distinguished himself in boyhood, at the Jesuit College of Louis-le-Grand, by his aptitude for learning, his malignant wit, and his inclination to scoff at religion. His godfather, a fashionable and literary abbé, introduced him at an early age into courtly circles, where he speedily learned the hollowness of everything around him, and acquired and exhibited his characteristic skill both in artful compliment and in biting repartee. He was next placed in the chambers of a lawyer, but speedily deserted them.—Indecent satirical verses having been circulated on the death of Louis XIV., the notoriety of the young Arouet caused him to be suspected (wrongfully for once) of being the author. He was confined for a year in the Bastile, where he finished his tragedy 'Œdipe,' and sketched his epic 'L' Henriade.' He was now allowed by his father to take his own way. His tragedy, proving successful, was followed by others which failed; the 'Henriade,' stolen in manuscript, as he alleged, was printed, with satirical verses which he said were interpolations. The publication, thus called surreptitious, made him famous; and the same farce was repeated so often in his literary career, that, in this case as in the rest, the whole was plainly a device of the author himself. He now experienced, much as Dryden did afterwards, the danger of associating with aristocratic ra[illegible]. A man of quality, affronting the young po[illegible] society, was put to silence by an apt retort [illegible] took his revenge by making his valets give [illegible] upstart a beating; Voltaire learned to fence, [illegible] lenged his insulter, and was answered by an [illegible] prisonment of six months. On his release he [illegible] banished from the kingdom.—He chose to pass [illegible] exile in England, where he lived for three [illegible] (1726-1729). His French apologists say that [illegible] was here confirmed in his infidelity by his intim[illegible] with Bolingbroke and others. No confirmation [illegible] additional instruction was needed. Hardly [illegible] reason is there for the assertion that he made [illegible] self profoundly acquainted with the English [illegible] guage and literature. He did learn very muc[illegible] both; but he never learned anything profou[illegible] He became sufficiently acquainted with Sh[illegible] speare's works to ridicule them and steal f[illegible] them; and he acquired English enough to wri[illegible] ludicrously blundering letter, which is preserv[illegible] the biographers of Pope. In England, at all eve[illegible] he learned how to publish works by subscrip[illegible] and perhaps also how to conduct comm[illegible] speculations. By the English profits of an ed[illegible] of the 'Henriade,' he laid the foundation of a [illegible] tune, which he afterwards increased enormous[illegible] lottery tickets, gambling in the corn trade, [illegible] lending money at usurious interest. Thus, [illegible] he soon affected to be above receiving any p[illegible] his literary works, he was a rich man for [illegible] years of his life, and a very rich one at its cl[illegible] For several years after he was allowed to retu[illegible] France, Voltaire shifted his residence often, [illegible] sometimes real occasion to dread the p[illegible]

nt. Now, besides the 'Lettres Philosophiques,' etched in England, and very obnoxious,) appeared 'Histoire de Charles XII.,' and several tragedies, ong which were 'Adelaide du Guesclin,' and aire' (1732), his dramatic masterpiece. In 1738 ltaire and Madam du Chastelet, a married man of a mathematical turn, agreed to live ether, and retired to the Villa of Cirey, on the lers of Champagne and Lorraine. There they d, studied, and quarrelled, till 1749, when the y, who had more lovers than one, died in child- Her example, and Voltaire's boundless pre- mption, made him mistake himself so much as publish the 'Elémens de la Philosophie de wton.' In this retreat were composed, besides er tragedies, the two fine ones 'Mahomet' and erope;' as also the 'Siècle de Louis XIV.,' and, part at least, the 'Essai sur les Mœurs et sprit des Nations.' The retirement was inter- ted by visits to Paris, by several other journeys, l by a secret mission to Frederic II. of Prussia, om Voltaire had already visited.—In 1750, on invitation of this eccentric king, Voltaire settled Berlin. He remained there for three years, ring which he enlivened the royal circle by his , corrected the bad French of the royal philo- her and poet, and learned to demonstration, not y that courts are wearisome places, but that ederic of Prussia and François Arouet were too each other to be really friends. This period was prolific in new compositions.—Nor did much was important come from his pen during the few years, which he spent at various places rance, living for a time also in Germany, to ct materials for the 'Annales de l' Empire,' h is described as being the only one of all his that wearies the reader.—In 1758, when he his sixty-fourth year, he purchased two small , lying not far from Geneva, though within nch frontier; and at his chateau of Ferney, these, he passed the last twenty-two years ife. Ferney was, during that time, what rd became, more worthily, in our own day, ter-place of all the celebrities of Europe, he master of the mansion entertained ly, while he sedulously prosecuted his own labours. To this period, of vigorous old mpeded by personal dangers, but far from ndisturbed by personal quarrels, belong ny of Voltaire's works, and some of his he last of his successful plays were elin de la Chine,' acted a little before his t, and 'Tancrède,' soon after it. A other tragedies were confessedly failures; omedies always had been so. 'La Philo- l' Histoire' (1765), was written as an ion to the 'Essay on the Manners of now completed and published; and the de Pierre le Grand' appeared in parts to 1765. Thus, as one of his French observes, 'To combat religion with- , and to make war on all who defended end his own glory against those who ; and to succour or avenge the innocent human justice: all these diversified were far from absorbing his whole re is here an allusion to a series of xertions, of which his vindication of of Calas was the first. Though he was doubtless led to defend the unfortunate Calvinist by regarding him as a victim of his own enemies the priests, his better feelings were keenly awakened as the long struggle proceeded, and this and several subsequent appeals of the same sort are among the best points in the conduct of the 'Philosopher of Ferney.' It should be noted, also, that, with all his frugality, he was a liberal and improving landlord, and a charitable neighbour. He quarrelled with his parish priest; but he built him a new church. Towards the end of his days, indeed, he showed a desire of reconciliation with the ministers of religion, his expression of which scandalized his infidel friends as a piece of cowardice, while the clergy were disposed to regard it as shameless hypocrisy. He seemed to look no farther than obtaining the sacraments by pretences and tricks; and he justified himself to his disciples by saying, that he wished his body to rest in consecrated ground. It was, after all, not without deception and intrigue, that his friends were able to procure this posthumous honour for the unrepenting apostle of unbelief. Having gone to Paris, where he had not been for twenty years, he died there in 1778, soon after having completed his eighty-fourth year. [W.S.]

VOLTERRA, Daniel Ricardi De, a celebrated Italian painter and sculptor, 1509-1566.

VONCK, F., a Belgian advocate, known as one of the popular leaders in 1789, died 1792.

VONDEL, Joost Von Der, a Dutch poet and dramatic writer, whose works have greatly aided in perfecting his native language, 1587-1679.

VOPISCUS, Flavius, a Latin historian, who lived at Rome in the time of Diocletian and Constantine Chlorus, commencement of the 4th century. He is considered one of the best writers of the Augustan histories. His work commenced with the history of Aurelian, but his remains now extant are the lives of the four tyrants, Firmus, Saturninus, Proclus, and Bonosas; and of the three emperors, Carus, Numerianus, and Carenas.

VORAGINE, J. De, an Italian Dominican, historian, and writer of sacred legends, died 1298.

VORST, Ælius Everard, a Dutch physician, director of the botanic garden at Leyden, 1565-1624. His son Adolphus, a physician and botanist, editor of an edition of Hippocrates. 1597-1663.

VORST, Conrad, in Latin *Vorstius*, a Dutch theologian, successor of Arminius at the academy of Leyden, 1569-1622. William Henry, his son, a minister and Hebrew scholar, died 1660.

VORSTIUS, J., a Lutheran controversialist, philologist, and Hebrew scholar, 1623-1676.

VORTIGERN, a British king, elected after the departure of the Romans from this island in 454, killed in battle 485.

VOS, Martin De, an eminent Flemish painter, instructed by his father and by Tintoretto. He excelled in landscapes and historical composition; died at Antwerp 1604. Simon Paul, another artist of this name, excelled most in hunting pieces, and flourished at Antwerp about the same time, but the dates are not ascertained.

VOSS, John Henry, a German poet and critic, who ranks also among the greatest of German translators and philologists, was born of humble parentage at Mecklenberg in 1751. He studied

under Heyne at Gottingen, and in 1809 was appointed professor at Heidelberg, in which office he died 1826. In his translations of Homer, and others of the chief classics, Voss is said to have preserved the metrical form of the original, the most minute details, and expressions of ideas, the epithets, and all the effective characteristics, with surprising fidelity. He has translated Shakspeare, but this endeavour is understood to be less successful. He was involved in many bitter controversies with Heyne, Stolberg, and Creurey. His own 'Idyls' have the reputation of being charming additions to the native literature of Germany.

VOSSIUS, GERARD, a Roman Catholic theologian and learned editor, died 1609.

VOSSIUS, GERARD JOHN, professor at Leyden and Amsterdam, celebrated for his extensive learning as a theologian and philologist, was the son of a protestant minister, and was born near Heidelberg 1577. Some of his works are still considered of great value. He was killed by falling from a ladder in his library 1649. His son, ISAAC, also bears a great name among the learned, but he was sceptical of revelation; he settled in England and became canon of Windsor, 1618-1688.

VOUET, SIMON, an eminent Fr. painter, employed in the Louvre and Luxembourg, 1582-1649.

VOULTE, JOHN, in Latin *Vulteus*, a Latin poet, born at Rheims about 1542.

VOYER, a family of distinguished Frenchmen: —RENE, Seigneur D'Argenson, a soldier and diplomatist, 1596-1651. His son and successor in the title, same name, a diplomatist and ambassador to Venice, 1623-1700. MARC RENE, son of the latter, chancellor of France, minister of police, and a great promoter of *Lettres de Cachet*, 1652-1721. His eldest son, RENE LOUIS, Marquis D'Argenson, minister of foreign affairs, distinguished as a scholar and partizan of the philosophic doctrines, author of 'Essays,' 1694-1757. MARC PIERRE, brother of the latter, successor of his father as lieutenant-general of police, and successor of M. de Bretuil as minister of war, was born in 1696. His name is a conspicuous one in the history of the Orleans regency; and having strennously opposed the system of William Law, he was out of favour till the great financialist had fallen into disgrace. He was a patron of learned men, and D'Alembert and Diderot dedicated the Encyclopédie to him. He was disgraced through the influence of Madame Pompadour in 1757; died 1764. His son, RENE, a distinguished commander, flourished 1722-1782.

VOYS, A. DE, a Dutch painter, born 1641.

VOYSIN. See VOISIN.

VREE, or VREDIUS, OLIVER DE, a Flemish historian of his own country, 1578-1652.

VRIES, GERARD DE, a zealous Cartesian philosopher, flourished at Utrecht 17th century.

VRIES, JOHN FREDEMAN DE, a Dutch painter of architecture and perspective, 1527-1588.

VRIES, MARTIN GERRITSON DE, a Dutch navigator, time of Van Diemen, 1642.

VRILLIERE, LOUIS PHELIPEAUX, Marquis De La, secretary of the Orleans regency, 1672-1725.

VROOM, or VROON, HENRY CORNELIUS, a Dutch marine painter, from whose designs the tapestry in the House of Lords, representing the defeat of the Spanish armada, was executed to the order of Admiral Howard, 1566-1617.

VUEZ, A. DE, a French painter 1642-1724.

VUILLEMIN, or WILLEMIN, JEAN, a French physician and Latin poet, 16th century.

VUITASSE, C., a Fr. theologian, 1660-1716.

VULCANUS, the Latinized name of Bonaventure de Smet, a learned Fleming, 1538-1614.

VULSON, or WLSON, DE LA COLOMBIERE, MARC DE, a famous heraldic writer, who resided at Grenoble, till his domestic peace was destroyed, in the first half of the 17th century, and then took up his abode at Paris. He died in office at the court 1658. Among his works, which are of great value, may be mentioned 'Le Vrai Théâtre d'Honneur et de Chevalerie,' 2 volumes in folio, 'La Science Heroique,' and 'De L'Office des Rois d'Armes, des Heraults et Poursuivants.'

VUOERDEN, M. A., Baron De, a French administrator, author of 'Historical Journals' relating to the history of Louis XIV., 1629-1699.

VZESLAS, grand duke of Russia, rival of Isaslav in their civil wars, 1068-1101.

W

WAAJEN, WAASEN, or WAEYEN, JEAN VANDER, a Dutch theologian, who has the reputation of being one of the best controversialists of that country, and was counsellor to the prince of Orange, 1639-1701. His son, of the same names, who succeeded him as preacher to the university of Franeker, died 1716.

WAAL, or WAEL, LUCAS DE, a painter of Antwerp, taught by John Breughel, 1591-1676. CORNELIUS, his younger brother, 1594-1662.

WACE, or WAICE, ROBERT, an Anglo-Norman poet and chronicler, who was canon of Bayeux, and chaplain to Henry I. of England, 12th century.

WACHTER, JOHN GEORGE, a learned German philologist and antiquarian, 1673-1757.

WACKERBARTH, A. C. COUNT VON, an Austrian field-marshal and statesman, 1662-1734.

WADING, or WADDING, LUKE, an Irish priest, who held a professorship at Salamanca, and afterwards resided at Rome, author of a 'History of the Order of St. Francis,' and editor of several learned works, including Duns Scotus and Calaisio's Concordance, 1588-1657.

WADDING, PETER, an Irish Jesuit, who became chancellor at the university of Gratz, in Styria, author of Latin works, 1580-1644.

WADHAM, NICHOLAS, founder of the college that bears his name at Oxford, 1536-1610.

WADSTROM, or WADSTRŒM, CHARLES BERNARD, a Swedish engineer, memorable as a promoter of African colonization and discovery, was born in Stockholm 1746. He visited Africa in company with the botanist, Sparrman, and the mineralogist, Arrhenius, in 1787, and on coming to London was invited to give evidence before the privy council, in an inquiry tending to the abolition of the slave trade. His pamphlet on the subject led to the establishment of the English colony at Sierra Leone; died at Paris 1799. Wadstrom

added some remarks upon the negro character to the work of Norris on Dahomey.

WÆL, Lucas De, a Flemish painter, 1591-1676. Cornelius, his brother, a painter of landscapes and battle-pieces, 1594-1662.

WAFER, Lionel, an English adventurer, who was originally a surgeon in the army, and sailed with Dampier. The latter having quarrelled with him, put him ashore on the isthmus of Darien, where he remained some time with the Indians. He published an interesting narrative on his return home in 1690.

WAFFLARD, Alexis James Maria, a French dramatic author, 1787-1824.

WAGA, Theodore, a Polish jurist and historian of his own country, 1739-1801.

WAGENAAR, John, historiographer to the city of Amsterdam, author of a 'History of Holland from the Earliest Times to 1751,' 'The Present State of the United Provinces,' 'Description of the City of Amsterdam,' and 'The Character of John de Witt placed in its True Light.' The first of these works extends to 21 vols. 8vo, and the edition of 1752-1759 is embellished with engravings, maps, and portraits, by Houbraken. Wagenaar was born in Amsterdam 1709, died 1773.

WAGENAAR, Luke Jansen, a Dutch pilot and writer on navigation, died 1596.

WAGENHARE, Peter De, a religious professor and Latin poet, born about 1599, died 1662.

WAGENSEIL, John Christopher, professor of history and jurisprudence at Altorf, author of 'Tela Ignea Satanæ,' which is a collection and refutation of all that the Jews have written against Christianity, 1633-1705.

WAGER, Sir Charles, a brave naval officer, distinguished in the reign of Anne, 1666-1743.

WAGHORN, Thomas, a lieutenant in the royal navy, whose name will long be held in remembrance for his achievement of the Overland route to India. He was born at Chatham in 1800, and having seen much service by sea and land in the employ of the East India Company, commenced the execution of his great project in 1827. His exertions were crowned with success, but his means and his health were both exhausted, and he died soon after receiving a meagre instalment of the thankful recognition to which he was entitled, in 1850.

WAGNER, B., a professor of philosophy, 16th c.

WAGNER, Charles Christian, a German physician and professional writer, 1732-1796.

WAGNER, C. L., a Ger. theologian, last cent.

WAGNER, Gabriel, a German polemic and philosophical writer, professor of literature and poetry at Hamburgh in 1696.

WAGNER, Godefroi, a German divine, and editor of several learned works, last century.

WAGNER, G. F., a German jurist, born 1631.

WAGNER, J. G., a Ger. physician, died 1759.

WAGNER, J. J., a Swiss physician, author of a Natural History of his country, 1641-1695.

WAGNER, Louis Frederic, a jurisconsult and numismatist of Tubingen, 1700-1789.

WAGNER, Paul, a magistrate and jurist of Leipzig, 1617-1697. Christian, his son, a divine and learned writer, 1663-1698. Gottfried, brother of the latter, a learned writer upon the origin of the Americans, 1652-1725.

WAGNER, Peter Christian, a learned German physician and naturalist, 1703-1764.

WAGNER, Tobias, a learned theologian and counsellor at Tubingen, 1598-1680.

WAGSTAFFE, Thomas, a learned divine of the party of nonjurors, who adopted the medical profession after the revolution, and finally became a prelate: besides his Sermons, he wrote some political tracts and a vindication of Charles I., 1645-1712.

WAGSTAFFE, William, known as a humorous writer, physician to Saint Bartholomew's Hospital, born in Buckinghamshire 1685, died 1725.

WAHLENBERG, George, an eminent Swedish botanist and geologist, 1784-1814.

WAILLY, Noel F. De, a French grammarian, 1724-1801. His son, Stephen Augustin, author of a Rhyming Dictionary, 1770-1821. Charles, of the same family, a famous architect, 1729-98.

WAILLY, P. J., a Fr. missionary, 1759-1828.

WAITHMAN, John, an alderman and member of parliament of the city of London, well known as an advocate of popular rights; born in Denbighshire 1765, died 1833.

WAKE, Sir Isaac, an ambassador of the time of James I., born at Billing, in Northamptonshire, where his father was rector, about 1575, died 1632. He wrote several works, the principal of which is his 'Rex Platonicus,' of which six editions were published.

WAKE, William, archbishop of Canterbury, a prelate of great learning and ability as a theologian, was born at Blandford, in Dorsetshire, 1657. He became bishop of Lincoln in 1705, and archbishop in 1716. The most remarkable circumstance in his history was his correspondence with the Jansenists, the end of which was to promote a union of the French and English Churches. Died 1737.

WAKEFIELD, Gilbert, a classical scholar and theologian, originally a curate in the Church of England, was born at Nottingham in 1756. He left the church to accept the situation of classical teacher at Warrington, from which, in 1790, he removed to the dissenting college at Hackney. In less than a year this engagement was also brought to a close, and Mr. Wakefield gave himself up freely to opposition politics, and attacks upon the religious systems, especially of the Church of England. His 'Letter to the Bishop of Llandaff' led to his prosecution and imprisonment for two years in Dorchester gaol. He was liberated in May, 1801, and died of typhus fever in the September following. He is author of several learned works, besides some of temporary interest.

WAKEFIELD, Priscilla, authoress of numerous works, designed to promote the education and moral improvement of the young, was born of Quaker parents, named Trewman, in 1750, and died at Ipswich 1832. Her benevolent disposition was further shown by the foundation of savings banks, originally promoted by her for the benefit of the industrious poor.

WAKEFIELD, Robert, a distin. Hebraist, and minister of the Church of England, died 1537.

WALBAUM, J. J., a Ger. naturalist, 1724-99.

WALCH, A. G., a German writer, 1736-1801.

WALCH, B. G., a German *savant*, 1756-1805.

WALCH, J. G., a German theologian and philologist, 1693-1775. His son, J. E. Emmanuel,

a learned theologian and naturalist, 1725-1778. CHR. W. FRANCOIS, brother of the latter, an ecclesiastical historian and theologian, 1726-1784. C. FREDERIC, a third br., a jurisconsult, 1734-99.

WALDAU, G. E., a German *savant*, born 1745.

WALDEGRAVE, JAMES, earl of, an eminent statesman, governor of the prince of Wales, son of George II., author of Memoirs, 1715-1763.

WALDEMAR I., called 'the Great,' king of Denmark, born 1131, succeeded Eric V., 1147. His reign was illustrated by expeditions against the pirates of the Baltic, and he compelled Magnus VI., king of Norway, to sign a humiliating treaty; died 1181. WALDEMAR II., called 'the Victorious,' younger son of the preceding, succeeded his brother, Canute VI., 1202. He made many warlike expeditions into Sweden, Norway, and Germany, created a powerful navy, and revised the laws of his kingdom; died 1241. WALDEMAR III., eldest son of the preceding, was regent from 1219 to 1231. WALDEMAR IV., third son of Christopher II., was in Bavaria at the death of his father in 1333. In 1340-4 he recovered part of his kingdom by force of arms, and obtained some further successes against Sweden in 1353 and 1357; eventually, however, he was glad to obtain peace by making some sacrifices; died 1376.

WALDENSIS, THOMAS, a learned English Carmelite, born at Walden, in Essex, about 1367. He became the champion of the church against the reformers of the reign of Henry IV., and in that of Henry V., whose favourite he was, rose to be provincial of his order and a privy councillor. Henry V. died in his arms, and he himself departed this life while attending the youthful monarch, Henry VI., in France, 1430.

WALDO, PETER. See VALDO.

WALDIS, B., a German fabulist, died 1554.

WALDKIRCH, JOHN RODOLPH DE, a Swiss jurisconsult and historian, 1678-1757.

WALE, ANTHONY DE, a Flemish theologian and adversary of the remonstrants, 1573-1639. JOHN, his son, a physician and anatomist, 1604-1649.

WALES, WILLIAM, an English mathematician, who accompanied Captain Cook on his second voyage in the character of astronomer, and was finally secretary to the Board of Longitude, author of several astronomical works, 1734-1798.

WALINGFORD, RICHARD, abbot of St. Albans, known as an astronomer and historian, 14th cent.

WALKER, ADAM, an experimental philosopher and lecturer, was born in Westmoreland 1732, and brought up as a weaver, but devoting all his spare time to self-improvement, was early qualified for a place in the intellectual world. He was settled in London as a professional man in 1778, and died there in 1821. Besides his works in experimental philosophy, he invented the Eidouranion, or transparent orrery, the revolving lights in the islands of Scilly, and several useful machines. His son, WILLIAM, was also a lecturer on astronomy, and flourished 1766-1816.

WALKER, CLEMENT, a presbyterian and political writer of the time of Cromwell, was born at Cliffe, in Dorsetshire, and educated at Oxford. Previous to the civil wars he was usher of the exchequer, but at the commencement of those stirring times he became, in 1640, member of parliament for Wells. His 'History of Independency' and 'Cromwell's Slaughter House,' were the occasion of his committal to the Tower in 1649, and he died there 1651.

WALKER, SIR EDWARD, clerk to the privy council in the time of Charles I., known as a heraldist and historian, died 1677.

WALKER, GEORGE, a dissenting minister and teacher of theology, better known as a mathematician by his 'Doctrine of the Sphere,' was born at Newcastle-on-Tyne about 1734. He was one of the ministers of the high pavement meeting in Nottingham, and, after that, theological tutor at a dissenting academy in Manchester. Died 1807.

WALKER, GEORGE, famous for his defence of Londonderry against James II., was born of English parents at Tyrone, and became a minister in the Irish Church. He was killed at the battle of the Boyne shortly after his promotion to the bishopric of Derry, 1690.

WALKER, JOHN, a minister of Exeter, author of 'An Attempt towards Recovering an Account of the Numbers and Sufferings of the Clergy who were Sequestered in the Rebellion,' d. about

WALKER, JOHN, a well-known lexicographer, was born at Friern Barnet, in Middlesex, and lived by the profession of a schoolmaster, lecturer, having, however, first studied elocution with a view to the stage. His works are a 'Critical Pronouncing Dictionary,' 'A Rhyming Dictionary,' 'Elements of Elocution,' 'Rhetorical Grammar,' 'Outlines of English Grammar,' and 'Key to the Classical Pronunciation of Greek, Latin, and Scripture Proper Names.' Died

WALKER, JOHN, a physician and geographical writer, who, at the time of his decease, was physician of the London Vaccine Institution; born at Cockermouth, in Cumberland, 1759, died 1830.

WALKER, OBADIAH, a Roman Catholic divine and writer on education, 1616-1699.

WALKER, R., a portrait painter, 17th cent.

WALKER, S., an English divine, 1714-176

WALKER, T., an English actor, 1698-1743.

WALKER, T., a humorous writer, who held the office of a police magistrate, 1784-1836.

WALKER, W., a learned divine, died 1684.

WALL, EDWARD, belonging to an ancient Irish family, was the chief promoter of the rebellion in that country in 1641, and, after the death of Charles I., succeeded the marquis of Ormond as viceroy. He was defeated by Cromwell, and escaped to France, where he died 1651.

WALL, JOHN, a physician and medical writer, chiefly remarkable for his researches to discover materials proper for china ware, and the great promoter of that manufacture in Worcester. He also discovered the virtues of the Malvern waters. 1708-1776. His son, MARTIN, an eminent physician, professor at Oxford, 1744-1824.

WALL, WILLIAM, vicar of Shoreham, in Sussex, author of a 'History of Infant Baptism,' and 'Critical Notes on the Old Testament;' died 17

WALLACE, SIR WILLIAM, the national hero of Scotland, is supposed to have been born about the middle of the thirteenth century. Like those of all men immortalized in the early history of nations as the vindicators of their independence, his life has been coloured and amplified by the admixture of legendary poetry with fact. It is, however, to be remarked as to Wallace, that

in the documentary sources of history has to prove the main features of his career— gathered by his personal influence a large f followers—that though of humble origin ame governor of Scotland—that he gained victories, and was the object of the special nce of the English monarch. He is gener- id to have been the son of Sir Malcolm e of Elderslie, near Paisley, a man of an- amily, though not of high rank. That he nself knighted, and held the title of 'Sir,' r, is shown by the documents of the day. sual to speak of the higher Scottish nobi- the period as basely deserting their country ving the national contest to be headed by man who was faithful among the faithless. must be remembered that the nobility were Norman origin, whose sympathies natu- ere with the court of their national leader, orman king of England. The northern chiefly of Saxon origin, were now made to e regal and aristocratic oppression under the Saxons of England had been governed he conquest. It is natural to suppose that e's family belonged to the old gentry, who e ascendancy of the Normans, as Cedric the is so picturesquely made to do in Ivanhoe, at the young man feeling his capacity for sk, became the leader of his oppressed ymen, while the Norman nobles stood aside mbition opened up for some of them a pros- f dominion in the liberated country. His nflict with the English power is attributed mantic origin. Engaged in a dispute with oldiers in Lanark, the lady of his affections him refuge. She was slain by the for- on whom the young lover in his turn took engeance. Being thus fairly at feud with ading power, he gathered around him a ly increasing body of his countrymen, and last joined by such aristocratic leaders as s, Murray, and young Bruce, when Edward rce to quell them in 1297. These followers sufficient reliance on their leader, and w exceptions made a separate submission. , however, still keeping together his hum- owers, attacked and defeated the English the plains of the Forth, near Stirling

The country appeared to be entirely l, and the successful leader carried his ross the border to make retaliation on Eng- protection granted by him to the mon- f Hexham, dated 7th November, 1297, is the few documents relative to him which n preserved. He assumed the title of re- the kingdom, but the haughty nobles who ew ties to Scotland, viewed his career with alousy than gratitude. Edward, who was during the reverses sustained by his forces, l, with his accustomed energy, to strike a blow, and on the 22d of July, 1298, the h king in person gained over him the victory kirk. For some time Wallace led a wan- life, and conducted a sort of guerilla ntil the year 1303, when he was taken pri- He was removed to London, and on the August, 1305, executed under the English law, with every circumstance of cruelty nominy that could be devised. The English populace sympathized with his fate as that of a fellow-countryman rather than an enemy. [J.H.B.]

WALLENBOURG, JAMES DE, an Austrian diplomatist and Orientalist, 1763-1806.

WALLENSTEIN. ALBERT WALLENSTEIN, duke of Friedland, born in 1583, was the most renowned German commander during the first half of the THIRTY YEARS' WAR. He was of a noble family, and greatly increased his wealth and power by marriage. When the Danes took part in the struggle between the catholics and protestants in Germany, Wallenstein offered the emperor Ferdinand II. to raise and maintain an army of 50,000 men at his own expense, on condition that he was to have the uncontrolled command of them, and the privilege of indemnifying himself from the territories that they conquered. The emperor accepted these terms, and Wallenstein raised his army of volunteers, gained repeated victories over the Danes and their allies, and overran nearly the whole north of Germany, though he was checked by the heroic resistance of the town of Stralsund. But the violence of his proceedings, and his haughty demeanour, excited the jealousy of many of the catholic princes against him; and the emperor deposed him from his command in 1629. Wallenstein retired with calmness; relying on the promises of a favourite astrologer that he would soon be gloriously restored. This actually took place in 1632. The Swedish hero Gustavus Adolphus had appeared in the meantime on the scene of war, and had crushed the imperialist armies. Tilly the emperor's favourite general had been killed in action with him; and Ferdinand now trembling for his personal safety implored Wallenstein to resume the command. Wallenstein consented, but on terms of even more haughty independence than before. Such was the confidence that the soldiery placed in him, and such was the magic of his name, that the warlike youth of Germany crowded around his standard, and in a short time he encountered the Swedes at the head of a powerful and well-equipped army. He had the advantage over Gustavus and his Saxon allies in the early part of the campaign. He recovered several provinces from them, and defeated Gustavus when the Swedish king attacked his camp at Nurnberg. Wallenstein afterwards lost the great battle of Lutzen (Nov. 10, 1632) in which Gustavus fell; but Wallenstein re-organized his army in Bohemia, and was expected by the Austrian court to press hard on the German protestants and Swedes now that they were deprived of their great king. Wallenstein, however, remained inactive, and was accused by his enemies at Vienna of intriguing with the Swedes, with the view of making himself king of Bohemia. He was also hated on account of the comparative liberality of his religious opinions by the monks and Jesuits, who were all powerful in the emperor's councils. He was assassinated Feb. 25, 1634, by an Irishman named Butler, and some other foreign officers in his army. His murderers were rewarded by the emperor, and the vast possessions of the duke were confiscated. Historians have differed as to the reasonableness or unreasonableness of the suspicions that were entertained of Wallenstein's loyalty; but there can be no difference of opinion as to the deep atrocity of his taking off. [E.S.C.]

WALLER, EDMUND, was one of the most famous of English poets, for many years both before and after the Restoration; and his celebrity was not completely eclipsed till, in the course of the present century, our older poetical literature came to be more justly appreciated, and strength of imagination and feeling to be estimated more highly than elaborate correctness of form. Waller's works are verses of society and celebrations of public persons and events, with a large number of love-poems. Much inferior, not to Donne and Cowley only, but to several others of their class, both in imaginative force and in tenderness of emotion, he has a fine grace of fancy and diction, a wise purity of taste, and greater skill and care than almost any other poet of his age in the finishing and rounding off of his smaller compositions. His versification is exceedingly sweet; and he has unquestionable merit as a forerunner of Dryden in the improvement of the heroic couplet.—Waller, born in Hertfordshire in 1605, succeeded in childhood to a large patrimonial estate; and he added to his fortune by a wealthy marriage. It was before a second marriage that he paid unsuccessful addresses to Lady Dorothea Sidney, commemorated in his poems by the name of Sacharissa. After having been a member of the House of Commons in early youth, he sat again on the reassembling of parliament by Charles I. in 1640. At first he took his position with the party of Hampden, who was his cousin, and through whom he was connected also with Cromwell. But his vacillating temper soon showed itself; and, on the breaking out of the civil war, though he continued to sit in parliament, he was active in opposition to the proceedings of the house. In 1643 he was arrested for participation in a plot, said to have been intended for raising the Londoners on the king's behalf. Several of the plotters, and among them a brother-in-law of Waller's, were executed; and he himself escaped only through abject submission, and the most cowardly betrayal of the secrets of his friends. He was heavily fined, and banished from the country: but after the establishment of the Protectorate, Cromwell allowed him to return from France; and he took up his residence at a house he had near Beaconsfield, in Buckinghamshire. Poetical panegyrics on the Lord Protector now flowed freely from his pen; and it was quite characteristic of the man, that, on the Restoration, these were followed by verses 'To the King, on his Majesty's Happy Return.' He sat repeatedly in parliament even in his extreme old age; and, though he was neither trustworthy nor trusted, his liveliness of talk, and his felicitous readiness of wit, made him one of the favourite speakers of the house. He died in 1687, and lies buried beside Edmund Burke. [W.S.]

WALLER, SIR WILLIAM, a famous general of the parliamentary army in the civil wars, born in Kent 1597, died 1688. His career was not unsuspected by the independents, and at the restoration he became one of the members for Middlesex. He wrote a 'Vindication of his Character and Conduct,' and 'Divine Meditations.'

WALLERIUS, JOHN GOTTSCHALK, an eminent Swedish naturalist, professor of chemistry, metallury, and pharmacy, at Upsala, 1709-1785.

WALLIN, G., a Swedish Orientalist, 1686-1760.

WALLIS, JOHN, an eminent mathematician, who held the office of archivist and Savilian professor of geometry at Oxford, born at Ashford, in Kent, 1616, died 1703.

WALLIS, S., an English navigator in 1766-68.

WALLIUS, or VAN DER WALLE, JAMES, a Jesuit and Latin poet, French Flanders, 1599-1689.

WALLOT, J. J., a German astronomer, settled as professor at Paris, executed 1794.

WALMESLEY, CHARLES, a Roman Catholic divine and doctor of the Sorbonne, known as a mathematician, 1721-1797.

WALPOLE, SIR ROBERT, better known by his name in the House of Commons, than by his peerage title as earl of Orford, was born at Haughton, his father's family mansion, on the 26th of August, 1676. His father dying in 1700, he succeeded to his estate, and entered parliament. His education, like that of other country gentlemen in that age, was extremely imperfect, and it has been said, that as he knew nothing of French, he and George I., who could not speak English, had to discourse in state questions in bad Latin. His main power were a capacity for business and a knowledge of mankind. In 1708 he was made secretary at war. He was attacked, along with Marlborough, by the Tory government, which negotiated the treaty of Utrecht, and committed to the Tower on a charge of accession to commissariat peculation. With the Hanover accession came, of course, restoration to influence, and the power of triumphing over his enemies. He immediately entered on high office, but the foundation of his unexampled reign as ministerial power, was in the dexterity and success with which he adjusted the losses caused by the South Sea scheme, so as to make their pressure fall least on those who were least culpable. From 1721 until 1742 he governed the British empire, and during that period, though more than once enemies or rivals appeared to be on the eve of supplanting him to the ground, he righted himself by his own admirable dexterity. He was a friend of peace, and preserved it until a European war became his downfall came together. The country owed to his government the origin of many important projects of practical statesmanship. Among the valuable of these was the plan for suspending the exaction of duties until commodities are brought to market, by the arrangement now so well known as the bonding system. The excise scheme, as it was termed, in which he proposed to bring this system into practice, was so pertinaciously denounced by popular opinion, under the well-known cry, 'Liberty of property, and no excise,' that he required to abandon it. Among his good qualities may be mentioned his clemency towards his political opponents, and a desire rather to baffle them, than let them be involved in dangerous schemes. But on the other hand, there is no doubt that the charges of corruption made against him are well founded. In carried out his objects in government he used how this was done, and he did much to verify his own axiom, that every man has his price. His habits and manners were coarse as those of a fox-hunters of his day, and we find his son, Horace in a party of ladies of the younger and more fastidious generation, nervously anxious lest his father should say things to drive them from the room. His first wife was a daughter of Sir John Haunton,

of London, but he afterwards married
s, Miss Skerret, an event which the
Marlborough loudly proclaimed, but
's elaborate biography does not men-
fatal majority against him, which
his power was gone, was characteris-
gh in an election case. It occurred on
February, 1742. On the 9th he was
of Orford, and on the 11th resigned.
years of misery from unwonted inac-
inful disease, he died on 18th March,
[J.H.B.]

LE, HORACE, born in 1717, was the
f Sir Robert. On leaving Cambridge,
on the continent with the poet Gray,
itive man of letters and the supercilious
k quarrelled and parted. For more
ter of a century from 1741 he sat in
of Commons; but, though he made
es, he was neither a distinguished nor
mber. Government sinecures conferred
his father made up his income to nearly
nd a-year. Thus enabled to indulge
indolence, he spent his life in luxurious
atching and satirizing his political and
contemporaries, coquetting haughtily
ure and literary men, with art and
lding at Twickenham his Gothic toy-
Strawberry Hill, and filling it with
and ornamental nicknacks. In his
rth year, by the death of his nephew,
d to the Earldom of Orford; but the
de no change in his habits. He died
terwards, in 1797.—Horace Walpole's
ductions never rise above the character
ss: but, in their several ways, all of
ever; and the best of them are among
st of their kind. Neither his 'Anec-
inting in England,' nor his 'Catalogue
d Noble Authors,' would suffice to pre-
eputation which, professing to despise
longed for vehemently. He attempted
considerable success, the adventure of
composition; in the romance of 'The
Otranto,' (1764), and the exaggerated
'The Mysterious Mother,' (1768). He
t home in his 'Memoirs of the Reign of
,' and the 'Memoirs of the Reign of
.,' the bitterness of which has some
his just indignation at the ill-usage
his father. But the permanence of his
sts on his 'Letters,' which offer a min-
ure of society and public life for the
t of his long life. They are cynical and
in the extreme, but always full of keen
and lively description, and frequent
f pointed wit; and the style, though
ed by great labour, possesses a masterly
nd apparent ease. Both the Memoirs
tters were, by his own order, reserved
ation till after his death. [W.S.]

LE, HORATIO, Lord, brother of Sir
eceding article, was born in 1678, and
l offices under government. Besides
amphlets, he wrote an 'Answer to
e's Letters on History.' Died 1757.

, EDWARD, an Irish physician and
on, author of 'A Narrative of the Ex-
Holland,' &c.; died 1832.

WALSH, PETER, an Irish priest and political writer, who became professor at Louvain, and on his return to Ireland persuaded many of the clergy to subscribe a declaration disclaiming the pope's temporal authority; died 1687.

WALSH, WILLIAM, a gentleman of Queen Anne's household, known as a poet, 1663-1708.

WALSINGHAM, SIR FRANCIS, one of Queen Elizabeth's eminent statesmen, was born at Chislehurst, in Kent, 1536. He was first employed by Cecil as ambassador to the court of France in the period 1570-1577, and then became one of the secretaries of state, and received the honour of knighthood. In 1586, three years after he had gone as ambassador to Scotland, he formed one of the Commission for the trial of Queen Mary, and when he died, in 1590, was chancellor of the duchy of Lancaster. While Walsingham was in France the massacre of St. Bartholomew took place, and his enmity to Mary Stuart was well grounded in his knowledge of the dark machinations of the Roman Catholics. Queen Elizabeth, who had a vein of humour in her composition, and frequently addressed her ministers in a sportive manner, called him her *moon*, and in such a night as threatened Europe at that time, she had reason enough to congratulate herself on having a counsellor so honest and sagacious. He possessed political knowledge and foresight in a remarkable degree, and though it is said he was puritanically inclined, no man could have drawn a more distinct line where he believed, rightly or wrongly, that the toleration of princes should cease. Walsingham deserves honourable remembrance also for the steady fidelity to his principles which he displayed at the French court, and his bold remonstrances with the king. His Despatches are highly interesting, and may be consulted in the work of Sir Dudley Bigges. [E.R.]

WALSINGHAM, THOMAS, a monk of St. Albans, historiographer-royal to Henry VI., about 1440, author of English chronicles.

WALTER, JOHN, late proprietor of the *Times* newspaper, and member of parliament, deserves honourable mention as the first to raise the character of the daily press, and bring the steam engine to its aid. He was born in 1773, and undertook the exclusive management of the *Times*, in the character of joint proprietor, in 1803. The successful application of the steam engine in this enterprise dates from 1814. Mr. Walter represented Berkshire in parliament from 1832 to 1837, and was returned for Nottingham in 1841; d. 1847.

WALTER, JOHN GOTTLOB, an eminent Prussian anatomist, 1734-1818. FREDERIC AUGUSTUS, his son, also an anatomical writer and professor, 1764-1826.

WALTHER, B., a German astronomer, d. 1504.

WALTHER, G. C., a jurisconsult, 1601-1656.

WALTHER, M., a German preacher and theologian, 1593-1662. AUGUSTIN FREDERIC, his son, an anatomist, author of a Treatise on the Tongue, 1688-1746.

WALTHER, R., a Swiss theologian and Latin poet, 1519-1586. His son, ADOLPHUS, a Latin poet of remarkable talent, 1552-1577.

WALTON, BRIAN, bishop of Chester, and editor of the London Polyglott Bible, 1600-1661.

WALTON, IZAAC, a well-known writer on ang-

ling, was born at Stafford in 1593. He died in 1683. Though his education was not a remarkably good one, and though he made in after life no pre-

[House of Isaac Walton.]

tensions to learning, he yet became one of the most popular authors of the time in which he lived. He was originally a linen-draper in London, but acquiring a competency, he was enabled to retire from business and leave town. He was a pious man, of a thoughtful contemplative turn of mind, and during the time he was in business was exceedingly fond of fishing. The river Lea was his darling haunt (still a favourite spot for Cockney anglers), and there he spent as much of his time as he could spare from his shop, in angling and contemplation. In 1653 he published his famous work, 'The Complete Angler, or Contemplative Man's Recreation.' In this work he introduced a good deal of information upon the habits of fresh water fishes, and figured with considerable accuracy many of the species of which he treats. The air of verisimilitude and unaffected benevolence which this work exhibits has made it the most popular book of its kind ever written; a popularity which after the lapse of 200 years it still enjoys amongst the lovers of the 'gentle craft.' Walton was considered the most expert fisher of his time, and has been called the father of anglers. He spent a great part of his latter years in the society of eminent divines, and has left behind him several biographical memoirs which are still highly thought of. He lived to the age of ninety. [W.B.]

WAMESE, J., a French jurisconsult, 1524-90.
WANGENHEIM, F. A. J. De, a Prussian Orientalist and writer on forest botany, 1747-1800.
WANLEY, Nathaniel, rector of Trinity Church, in Coventry, author of 'Self-Reflection,' 1633-1680. His son, Humphrey, a learned literary antiquary, secretary to the Society for Promoting Christian Knowledge, and librarian to the earl of Oxford, 1672-1726.
WANSLEBEN, or VANSLEB, John Michael, an Oriental scholar, and traveller in Abyssinia and Egypt, born in Thuringia 1635, died 1679.
WARBECK, Perkin, or Peter, a pretender to the English throne, who assumed the character and title of Richard, duke of York, one of the princes supposed to have been murdered in the Tower. Being defeated in arms, he was executed in the reign of Henry VII., 1499. Some obscurity still remains about his history.

WARBURTON, Eliot B. G., an English novelist and miscellaneous writer, died 1851.
WARBURTON, John, a heraldist and antiquarian, author of 'Vallum Romanum,' 1682-1759.
WARBURTON, Wm., D.D., a distinguished bishop of the English Church, was born at Newark in 1698. Having acquired the elements of education at the grammar school of his native town, he served an apprenticeship to an attorney, and after the expiry of his term, opened chambers as a legal practitioner. Tiring, however, of the law, he turned his views towards the church, and was admitted to deacon's orders in 1723. The legal studies of his early life exercised a powerful influence in moulding his habits of thought as well as his treatment of controversial subjects; and to the non-professional course of his preparation for the church, must be ascribed that dislike to the routine of the regular discipline, and that pride he took in confounding the adherents to the beaten paths of theology, which formed one of the most peculiarities in his character. Naturally a strong, domineering temper, his arrogant dogmatism, united to great skill and power in wielding weapons of dialectic controversy, led him into propounding and supporting paradoxes, which all his great learning and acknowledged acuteness, rendered him an unsafe guide. By the his natural and acquired talents, however, he to distinction in the church. In 1726, he in this latter place, he prepared several the press; the principal of which are the Causes of Prodigies and Miracles on the Legal Judicature of Chances Translations. These were soon followed productions of a higher character, between Church and State, which was lished in 1738, and the first volume Legation, which appeared towards the same year. Although both of these buted to establish his fame as not to either of them directly, but duction of his able pen that he was elevation to episcopal dignity. dication of Pope's Essay on Man introduced him to an acquaintance but procured him the friendship Bath, through whose influence age of the crown. He was chaplain to the king, prebendary Bristol, and bishop of Gloucester the conduct of the controversy delight and pride to carry burton often presented a picture ness of the Christian character palpable defects, he was habitual piety—of a temper benevolence, and a reign been surpassed, for the anity, as the greatest His death took place in

WARMHOLTZ, CHARLES GUSTAVUS, a Swedish bibliographer, 1710-1784.

WARNER, FERDINANDO, a doctor and clergyman of the Church of England, author of a great number of works, theological, biographical, and historical, 1703-1768. JOHN, his son, a writer on prosody, and translator of the history of 'Friar Gerund,' from the Spanish.

WARNER, JOHN, bishop of Rochester, distinguished for his learning and munificence, and as a royalist at the period of the rebellion, 1585-1666. Among his charitable works may be mentioned the foundation of Bromley College, for twenty widows of royal and orthodox clergymen, and four scholarships in Baliol College for young Scotchmen.

WARNER, J., an eminent surgeon, 1717-1801.

WARNER, RICHARD, a botanist, 1711-1775.

WARNER, WILLIAM, an English scholar and poet, mentioned among the early writers to whom we owe the refinement of our language, 1558-1609.

WARNERY, C. E., a French officer and writer on tactics, in the Polish service, 1719-1786.

WARREN, C., a steel engraver, died 1823.

WARREN, SIR JOHN BORLASE, an English admiral, employed in the expedition to Quiberon, destined to assist the Vendeans, was born at the seat of his family at Stapleford, in Nottinghamshire, 1754. After the Vendean expedition he joined the Brest fleet under Lord Bridport, and distinguished himself in 1798 by capturing the French squadron sent to invade Ireland. On the conclusion of peace he became a privy councillor, and was sent as ambassador to Russia; died 1822.

WARREN, SIR PETER, vice-admiral of the red, was born in Ireland 1703, and won his laurels by the capture of Louisbourg, and the total defeat of a French squadron sent to recover it, 1745-1747. In the autumn of the last-mentioned year his popularity occasioned his return to parliament as member for Westminster; died 1752.

WARSEWITZ, C. STANISLAUS, a Polish statesman, historian, and Jesuit; died 1605.

WARTON, JOSEPH and THOMAS, were brothers, and very like each other in pursuits and mental character. They share with Bishop Percy the honour of having given the first perceptible impulse to that revolution in literary taste, which dethroned Pope and the Didactic school of poetry, and led poets and critics to a renewed study both of nature and of Old English literature. The Wartons have a place, likewise, among our minor poets; but in this character even Thomas possesses but small merit. They were sons of a clergyman, who was professor of poetry at Oxford, and afterwards a vicar in Hampshire. Joseph was born in 1722, and lived till 1800. Thomas, born in 1728, died in 1790.—Dr. Joseph Warton was the more active and independent thinker of the two; and students of the principles of criticism have, since his time, estimated, more justly than did his contemporaries, the value of his 'Essay on the Genius and Writings of Pope.' It was published, in separate parts, in 1756 (the same year with Percy's Reliques) and 1782. But Warton, a poor man during all the best period of his life, was diverted from systematic study and speculation by the toils of clerical duty, and after-

wards by those of teaching. He taught for nearly forty years in Winchester School, of which for twenty-seven years he was head master.—Dr. Thomas Warton, being content to remain in the celibacy of Trinity College, Oxford, was able to devote himself without interruption to his favourite pursuits. He held the professorship of poetry for the usual ten years from 1757; and in 1785 he was appointed poet-laureate and Camden professor of history. Besides writing a good deal of poetry, and several miscellanies and pieces of humour, he creditably edited Theocritus and one of the Greek Anthologies. But his really valuable efforts were made in the criticism of Early English literature. His earliest performance of this sort was the 'Observations on the Faerie Queene of Spenser,' published in 1752, and much enlarged in 1762. His great work, 'The History of English Poetry,' appeared in three successive volumes, in 1774, 1778, and 1781. He lived to write only a small portion of a fourth volume; and the work closes abruptly near the beginning of Elizabeth's reign. It is ill-digested, desultory, and often very loose in reasoning: it contains many serious gaps, and very many positive errors, in detail. But even its mistakes and deficiencies are fewer than we might have expected from the first pioneer in so rugged a field; and the value of the book makes it well worth the trouble which has been expended on it, in corrections and additions, by its recent editors, Price and Taylor. Its antiquarian learning is very great; the poetical taste of the author is remarkably fine; and the flowing and animated eloquence, which breaks out whenever the occasion permits, makes many parts of it as interesting as anything we have of the sort. [W.S.]

WARWICK, a famous baronial name in England; the principal of those who have borne it are —Guy of Beauchamp, commonly called Guy, earl of Warwick, a party to the league against Edward II., by which the favourite, Piers Gaveston, was beheaded, 1312. Richard, a favourite of Henry V., distinguished in the French wars, and regent in the time of his successor; died 1439. Richard Neville, earl of Warwick, called the King Maker, slain at the battle of Barnet 1471. Edward, grandson of the latter, beheaded by Henry VII. 1499.

WARWICK, Sir Philip, secretary to Charles I., and member of the long parliament, author of a 'Discourse on Government,' and 'Memoirs of the King,' 1608-1682.

WARWICK, Vibrand Von, a Dutch navigator, who prepared the commercial relations between Holland and the Chinese in 1606.

WASER, Anna, a Swiss painter, 1679-1713.

WASER, Gaspard, a learned Swiss Orientalist and antiquarian, 1565-1625. His son, John Henry, a diplomatist, 1600-1669.

WASER, H., a Swiss minister and economist, author of 'Chronologie Diplomatique,' 1742-1780.

WASHINGTON, George, was born in Westmoreland in the state of Virginia, on the 22d of February, 1732. His father was affluent, but George received merely the ordinary education of the young American colonist of the day, which was always meagre, unless when the ambitions parents sent a son to the home country. He had, however, but scanty literary or artistic tastes, and studied only the accomplishments which aided his practical views. Though it has been questioned if he knew any language but English, it is understood that he studied French after the responsibilities of command had fallen on him, for the purpose of holding communication with the auxiliaries sent from France to join the army of independence. On the other hand, his practical acquirements were precociously developed. When but sixteen years old he was employed in surveying the vast wilderness assigned to his connection, Lord Fairfax, in the district of the Allegany mountains. He pursued the profession of a surveyor, which in a country full of estates, utterly unknown in character and extent to their owners, was a lucrative one; and he is said to have thus obtained an unconscious training for his subsequent warlike operations by acquiring a minute acquaintance with some parts of the country, and a knowledge of the general characteristics of the whole. Before he was twenty years old he received an important command, as adjutant-general of one of the military districts into which Virginia was divided to resist the Indians, and his genius entitled him to more important command in the American war with France in 1754. In a mission across the frontiers to ascertain the objects of the French, he discovered by his extraordinary sagacity the views of aggrandizement which led ultimately to the destruction of French power in America. He distinguished himself in the war which then broke out, and as all this occurred before he was twenty-three years old, his history decidedly supports the theory that the faculty of the military commander is generally developed early in life. It is believed, indeed, that many of the early calamities of that war might have been obviated if veteran British commanders had paid more respect to the sagacity of the young Virginian. In 1759 he married Mrs. Martha Curtis, a widow. She brought considerable property to add to Washington's large estates, and for some years his hands were as full of business, in the management of private property and attendance on the provincial legislature, as they ever afterwards were when he was at the head of the Union. It was one of his peculiarities that he carried out small matters with the same articulate organization as large. He slurred over nothing, and his household books, of which fac-similes have been extensively circulated, would have stamped him as a pedantic trifler, had they not exemplified the same rigid adherence to system and accuracy of detail with which he subsequently organized the government of a great nation. He took an unnoticeable but active part in his own province, in the preparations for the assertion of independence. He was appointed one of the delegates from Virginia to the first general congress in 1774, and had the command of the independent companies of the state. Still, his position had never been brilliant or even conspicuous, and it is perhaps the most remarkable instance of that common sense which characterized the revolution, that the supreme command of the army of independence should have fallen into his hands. He became commander-in-chief on 15th June, 1775. To give his history from that period until, after completing the task assigned to him, he resigned his command at the close of the year 1783, would be to give a history of the American

war of independence. It may be only generally remarked of his career, that it was almost to the conclusion a struggle not only against the British force, but the turbulence and factiousness of those who were influential in the new states and their army. It cannot be said that the brilliancy of his achievements gave him his great influence, for he was often beaten, and it was by taking advantage of what his troops learned in hardships and defeats, that he was at last able to accomplish the sagacious and deeply planned movement by which Cornwallis was surprised and found it necessary to surrender. He was inaugurated as the first president of the United States, on the 30th of April, 1789. How he presided at the organization of a new empire, and regulated the enthusiasts, or self-seekers, who struggled for their peculiar objects, is, like his military career, matter of history. On more than one occasion, if he could not with certainty have achieved life-long despotic power, he might have acquired the flattering title of king, but it was his great merit that he sought only as much power and greatness as enabled him to do his duty, and no more. He retired from public life in 1796, and died on the 14th of December, 1799, leaving a reputation without a stain. [J.H.B.]

[Tomb of Washington.]

WASMUTH, M., a Danish Orientalist, 1625-88.

WASSE, Cornelia Wouters, Baroness Von, a female writer of Brussels, 1739-1802.

WASSE, Joseph, a native of Yorkshire, distinguished for his classical learning, 1672-1738.

WASSENAER, N. J., a Dutch physician and historian of Europe, died 1632.

WASSENBERG, Everard Von, a German historian of the reign of Uladislaus IV., b. 1610.

WATELET, Claude Henry, a French painter and etcher, author of several critical works on art of considerable value, 1718-1786.

WATERHOUSE, Edward, an English divine, known as a heraldist and miscell. writer, 1619-70.

WATERLAND, Daniel, a learned divine, and dignitary of the Church of England, was born at Wasely or Walesly, in Lincolnshire, 1683, and died 1740. His principal works are of a controversial character, written against Jackson and Tindal: a complete edition was published in 11 volumes 8vo, 1823, by Van Milderr.

WATERLOO, Anthony, a Dutch landscape painter and etcher; born about 1618, died 1662.

WATERLOO, G. B., a Latin poet, 1572-1597.

WATRELOS, Lambert, a priest of Flanders, author of a Chronicle of Cambray, 1110-1172.

WATS, Gilbert, an English scholar, d. 1657.

WATSON, David, a learned Scotchman, best known for his version of Horace, 1710-1756.

WATSON, Henry, a gallant East Indian officer and engineer, born at Holbeach about 1737. He distinguished himself at the siege of Belle Isle in 1761, and at the capture of Havannah 1762, but in a still more memorable manner by the works of Fort William; died 1786.

WATSON, James, a Scotch printer, author of a History of the Art in Scotland, died 1722.

WATSON, John, a minister of the Church of England, known as an antiquarian, and historical and miscellaneous writer, 1724-1783.

WATSON, Richard, bishop of Llandaff, author of several learned works, was born at Heversham, near Kendal, in 1737. He first distinguished himself as a natural philosopher, and in 1764 succeeded Dr. Hadley as professor of chemistry at Cambridge; in 1771 he became professor of divinity. The theological works of Bishop Watson are, 'An Apology for Christianity, in a series of Letters addressed to Edward Gibbon, Esq.,' 'An Apology for the Bible,' in answer to Paine's Age of Reason, and many miscellaneous Tracts and Sermons. His philosophical works are chiefly on Chemistry. Died 1816.

WATSON, Robert, a Scottish historian and professor of the *Belles Lettres*, author of a 'History of Philip II.,' born at St. Andrews about 1730, died 1780. Mr. Watson began a History of Philip III., which was completed by Dr. Thompson.

WATSON, T., a nonconformist divine, d. 1690.

WATSON, T., a catholic prelate, died 1582.

WATSON, T., a song-writer, d. 1591 or 1592.

WATSON, Sir William, a physician of London, eminent as a botanist and natural philosopher, especially for his skill in electricity; born in Clerkenwell 1715, died 1787.

WATT, James, the author of improvements in the application of steam as a motive power which have identified his name with the steam engine. Directing the force of an original genius, early exercised in philosophical research, to the improvement of the steam engine, he enlarged the resources of his country, increased the power of man, and rose to an eminent place among the illustrious followers of science and the real benefactors of the world. Watt was born at Greenock, 19th January, 1736, the son of James Watt, twenty years town councillor, treasurer, and bailie of Greenock. Being even in infancy, says M. Arago, of a delicate constitution, the early education of James Watt was in a great measure of a domestic character. His ill health seems to have led him to the cultivation of his intellect with unusual assiduity. It is said that when only six years of age, he was discovered drawing geometrical figures on the hearth with chalk, and other anecdotes related of him justify the remark which was elicited by a friend on the above occasion that he was 'a by ord'nar' wean.'

When about fourteen years of age he made an electrical machine, and there is a curious anecdote related by M. Arago, to the effect that his aunt, Mrs. Muirhead, who did not entertain the same opinion as his father of the powers of the boy, upbraided him one evening at the tea table for what seemed to her to be listless idleness;—taking off the lid of the kettle and putting it on again; holding sometimes a cup and sometimes a silver spoon over the steam; watching the exit of the steam from the spout, and counting the drops of water into which it became condensed. With the increased light imparted by a knowledge of his subsequent career, the boy pondering before the tea kettle, will, as observed by his French enthusiastic biographer, be viewed as the great engineer preluding to the discoveries that were to immortalize him. In 1755, Watt went to London, and placed himself under Mr. John Morgan, mathematical and nautical instrument maker, in Finch Lane, whose business it would appear lay chiefly in making and repairing the instruments made use of in the experiments in mechanics and natural philosophy. Shortly after his return from London, about 1757, when Watt had scarcely attained his twenty-first year, he endeavoured to establish himself in business in Glasgow, but owing to his not being a burgess he met with opposition from the corporation of arts and trades, who refused to allow him to set up even the humblest workshop. To the great renown of the authorities of the university, which is not under city jurisdiction, Watt was offered an asylum within the precincts of the college, where he established a shop, and he was honoured with the title of mathematical instrument maker to the university. The great men of the day—Adam Smith, Dr. Black, Dr. Dick, Professor Anderson, kindly befriended young Watt, and the more intelligent students were his intimate companions. The revival of commercial and manufacturing enterprise in Britain had about this time directed attention to steam as a motive power. As early as 1761 or 1762, Watt made some experiments on the force of steam. But the event to which his invaluable discoveries may be most distinctly assigned took place in the session of 1763-64, when Professor Anderson sent him a model of Newcomen's steam engine to repair. He soon repaired the model, which exists to this day in the museum of the natural philosophy class. While working at these repairs, he was led to detect the imperfections of the machine itself, and to investigate those properties of steam upon which its action depends. About this time he left the college and took up his abode in the town previous to his marriage with his cousin, Miss Miller, the daughter of a 'freeman,' in the summer of 1764. It is not possible to enter here on the nature of Watt's improvements in the steam engine, or to estimate their economical advantages; we must refer to treatises on the steam engine for information on these points. Suffice it here to say, that Watt's invention of a separate condenser, and the necessary modifications of the arrangements of the mechanism of the engine, were in their main features completed as early as 1765. In 1768, the first patent was applied for, and obtained 5th January, 1769. Dr. John Roebuck, the founder of Carron Iron Works, who had aided Watt in preparing his third working model, was a sharer in this patent. Roebuck's affairs got embarrassed in the summer of 1769, and Watt was for the time deprived of the means of prosecuting his inventions. He dedicated himself, however, with great credit to general engineering and surveying during the interval which elapsed before the opportunity presented itself of his finally devoting himself to the carrying out of his improvements in the steam engine. It was while engaged in the greatest engineering work undertaken by him, the surveying and estimating a line of canal between Fort William and Inverness, since executed by Telford on a larger scale than was then proposed, that Watt, in 1778, having been bereaved of his wife, determined to accept an invitation from Matthew Boulton, the founder of Soho, to settle in England. Watt's connection with Boulton commenced early in the year 1774, and they remained in partnership till 1800, when Watt retired from business, but their friendship continued undiminished until Boulton's death. Of the spirited manner in which Boulton conducted the mercantile department of the establishment, some idea may be formed from the fact, that upwards of £47,000 was spent before the patentees began to receive any returns; but at length their remuneration began to pour in, and in no scanty stream. In Cornwall and other mining districts, especially where coal was not abundant, the new engines speedily replaced the old; but down to 1794 the introduction of the steam engine into other three mining districts had been comparatively slow, and it has been stated, that at the expiration of the patent the aggregate power of the engines employed in London was not more than 650 nominal horse power; in Manchester about 450 horse power, and in Leeds about 300 horse power. As above alluded to, a volume would not suffice to exhaust Watt's professional biography, and we must leave our readers to inquire into this elsewhere. Of the private character of the great engineer a most pleasing account is given by Lord Jeffrey, who observes: 'Perhaps no individual in this age possessed so much and so varied exact information, had read so much, and remembered what he had read so accurately and well. He had infinite quickness of apprehension, a prodigious memory, and a certain rectifying and methodizing power of understanding, which extracted something precious out of all that was presented to it.' In social conversation he allowed his mind, like a great cyclopædia, to be opened up on whatever subject might best suit the taste of his associates; and he made everything so plain, clear, and intelligible, that, it is remarked, scarcely any one could be conscious of any deficiency in their own capacity in his presence.—Of a generous and affectionate disposition, he was considerate of the feelings of all around him, and gave the most liberal assistance and encouragement to all young persons who showed indications of talent, or who applied to him for patronage and advice. As his death approached, he was perfectly conscious of his situation, and calm in the contemplation of it, expressing his thankfulness for the length of days with which he had been blessed. He died at Heathfield, near Soho, Birmingham, on the 25th August, 1819. He was fellow of the Royal Societies of London and Edinburgh; correspondent of the French Insti-

tute, and an LL.D. of Glasgow university. By public subscription a monument was erected to him in 1824 in Westminster Abbey, one of the best of Chantrey's works. The countenance of this statue has been characterized as the 'personification of abstract thought.' Other statues by Chantrey adorn George's Square, Glasgow, the University Museum, and the chapel at Handsworth, erected by Watt's only son, who survived him, and who is since dead. [L.D.B.G.]

WATT, ROBERT, a Scotch physician, author of professional works, and of the well-known index of British and foreign literature, entitled 'Bibliotheca Britannica,' 1774-1819.

WATTEAU, ANTHONY, an eminent French landscape painter, b. at Valenciennes 1684, d. 1721.

WATTS, ISAAC, D.D., was a native of Southampton, where he was born on 17th July, 1674. His father was a dissenter, and living at a time when nonconformity was a crime, he several times suffered heavy penalties, both by fine and imprisonment. Isaac early displayed a remarkable precocity; and his greatest delight while a mere child, consisted in reading simple story books. At the age of four he began to learn Latin, and at seven, had attracted no small attention by his talent for versifying. His proficiency in classical studies was so much above the average scholarship of school boys, that some wealthy individuals, desirous of encouraging so gifted a youth, offered to bear the expenses of his education at one of the universities, if his father would have consented to his entering the established church. Prevented by conscientious scruples from accepting this generous offer, the father placed Isaac at a dissenting academy, under the care of the reverend Mr. Rowe, an independent clergyman, eminent both for his piety and learning. At the age of twenty, his academic course was finished, but instead of commencing an active course of preaching, he resolved, with a rare exercise of humility, and distrust of his fitness for the pulpit, to return to his father's house, with a view of acquiring, during a season of religious retirement, those higher qualifications for the duties of the ministry, which no course of academic instruction, however extensive or varied, can supply. It was during this period that he first tried his poetic talents in the composition of sacred poetry; and so much were these sacred songs admired, that on their being collected and published in a little volume, they were unanimously adopted as the hymn-book of the independent chapel where his father worshipped.—After a retirement of two years under the paternal roof, he accepted an invitation from Sir John Hartopp, Bart. of Stoke-Newington, to undertake the office of tutor to his son. In this situation, he enjoyed ample opportunities for self-improvement; and while he was most conscientious in attending to the interests of his youthful charge, he pursued his own studies at the same time, with indefatigable industry; increasing his familiarity with the Hebrew and Greek Scriptures,—perusing the works of the most eminent biblical writers and divines,—forming abridgments of many, and endeavouring to digest his acquired knowlege by the methods he afterwards described in his 'Improvement of the Mind.'—In 1698, Watts entered upon the duties of the ministry, as assistant to Dr. Chauncey, pastor of the independent church, Mark Lane, London; and on the death of that clergyman, was chosen to succeed him on 8th March, 1702. Under the auspices of this eloquent and fervid young preacher, the congregation rapidly increased, and continued for several years in the most flourishing condition, when an alarming illness, brought on by his vehement style of oratory, threatened to put a premature period to his life and usefulness. By due care and attention he recovered; but his physical energies were so much impaired, that he was obliged, first, to employ an assistant, to relieve him of some part of his ministerial duties; and then afterwards, on the recurrence of a violent fever, which gave a severe shock to his enfeebled constitution, he had, at his own desire, Mr. Price associated with him as colleague in the pastoral charge of his congregation. Compelled soon after to resign his public office, he went on a visit to the house of his friend, Sir Thomas Abney, knight and alderman, at Abney Park, Stoke-Newington; and that visit, though designed at first to be for a few days, was prolonged to a residence of more than thirty years. In this hospitable mansion he received all the tender and assiduous attention which his infirmities required; and which were sweetened by the pleasures of cultivated society and Christian friendship. In 1728, the universities of Edinburgh and Aberdeen simultaneously conferred on him the honorary degree of Doctor in Divinity. Seldom has such a title been bestowed on one so worthy to receive it. Dr. Watts' range of knowledge was almost unbounded, and although theology was of course the chief subject of his study, he had mastered the whole circle of the sciences. Dr. Watts holds a respectable rank in the list of British poets. His poetry is chiefly of a devotional cast, and in regard to his hymns, Dr. Johnson has pronounced this high eulogium, 'That for children he condescended to lay aside the scholar, the philosopher, and the wit to write little poems, systems of instruction adapted to their wants and capacities.' Dr. Watts died on 25th November, 1748, in the seventy-fifth year of his age. [R.J.]

[Abney Park, the residence of Isaac Watts.]

WAYNFLETE, WILLIAM OF, so called from his birth-place, in Lincolnshire, was the eldest son

of Richard Patten or Barbour. Commencing his distinguished career as head master of Winchester school about 1429, he became provost of Eton, then in course of foundation by Henry VI., 1442, bishop of Winchester 1447, and lord high chancellor 1456. He founded Magdalen College, Oxford, and, though a true Lancastrian, was highly honoured by Edward IV.; died 1486.

WEBB, F., an English writer, 1735-1815.

WEBB, P. C., an antiquarian, 1700-1770.

WEBBE, GEORGE, a native of Wiltshire, who became bishop of Limerick, and died in the castle of that town, where the rebels had imprisoned him, in 1641. He is the author of several religious works, the principal of which is entitled 'Practice of Quietness, directing a Christian to Live Quietly in this Troublesome World.'

WEBBE, SAMUEL, a great English musician and composer, was born in 1740. In his boyhood he was indentured to a cabinet-maker, but after the termination of his apprenticeship he devoted himself entirely to the study of music. At twenty-six years old he gained a gold prize medal for the best canon from the Catch Club, and from the years 1765 to 1792 he had no fewer than twenty-seven medals awarded to him from the same club for glees, canons, odes, and catches. It was for this club that Webbe composed the famous glee 'Glorious Apollo.' His compositions of the class mentioned amount to one hundred and seven. He composed, besides masses (he was a Roman Catholic) anthems, songs, &c., many of which are still sung. He died in 1817. [J.M.]

WEBBER, JOHN, an ingenious artist, who was appointed draughtsman in the last expedition of Captain Cook; born in London 1751, died 1793.

WEBBER, Z., a Dutch theologian, died 1697.

WEBER, ANANIAS, a German theologian, preacher, and controversial writer, 1596-1765.

WEBER, CARL MARIA VON, one of the greatest of German musicians, was born at Eutin in Holstein, in December, 1786. In 1797 he was taken to Saltzburg and placed under the tuition of Michael Haydn, (brother of the illustrious composer), and here he published his first works. Soon after this he went to Munich, where he received lessons in singing from Valesi, and in composition from M. Kalcher, under whose supervision he wrote music for an opera 'The Power of Love and Wine.' In 1800 his opera the 'Wood Maiden' was brought out, in 1801 'Peter Schlemihl,' and soon after 'Rubezahl,' which afterwards appeared as the composition of Rode. In 1802 he set out on a professional tour through Germany, and in 1806 he went by invitation to Carlsruhe, where he produced several symphonies and concertos. At Darmstadt he composed his 'Abon Hassan,' and from 1813 to 1816 he was director of the opera at Prague. In 1822 he brought out at Berlin his greatest work, 'Der Freischutz,' which produced an immense sensation in the north of Germany, and wherever it was performed. It was put on the stage in London on the 23d of July, 1824. In November, 1823, Weber produced at Vienna his opera of 'Euryanthe,' and in 1825 he accepted from Mr. Charles Kemble the offer of £500 to compose an opera for the English stage. This opera was 'Oberon,' which was brought out at Covent Garden theatre, conducted by Weber himself, on the 12th of April, 1826. Soon after unmistakeable symptoms of pulmonary disease presented themselves, and the health of the great composer sank rapidly, and his illustrious career closed on the 5th of June, 1826, when he was found lifeless in his bed. He was buried in the Roman Catholic chapel, Moorfields, permission to inter him in St. Paul's cathedral having been refused on account of his religion. [J.M.]

WEBER, EMMANUEL, a German historian, poet, and jurisconsult, died 1726.

WEBER, G., a German *savant*, 1632-1698.

WEBER, HENRY WILLIAM, a miscellaneous writer and archæologist, was born at St. Petersburg of German parents in 1783, and having been educated at Edinburgh and Jena for the medical profession, finally settled in Scotland as an author. His principal works are—'Metrical Romances of the Thirteenth, Fourteenth, and Fifteenth Centuries,' 'Explication of Northern Antiquities,' 'The Battle of Flodden Field,' and an edition of 'Beaumont and Fletcher.' Died 1818.

[Birth place of Daniel Webster.]

WEBSTER, DANIEL, was born at Salisbury, in the state of New Hampshire, on the 18th of January, 1782. He was a child of the wilderness, and had for the New England system of education, which pushed, even then, the means of instruction into remote solitudes, he would never have been enabled to bring his great faculties to bear in public life. His acquirements were always scanty when compared to the great intellectual force with which he could apply them. He studied for the law in the joint capacity of attorney and barrister after the American fashion, and in 1807 removed from the obscure village of Boscawen to a larger field of exertion in Portsmouth, the chief town of the state. He was a great forensic orator, and his career at the bar was connected with many leading cases of great public and constitutional interest. In 1812 he became a member of congress, and at once took up a marked, though not a popular position, as he was opposed to the policy of the war with Britain. In connection with this struggle he was thrown into a contest which, reappearing at intervals, occupied more or less a great portion of his legislative exertion. The necessities of the war first suggested large projects for creating a state bank, and an expansive currency, which were opposed by Webster as likely to nourish the American fallacy

of reckless speculation. His policy of watching and adjusting the currency frequently saved the United States from monetary danger, and a remarkable instance of his wise strictness occurred, when by his exertion the payment of revenue in district paper, ever fluctuating, and sometimes 25 per cent. under its nominal value, was abolished, and payments required in States currency. When the question of the rechartering of the bank came back for discussion in 1832, he thought that changes in the constitution of the establishment, and in the wealth and population of the country, justified the measure, and he was ranged among its supporters. In 1826 he became a member of the senate, and was rechosen in 1833. From that time he filled for nearly twenty years the state offices nearest to the highest. That he should have been president, was the natural expectation of other nations, and his disappearance from the scene without having reached that distinction, is one of the instances which show that the Americans, perhaps wisely, are jealous of seeing very clever men in that powerful position. Webster died at Boston on the 24th of October, 1852. [J.H.B.]

WEBSTER, JOHN, an Engl. dramatist, 17th c.

WEBSTER, NOAH, the famous American lexicographer, was born in 1758, at West Hartford, and was descended from one of the earliest English settlers in that colony. Having studied for the law he was called to the bar in 1781, and devoted the whole remainder of his life to literary and professional avocations. Besides his 'Dictionary of the English Language,' a work of amazing industry and research, he wrote 'Sketches of American Policy,' 'The Grammatical Institute,' and other works. He also conducted one of the daily papers of New York. Died 1843.

WEBSTER, THOMAS, a native of the Orkneys, known as professor of geology in the London University, and a writer on that science, 1773-1844. His 'Encyclopædia of Domestic Economy' may be considered the result of his acquaintance with Count Rumford, in whose researches he participated.

WEBSTER, WILLIAM, an English divine, editor of the Life of General Monk, &c., 1689-1758.

WECKERLIN, G. R., a German poet and political negotiator, 1584-1651.

WECKHERLIN, G. L., a publicist and miscellaneous writer of Wirtemberg, 1739-1792.

WEDDERBURN. See ROSSLYN.

WEDEL, C. H., a Prussian general, 1712-1782.

WEDEL, GEORGE WOLFGANG, a German physician and writer of many learned works, 1645-1721. His son, STEPHEN HENRY, a physician, 1671-1709. J. ADOLPHUS, brother of the latter, same profession, 1675-1748. JOHN WOLFGANG, of the same family, a learned botanist, 1708-1757.

WEDGWOOD, JOSIAH, famous for his improvement of the English pottery manufacture, was born at Newcastle-under-Lyne, where his father was engaged in that branch of business, in 1730. He was well versed in natural philosophy, and produced his valuable results after numerous experiments upon the various kinds of clay and colouring substances, joined to a taste for art. He was the benefactor of his country in many other important matters, more especially in the promotion of the grand trunk canal, engineered by Brindley, and of a road through the potteries, died 1795.

WEENINX, or WŒNIX, J. B., a Dutch painter, remarkable for the versatility of his powers, 1621-1660. His brother, JOHN, who excelled in hunting pieces and still life, 1644-1719.

WEERDT, ADRIAN DE, a Flemish landscape painter, flourished at Brussels, 16th century.

WEERDT, SEBALD DE, a Dutch navigator, who was killed at the isle of Ceylon 1603.

WEEVER, or WEVER, JOHN, an industrious antiquarian, supposed to have been born in Lincolnshire in 1576, died 1632. His work is the well-known 'Funeral Monuments of Great Britain,' originally published in 1631.

WEGELIN, JAMES, a native of St. Gall, author of a 'Universal History,' and of a 'Memoir on the Philosophy of History,' 1721-1793.

WEICHMANN, C. F., a German writer, author of 'The Unedited Poetical Productions of the Most Celebrated Writers of Lower Saxony,' died 1769.

WEIDLER, J. F., a Germ. astron., 1691-1755.

WEIGEL, CHRISTIAN EHRENFRIED, a German physician, distinguished as a botanist, last century.

WEIGEL, ERHARD, an eminent German astronomer and mathematician, 1625-1699.

WEIGEL, V., a German theologian, 1533-1588.

WEILLER, G., a German philosopher, d. 1826.

WEIMAR, ANNE AMELIA, duchess of, daughter of the duke of Brunswick, distinguished by her patronage of literature, died 1807.

WEINBRENNER, FREDERIC, a German architect and friend of Lavater, distinguished as a man of taste and writer on science, 1766-1826.

WEINREICH, V., a German *savant*, 1552-1622.

WEISE, C., a German writer, 1642-1708.

WEISHAUPT, ADAM, a famous name in the history of secret societies, was a professor of canon law in the university of Ingoldstadt. He was born in 1748, and educated among the Jesuits, quarrelling with whom caused him to propose a counter association of the good and enlightened of all nations. The society organized in pursuance of this design, began working in 1776, and was finally known as the Society of *Illuminati*. In its foundation, an endeavour was made to combine all the working advantages and most striking symbols of Freemasonry and Jesuitism; from the latter, its statutes of implicit obedience, and its espionage was derived; from the former its order and ritual, but modified by the revolutionary ends which its leaders really proposed. This society was suppressed by the elector of Bavaria in 1783, and Weishaupt, quitting Ingolstadt, went to Gotha, where he was honoured with the dignity of Aulic counsellor. He died in 1822, and left several works illustrating the history of the Illuminati, and his views concerning the progress of society, and 'Moral Perfectibility.' The Abbé Barruel and Professor Robison wrote exaggerated reports of this and the many similar movements of the period. See further in the article SAINT MARTIN. [E.R.]

WEISS, F. R., a Swiss statesman, 1751-1802.

WEISSE, CHRISTIAN FELIX, a miscellaneous German writer and dramatic poet, author of several successful plays, and of songs and odes which are highly spoken of by the German critics. Weisse likewise acquired great popularity as a writer of works for youth, 1726-1804.

WEITZ, J., a Prussian philologist, 1576-1642.

WELCHMAN, EDWARD, a dignitary of the

church, author of an 'Illustration of the Thirty-Nine Articles,' and a 'Defence of the Church of England,' 1665-1739.

WELD, THOMAS, an English cardinal, whose father, of the same name, was founder of the Roman Catholic college at Stoneyhurst, 1773-1837.

WELDON, JOHN, an organist and distinguished composer of cathedral music, died 1736.

WELLER DE MOLSDORF, JEROME, a German theologian, distinguished for his piety and his connection with Luther, 1499-1572. JAMES, of the same family, an Orientalist and theologian, author of a Greek Grammar, 1602-1664.

WELLESLEY, RICHARD COLLEY WELLESLEY, marquis of, was born at Dublin on 20th June, 1760. He became in youth a very accomplished scholar and gave in early life greater promise of distinction than his renowned brother the duke of Wellington. He was an active member of the Irish House of Lords until the union, and at the same time had a seat in the English Commons. He was brought first into notice by his views on the regency question, which pleased George III. He received a British peerage as Baron Mornington, and the Irish title of marquis of Wellesley. It was in the year 1797 that the career in which he was destined to shine, was opened to him by his appointment as governor-general of India. It seemed at first no favourable prognostic of his career that just after the calamities which had occurred from intrusting a royal duke with the command for which he was unfit, and while a repetition of the same mistake was producing its fruits under the brother of the prime minister, Wellesley passing over veteran officers who had performed great achievements, should intrust high command to his young brother, Arthur. Whether fortuitous or wisely calculated, the result was fortunate for the British rule in India at a very critical time. The government of Wellesley and his brother's victories form the second great epoch after the operations of Clive and Hastings in the acquisition of the British Indian empire. Though he desired to return earlier, he was prevailed on to remain governor-general until the year 1803. He held several offices after his return, and was from 1821 to 1828 governor-general of Ireland. He died on 20th December, 1842. [J.H.B.]

[Dangan Castle, the birth-place of Wellington.]

WELLINGTON. ARTHUR WELLESLEY, afterwards duke of Wellington, was born at Dangan Castle in Ireland, on May 1, 1769.—Marshal Ney, Goethe, and several of the greatest men of the age were born in the same year. His father was Lord Mornington, an Irish nobleman, but he was of Norman blood, being lineally descended from the standard-bearer to Henry II. in his conquest of Ireland in the year 1100. His elder brother, who succeeded to the family honours, was a man of great genius and capacity, who afterwards became governor-general of India, and was created Marquis Wellesley. Thus the same family had the extraordinary fortune of giving birth to the statesman whose counsel and rule preserved and extended our empire in the Eastern, and the hero whose invincible arm saved his country and conquered Napoleon in the Western world. Young Arthur Wellesley, after having received the elements of education at Eton, was sent to the military school of Angers in France to be instructed in the art of war, for which he already evinced a strong predilection. He received his first commission in the army in the 33d regiment, which to this day is distinguished by the honour then conferred upon it. The first occasion on which he was called into active service was in 1793, when his regiment was ordered abroad, and formed part of the British contingent, which marched across from Ostend under Lord Moira, to join the allied army in Flanders. He bore an active part in the campaign which followed, and distinguished himself so much in several actions with the enemy, that though only a captain in rank, he came at length to execute the duties of major, and did good service in several well-fought affairs of the rear guard in which he bore a part. Though the issue of the campaign was unfortunate, and it terminated in the disastrous retreat through Holland in 1794, yet it was of essential service in training Wellesley to the duties to which he was hereafter to be called, for it was with an army at one time numbering 90,000 combatants that he had served; and his first initiation into the duties of his profession was with the great bodies which he was afterwards destined to command, and his first insight into war was on a great scale, to which his subsequent achievements were one day destined to form a bright a contrast. After the return of the troops from Holland, the 33d regiment was not again called into active service till 1799, when it was sent out to India, to reinforce the troops there on the eve of the important war, in which Lord Wellesley, his elder brother, who was now governor-general, was engaged with the forces of Tippoo Saib. Young Wellesley went with them, and on his way out his library consisted of two books, which he studied incessantly, the Bible, and Cæsar's Commentaries. On landing, his regiment, of which he had now become lieut.-colonel, was so conspicuous for its admirable discipline and perfection to which the commissariat and all the arrangements connected with it had been brought that it was specially noticed by General Harris, the commander-in-chief. Previous to the assault of Seringapatam, Tippoo Saib's capital, Wellesley was intrusted with the command of a nocturnal attack on an outwork which proved unsuccessful from the troops missing their way in the dark and getting into a deep water-course which proved to

retreat into Galicia, but not without sustaining losses as great as Sir John Moore had done in the preceding year. He next turned towards Spain, and having effected a junction with the Spanish general, Cuesta, in Estramadura, their united forces, 60,000 strong, but of whom only 20,000 were English and Portuguese, advanced towards Madrid. They were met at Talavera by King Joseph at the head of 45,000 of the best French troops in Spain. A desperate action of two days' duration ensued, which fell almost entirely on the English and Portuguese, as the Spaniards, who were 38,000 in number, fled at the first shot. The French were in the end defeated with the loss of 8,000 men and 17 guns; but the fruits of victory were in a great measure lost to the English by the arrival of Marshals Soult, Ney, and Mortier, with the whole forces in the provinces of Galicia, Leon, and Asturias in their rear, which forced them to retreat to the Portuguese frontier. But one lasting good effect resulted from this movement, that these provinces were liberated from the enemy, who never after regained their footing in them. The year 1810 witnessed the invasion of Portugal by a huge French army, 80,000 strong, under Marshal Massena, which, after capturing the fortresses of Cuidad Rodrigo, and Almeida, penetrated into the very heart of that country. Sir Arthur, who had now been created Viscount WELLINGTON, had only 35,000 men under his command, with which, it was impossible to prevent the fall of those fortresses. But he took so strong a position on the ridge of Busaco that he repulsed, with great slaughter, an attack upon it by two corps of the French army, and when at length obliged to retire, from his flank being turned after the battle was over, he did so to the position of *Torres Vedras*, thirty miles in front of Lisbon, which, by the advantages of nature and the resources of art, had been rendered impregnable. Six hundred guns were mounted on the redoubts, which was defended by 60,000 armed men. After wasting five months in front of this formidable barrier, the French general was forced to retreat, which he did closely followed by Wellington to the Spanish frontier. There Massena turned on his pursuer, and he re-entered Spain with a view to bring away the garrison of Almeida, which was now invested; but he was met and defeated at Fuentes d'Onore by Wellington, and forced to retire without effecting his object to Cuidad Rodrigo. The remainder of the year 1810 and the whole of 1811 passed over without any very important events, although a desperate battle took place in the latter year at Albuera, were Marshal Soult was defeated with the loss of 7,000 men by Marshal Beresford, in an attempt to raise the siege of Badajoz, which Wellington was besieging. He was compelled to desist from that enterprise after he had made great progress in the siege by a general concentration of the whole French forces in the centre and south of Spain, who advanced against him to the number of 60,000 men. But, though Wellington withdrew into Portugal on this occasion, it was only soon to return into Spain. In the depth of winter he secretly prepared a battering train, which he directed against Cuidad Rodrigo, when Marmont's army, charged with its defence, was dispersed in winter quarters, and after a siege of six days, took it by storm in January, 1812. No sooner was this done than he directed his forces against Badajoz, which he also carried by storm, after a dreadful assault, which cost the victors 4,000 men. Directing then his footsteps to the north he defeated Marmont with the loss of 20,000 men in killed, wounded, and prisoners, near Salamanca; and advancing to Madrid, he entered that capital in triumph, and compelled the evacuation of the whole of the south of Spain by the French troops. He then turned again to the north, and advanced to Burgos, the castle of which he attempted to carry, but in vain. He was obliged again to retire, by a general concentration of the whole French troops in Spain, 100,000 strong, against him, and regained the Portuguese frontier after having sustained very heavy losses during his retreat. The next campaign, that of 1813, was a continual triumph. Early in May, Wellington, whose army had now been raised to 70,000 men, of whom 40,000 were native English, moved forward, and driving everything before him, came up with the French army of equal strength, which was concentrated from all parts of Spain in the Plain of VITTORIA. The battle which ensued was decisive of the fate of the peninsula. The French, who were under King Joseph in person, were totally defeated with the loss of 156 pieces of cannon, 415 tumbrils, their whole baggage, and an amount of spoil never before won in modern times by an army. The accumulated plunder of five years in Spain was wrenched from them at one fell swoop. For several miles the soldiers literally marched on dollars and Napoleons which strewed the ground. The French regained their frontier with only one gun, and in the deepest dejection. St. Sebastian was immediately besieged and taken after two bloody assaults, Pampeluna blockaded, and a gallant army, 35,000 strong, which Soult had collected in the south of France to raise the blockade, defeated with the loss of 12,000 men. Wellington next defeated an attempt of the French again to penetrate into France at St. Marcial, and following up his successes, crossed the Bidassoa, stormed the lines they had constructed on the mountains, which were deemed impregnable, and after repeated actions, which were most obstinately contested through the winter, drove them entirely from the neighbourhood of Bayonne, and completed the investment of that fortress, while Soult retired with 40,000 men towards Toulouse. Thither he was followed next spring by Wellington, who again defeated him at Orthes in a pitched battle, after which he detached his left wing, under Lord Dalhousie, which occupied Bourdeaux. The main army, under Wellington in person, followed Soult and brought him to action, in a fortified position of immense strength, on the heights of Toulouse. The battle took place four days after peace had been signed, but when it was unknown to the allies: it graced the close of Wellington's peninsular career by a glorious victory. Honours and emoluments of all kinds were now showered upon the English general. He received a field-marshal's baton from George IV. in return for Marshal Jourdan's taken on the memorable field of Vittoria; he was made a duke on the conclusion of the peace; received the thanks of both Houses of Parliament, and grants at different times to the amount of

£500,000 to purchase an estate and build a palace. He was chiefly at Paris during the year 1814 conducting the negotiations for peace; but on the return of Napoleon from Elba in March, 1815, he was appointed to the command of the united army of British, Hanoverians, and Belgians, 70,000 strong, formed in the Netherlands, to resist the anticipated attack of the French emperor. The French emperor was not long of making the anticipated irruption; on the 15th June, 1815, he crossed the frontier, and drove in the Prussian outposts, with 130,000 men. Next day he attacked the Prussians, under Blucher, with 80,000; and dispatched Ney with 30,000 against Wellington's army, which was only beginning to be concentrated. A desperate action ensued at Quatre Bras, in which the French were at length repulsed with the loss of 5,000 men; and, on the 18th, Wellington having collected all his forces at the post of Waterloo, gave battle to Napoleon in person, who was at the head of 80,000 men. His force was only 67,000, with 156 guns; whereas, the French had 250, and of these troops only 43,000 were English, and Hanoverians, and Brunswickers, who could be relied on, the remainder being Belgians, who ran away the moment the action was seriously engaged. Notwithstanding this great inequality, the British army maintained its ground with invincible firmness till seven o'clock, when the arrival of 50,000 Prussians, under Blucher, on Napoleon's flank, enabled Wellington to take the offensive. The result was the total defeat of the French army, with the loss of 40,000 men and 156 guns. Napoleon fled to Paris, which he soon after left, and surrendered to the English, and Louis XVIII. having returned to his capital: his dynasty, and with it peace, was restored. The allies having determined to occupy the frontier fortresses, with an army of 150,000 men during five years, the command of the whole was bestowed on the duke of Wellington; thus affording the clearest proof that his was the master mind which had come to direct the European alliance. This high and important situation he held for the next three years, during the whole of which time he discharged its arduous duties with the most consummate wisdom, justice, and discretion. Not only did he retain the entire confidence of the allied sovereigns and respect of their soldiers under his command, but he interposed in so efficacious a manner to lighten the enormous burdens laid by the treaty of Paris on France, as to earn the gratitude and receive the thanks of all well-informed persons in that country. Mainly owing to his powerful intercession the period of occupation of the fortresses was shortened from five to three years, and the amount of contributions paid for its support of course proportionally lessened. Wellington resigned his command, and with it his magnificent appointments in October, 1818, and returned to England, to the retirement of a comparatively private station, terminating thus a career of unbroken military glory by the yet purer lustre arising from relieving the difficulties and assuaging the sufferings of his vanquished enemies. In 1819 he was appointed commander-in-chief of the army, which situation he held during the whole anxious years which followed, and by his able and far-seeing arrangements, contributed in an essential manner to bring the nation without effusion of blood through the long years of distress which followed. In November, 1827, he was, upon the dissolution of Lord Goderich's administration, appointed prime minister, which situation he held till displaced by a hostile vote of the House of Commons, on November 30, 1830, when the nation was convulsed by the passion for reform. This terminated his life as a political leader; but he was again appointed commander-in-chief some years afterwards, which situation he held till his death. The vigour of his intellect and sagacity of his counsels appeared in the uniform success which, during that period, attended the military operations in every part of the globe. He suppressed the Canadian revolt in 1837; faced, undismayed, the Affghanistan disaster in 1841; arrayed the forces which again led our standard in triumph to Cabul in 1842; brought the Chinese war to a successful issue; subdued the Sikhs and tribes of Scindia, and rooted out of their almost impregnable fastnesses the formidable Caffres of South Africa. During all this period his counsels, whether at the head of or out of the cabinet, were uniformly directed to one object, the preservation of European peace, which, mainly owing to his exertions, was preserved unbroken, save by domestic tumult, for forty years after his crowning victory at Waterloo. And thus the most successful military commander which Europe has produced, put the key-stone to the arch of his fame, by directing his whole energies, after a brief period of energetic warfare, to the preservation of the blessings and cultivation of the virtues of peace. His long and honoured life, after having been prolonged beyond the usual period of human existence, at length drew to a close. He had, some years before his death, alarming symptoms in his head; so often the consequence of long-continued intellectual effort; but by strict abstemiousness and perfect regularity of life, he succeeded in subduing the dangerous symptoms, and he was enabled to continue and discharge his duties regularly at the Horse Guards till the time of his death, which took place on September 18, 1852, at the advanced age of eighty-three years. He was honoured with a public funeral, and buried in St. Paul's, in the most magnificent manner, beside Nelson. The queen and all the noblest in the land were there; a million of persons witnessed the procession, which went from the Horse Guards, by Apsley House, Piccadilly, and the Strand, to St. Paul's, and not a head was covered, and few eyes dry, when the procession appeared in the streets. Wellington was only once married. He left two sons, the eldest of whom succeeded to his titles and estates, the fruits of his transcendant abilities and great patriotic services. The leading feature of his intellect was wisdom and sagacity; of his moral character, a conscientious discharge of duty. In genius he was inferior to many, in foresight and just discrimination, to none. He was not gifted with the power of oratory, and had considerable difficulty in expressing his opinions; but such was the solidity of his judgment and the strength of his understanding, that what he said never failed to command attention, and, for the last twenty-five years of his life, he exercised an undisputed ascendency in the House of Lords. In private life he was simplicity itself; his habits were regular, his life

abstemious; he was punctual in keeping appointments, and assiduous in the discharge of every duty. Without any habits of ostentation he could, on fitting occasions, exhibit a splendour becoming his rank; and his simple habits enabled him to bestow innumerable sums on deserving objects, and relieve the distresses of great numbers of his brethren in arms. Without asserting that he was free from all the failings common to the children of Adam, it may safely be affirmed that, as he was the greatest general recorded in British, and one of the greatest in European story, so he was one of the most immaculate characters which has adorned the annals of his country. [A.A.]

(Walmer Castle.)

WELLS, Charles William, born of Scotch parents at Charlestown, in South Carolina, and settled as a physician in London, author of several physiological works, and of an Essay on Dew, the theory of which is now admitted, 1753-1817.

WELLS, E., a learned divine, 1664-1727.

WELLWOOD, Sir H. Moncreiff, an eminent divine and pastor of the Scottish Church, 1750-1827.

WELLWOOD, Thomas, a Scottish physician, author of 'Memoirs of English Affairs from 1588 to the Revolution,' 1652-1716.

WELSCH, C. J., a German philologist, 1624-78.

WELSER. See Velser.

WELSTED, Leonard, one of the heroes of Pope's Dunciad, known as a poet and miscellaneous writer, born in Northamptonshire 1689, died 1747.

WENCESLAUS, the name of several dukes and kings of Bohemia:—Wenceslaus I., duke, 907-936. Wenceslaus II., succeeded his uncle, Conrad, 1191, and was driven from the throne three months afterwards by Przemislas, died in prison 1194. Wenceslaus III., as duke, or the *first* as king, son of Przemislas Ottocar I., was born 1205, and associated in the government with his father in 1228. He began to reign alone in 1230, died 1253. Wenceslaus IV. or II., succeeded to the throne of Bohemia 1283, elected king of Poland in opposition to Uladislaus IV. 1300, and king of Hungary 1301. He ceded the latter dignity to his son, and died 1305. Wenceslaus V. or III., son of the preceding, became king of Hungary when twelve years of age 1301, and ceded that country to Otho IV., when his father's death called him to the government of Bohemia in 1305; assassinated 1306. Wenceslaus VI. or IV., king of Bohemia and emperor of Germany, was the son of the emperor Charles IV., and was born 1359. He succeeded to his father in 1378, but his cruelties and debaucheries desolated the kingdom and led, in 1394, to his deposition. This time he succeeded in re-establishing his authority, but in 1400 he was solemnly deprived of the title of emperor, and remained king of Bohemia only, till his death in 1419. It was towards the close of his reign that the wars of John Huss and Zisca broke out.

WENCESLAUS, duke of Saxony, succeeded his brother, Rodolph II., 1370, killed 1388.

WENDELIN, Godfrey, a German astronomer, geometrician, and Latin poet, 1580-1660.

WENGIERSKI, Andrew, the most celebrated of four brothers, rendered famous by their zeal for the spread of Socinianism in Poland, 1600-1649.

WENTWORTH. See Strafford.

WENTZEL, J. C., a Ger. musician, 1659-1723.

WENZEL, C. F., a German chemist, 1740-93.

WEPFER, J. J., a German anatomist, 1620-95.

WEPPEN, J. A., a Ger. dramatist, 1742-1810.

WERDMULLER, John Rodolph, a Swiss landscape and flower painter, 1639-1668.

WERDUM, Ulrich Van, a Dutch statesman and historical writer, died 1681.

WEREMBERT, a monk of St. Gall, distinguished as a Latin poet and musician, died 884.

WERENFELS, S., a German divine, 1651-1740.

WERF. See Vanderwerff.

WERKMEISTER, Andrew, a German composer and writer on music, 1645-1706.

WERNER, Abraham Gottlob, a distinguished mineralogist and geologist, was born at Wehlau in Upper Lusatia, in 1750. He died 1817. His father was connected with an iron foundry, and the young Werner, having minerals given to him as playthings, became familiar with their names from his earliest childhood. He was educated in the school of mines at Freyberg in Saxony, and eventually became professor of mineralogy and inspector of the mineralogical cabinet there. He has conferred great benefit on the science of mineralogy by introducing a precise methodical language, well adapted for the description of minerals, and has rendered much the same service to it as Linnæus did by his Terminology to botany. As a geologist, he is the father of the Neptunian theory, and however liable he is to the charge of very grave errors, he has done vast good to the science by his causing it to be studied more systematically than it ever had been before. Few naturalists who have written as little as Werner have enjoyed a higher reputation. As a mineralogist, the late Dr. Murray of Edinburgh used to prefer him to Haüy. As a geologist, Professor Jameson ranks him as one of the first that has ever appeared. His reputation appears to us at the present day much exaggerated. He lectured with great zeal, assidnity, and success; and though he has left few works behind him, he had the pleasure of seeing a host of ardent pupils rising around him, who by their writings and labours have extended his fame and spread a knowledge of the principles he taught throughout all Europe. A mineral has been named in honour of him, Wernerite. [W.B.]

WERNER, J., a Swiss painter, 1637-1710.

NER, PAUL VON, a Prussian general, dis-
ed at the battles of Prague and Breslau,
85.

NER, ZACHARIAS, the son of a professor
sberg, was born there in 1768. The ill-
l life of this eccentric man of genius falls
stages, surprisingly unlike each other.
rst, extending from his twenty-fifth year
rty-third, he was, in alternate fits, a man
ess, a dramatic poet, and a profligate: he
, and threw up, official appointments under
sian government: he married three times,
three times divorced. In 1811 he became
Catholic, received priest's orders, preached
at applause at Vienna during the Congress
and, in spite of extravagant oddities, was a
rator in the pulpit till his death in 1823.—
mas have a gloomy impressiveness, both of
ion and passion, which (for some of us at
is difficult to resist; but they are full of
nd hideous exaggeration, and of an am-
mysticism with which he invests alike
and history, human conduct and his hobby
asonry. In his works, indeed, as in the
his life, there is much that can hardly be
d with the supposition of sanity. The
pular and least obscure of his works is his
g domestic tragedy, 'The Twenty-fourth
ary.' In others he celebrates Attila,
the Destruction of the Templars, and
version of Pomerania by the Teutonic
[W.S.]

NHER, JOHN BALTHASER, Baron Von, a
jurisconsult and publicist, died 1742. His
M. GODFREY, a jurist, 1716-1794.

NICKE, C., a German poet, died 1720.

NSDORFF, GOTTLOB, and his son of the
ne, distinguished as philologists, the for-
–1729, the latter 1710-1774.

NSDORFF, E. F., a second son of the
, a learned historian of Syria, 1718-1782.

EY, JOHN, great grandfather of the
t leader, was a clergyman of the Church
nd, in the reign of Charles II. He received
ation at New Inn, Oxford, and having
shed himself by his piety, as well as his
—especially his attainments in Oriental
—he secured the favour and patronage of
n, the vice-chancellor of the university.
taken orders, he obtained the living of
d, in Dorsetshire, and was ejected
onformity. Continuing still to preach,
red imprisonment four successive times.
it being broken by the hardships and per-
to which he was subjected, he died at the
e of thirty-four, at the village of Preston;
h was the spirit of the times, that the
ies would not allow his body to be buried
hurch of Preston. John Wesley married
Thomas Fuller, the church historian. [R.J.]

LEY, SAMUEL, father of the celebrated
n of that name, was a minister of the
of England, who held the livings of
and Wroote, in Lincolnshire, in 1700.
devoted and very pious, as well as learned
The country town over which he was
d, was noted for profligacy and vice: and
with which he performed his sacred duties
ffensive to many of the wicked inhabitants,
that they long meditated some plan of revenge. At length they set fire to the rectory. It was with the greatest difficulty the family were rescued, and the first act of the pious father on finding his children assembled in safety on the green before the blazing edifice, was to kneel down in the midst of the crowd, and give thanks to God for the deliverance. Mr. Wesley had some strong peculiarities of opinion; amongst which we may mention as the chief, that he was a most zealous advocate of the revolution. His wife was a violent partizan of the Stuart family: and this opposition of sentiment produced so much domestic discord, that Mr. Wesley left his family and parish for some years, till the reign of Anne brought about a reconciliation. On the accession of the Hanoverian family, the dissensions broke out afresh in the Epworth rectory, as Mrs. Wesley refused to acknowledge their right to the throne. And then there occurred an incident which produced an extraordinary sensation throughout the country in 1716, under the name of the Epworth ghost. It consisted of some strangely mysterious noises that were made when the family were at prayers, and especially when they came to the supplications for King George and the prince. It is now generally believed to have been a Jacobite trick, which the servants or neighbours resorted to, in order to frighten old Wesley from his political allegiance. Mr. Wesley was the author of several works both in prose and poetry. The principal of these were, a 'Life of Christ' in verse, 'The Histories of the Old and New Testaments' in verse, 'Elegies on Queen Mary and Archbishop Tillotson,' and 'Dissertations on the Book of Job.' He died April, 1734. [R.J.]

WESLEY, SAMUEL, son of the former, was born at Epworth, 1692. Although he was four years old before he could speak, he displayed great quickness and aptitude for learning,—distinguishing himself to a very uncommon degree by his classical attainments, first at Westminster, and afterwards at Christ Church, Oxford. From Christ Church he returned to Westminster, in the capacity of usher; and there took orders under the patronage of Bishop Atterbury. Having strongly imbibed his mother's political opinions, he assailed the administration of Sir Robert Walpole, with satirical abuse; and rendered himself so obnoxious to the ministry, that when the office of under-master became vacant, and he was proposed as in all respects well qualified to fill it, the appointment was refused. Finding promotion at Westminster hopeless, he accepted the mastership of Tiverton school. Samuel was a religious man, but of sound and sober judgment. He disapproved of much both in the sentiments and conduct of his brothers, and for many years they never met. He died in 1739, in firm and unalterable communion with the Church of England. [R.J.]

WESLEY, JOHN, the great founder of the Arminian branch of methodists, was born at Epworth, Lincolnshire, on 17th June, 1703. His father, the rector of that place, was a man whose great piety and zealous administration of discipline excited against him the hostile feelings of his parishioners. Their malignity drove them to the wicked purpose of setting fire to the rectory at midnight, and little Johnny Wesley, then a very young boy, was literally plucked as a brand from the

burning. The domestic education he received was strictly of a religious character, and under the instructive influence of his mother especially, his heart was early imbued not only with the knowledge, but the fear of the Lord. Having received the elements of classical education at Charter House school, he was entered at the age of seventeen a student of Christ's Church, Oxford. While at that seat of learning, he became member of a private society consisting of a few young men of congenial piety, whose number amounted to fifteen, and who attracted great notice by the austerity of their manners and the fervour of their piety. Their meetings for social prayer and religious converse were held in Wesley's chambers—they formed the purpose of partaking of the communion together once, as well as fasting twice a-week. From these objects of personal improvement, they ere long directed their views towards the religious enlightenment of the poor; and for that purpose they divided the town into districts, each of the members charging himself with the voluntary duty of paying domiciliary visits and maintaining a religious superintendence of the sick and destitute inhabitants. The novelty of such proceedings exposed the young students to much satirical abuse, but they persevered through good report and bad report, while the ardour they displayed in the prosecution of their studies, together with the honours that most of them gained, disarmed the college authorities of all grounds to complain that they were spending their time in pursuits not strictly academic. On Wesley's completion of his university studies, steps were in the course of being taken by his friends to procure his appointment to be assistant and successor to his aged father in the parish of Epworth. But for conscientious reasons, he declined the offer, and determined to remain at Oxford to diffuse his religious principles amongst the students. In 1735, being in London for the settlement of some family matters, he received from the trustees of the new colony at Georgia an invitation to go out to that settlement as missionary. Having consulted their mother, who advised their acceptance of the offer, John and Charles Wesley embarked for the Georgian settlement on 14th October, 1735. Several of their Oxford associates accompanied them as labourers in the missionary field, and in consequence, being too numerous for that place, Charles with one friend repaired to Frederica, while John settled at Savannah. There he soon gathered a large congregation, which continued to flourish for some years, till his vigorous and precipitate measures of discipline raised such a storm of indignation amongst the people, that he was forced to resign. Returning to England, he settled in London, where he became acquainted with the famous Peter Bœhler, to whom Wesley himself ascribes the honour of being the agent in his conversion to vital Christianity. The date of this marked change in his religious character and views he fixes on 24th May, 1738. Whitfield having about this time returned to England, Wesley joined his standard, and both commenced an active career of field-preaching at Bristol, where also the first methodist chapel was erected, in 1739. Wesley afterwards returned to London, where he performed regular public worship in a large building in Moorfields, and that place, from its having be originally a foundry, was afterwards well kno as the Foundry Church. Wesley's connection wi Whitfield was broken by the irreconcileable diffe ence of their views on fundamental articles faith, he espousing Arminianism, while Whitfie was steadfast in his adherence to the Calvinis system. The rupture between these two gre leaders gave a shock to methodism, the effec of which remain to this day. But Wesley was undaunted as he was indefatigable. He perau bulated the country, forming new congregations many parts; and being now untrammelled by th fetters of old or traditionary usage, he employe the services of lay preachers. The leading feature of the ecclesiastical system he laboured to establis may be thus briefly described. The preachers were to itinerate, to depend on the gratuitous hospitality of friends to the cause, instead of being provided for by a fixed stipend—congregations were to be divided into classes—a vigilant inspection established over the morals of all—weekly meetings were to be held at which the members of any class might have an opportunity of expressing their wants or describing their religious state and feelings. He and his preachers, at the commence ment of their itinerant labours, were exposed maltreatment in a variety of ways, but they bo all annoyances, whether in the form of bodily injury or obloquy, with such fortitude and patie as ere long disarmed the violence of their op nents. Wesley was a man of eminent piety devoted zeal, and yet in his character sev blemishes appeared, the principal of which ambition and vanity. He married late in and from the violence and caprice of the L temper, he seems to have made a wrong cho for it proved an unhappy union. Wesley preaching at Lambeth caught cold, which l him into a fever, and his weakened constitu being unable to resist its ravages, he fell a vi to this malady on the 2d of March, 1791, in eighty-eighth year of his age, and sixty-fift his ministry.

WESLEY, CHARLES, third son of Samuel brother of John Wesley, was born at Ep April, 1708. While at Westminster schoo Irish gentleman of great fortune, of the nam Charles Wesley, though unknown to the fa wrote, proposing to make him his heir; and ac ingly, for several years the expenses of his cation were borne by his unseen namesake course of time, a gentleman, supposed to be Irish patron, waited upon Charles, and urge youth to accompany him, and take up his res in Ireland. The family having left the young to act according to his own discretion, Ch intimated his resolution to remain in Englan consequence of which, the inheritance destine him was given to another, who taking the nam Wesley, or Wellesley, was the first earl of Morn ton, and grandfather of the duke of Wellin 'Had Charles made a different choice,' Southey, 'there might have been no metho —the British empire in India might still been menaced from Seringapatam, and the u puted tyrant of Europe might have contin insult and endanger our shores.' Charles with his brother John to Oxford, took an

; in the meetings of their religious association
hat university, and accompanied him on the
sionary expedition to the Georgian settlement.
the Savannah, however, the brothers took
rent courses. Charles parted with his brother
e, and in company with Ingham, one of his
ord comrades, repaired to Frederica. The
l discipline, however, he established at that
lement, disgusted the people; and although he
ured incessantly for their spiritual welfare, yet
ng pursued measures for which the people
d only have been gradually reconciled, espe-
y concerning the observance of Sabbath, and
rule of admission into communion with the
rch, he was at length obliged to leave. Charles
rned to England, and having become acquaint-
with Peter Bœhler, the Moravian, an entire
ge was produced on his religious views and
ngs. He dated his *conversion* on 24th May,
8: and that has ever been considered a remark-
day in the history of methodism. Having
blished himself in London, he preached for a
le to large congregations in Blackheath: but
rders and confusion occurred there as formerly
Georgia, and Charles now commenced a course of
erant preaching. While itinerating in York-
e, he was taken up, on suspicion of being a
bite, but having satisfactorily proved that he
merely used some scriptural expressions in a
tual sense, without the remotest reference to
Pretender, he was acquitted. But this accus-
tended to increase the obloquy under which
thodist leaders lay; and on several occasions,
es and his friends were exposed to great
e and danger. The history and public
s of Charles Wesley have been anticipated in
evious notice of his brother John. He
d in the forty-first year of his age, Miss
Gwynne; and after this event, he gradually
inued his itinerating, to perform the duties,
oy the comforts of domestic life. Latterly,
ions differed considerably from those of his
especially regarding the evil tendency of
-meetings, and other parts of the metho-
cipline. Charles had a warm, poetical
d wrote some beautiful hymns. He died
[R.J.]

EL, JOHN, in Latin *Wesselus*, professor
ophy and theology at Cologne, celebrated
ersary of the Realists, and the forerunner
, born at Groningen 1419, died 1498.

LEY, HARTWIG, a Jew of Copenhagen,
r his Hebrew poetry, moral treatises, and
ries on the Bible, 1723-1805.

LING, PETER, a distinguished German
d philologist, 1692-1764.

BENJAMIN, P.R.A., was born at Spring-
nnsylvania, October 10, 1738. He
his career as a portrait painter at
, he then removed to New York, and

oduced to George III. by Dr. Drum-
hbishop of York, and he was almost
he king from the year 1767 until
e lost the patronage of the court
ness of the king. He then commenced his series of great religious pictures, to which he now chiefly owes his reputation. Of his earlier works, the 'Death of General Wolfe' is the most celebrated; in this picture he introduced the sensible innovation of dressing men in their own clothes; painters had previously as a rule, very absurdly used the Roman costume on all historic occasions, a custom not a whit less foolish than dressing the Greeks and Romans in the costume of modern times; the latter absurdity may indeed, at least, rest on the plea of ignorance of the real costume. To account for such a fact at present, as that Sir Joshua Reynolds should have endeavoured to persuade West to dress Wolfe in the uniform of a Roman general of 2000 years back, defies reason. West deserves the profoundest gratitude of posterity, if it be just to identify such a revolution from the absurd to the rational with his individual efforts. He succeeded Reynolds as president of the Royal Academy in 1792; he died March 11, 1820, in his eighty-second year, and was buried in St. Paul's. —(Galt, *Life and Studies of Benjamin West.* London, 1820.) [R.N.W.]

WEST, GILBERT, a nephew of Lord Cobham, distinguished as a poet and miscellaneous writer, was born in 1706, and in 1752 appointed clerk of the privy council, after which he became treasurer of Chelsea Hospital. His principal works are his original Poems, a version of Pindar, and Observations on the Resurrection. He was on intimate terms with Dr. Doddridge. Died 1756.

WEST, JAMES, a connoisseur in antiquities, whose collection of MSS. is now in the British Museum, president of the Royal Society from 1768 to his death in 1772.

WEST, R., a learned lawyer, died 1726.

WEST, THOMAS, a Jesuit of Lancashire, author of a 'History of Furness Abbey,' 1716-1779.

WESTALL, RICHARD, a famous water-colour painter and designer, was born in 1765, and apprenticed in London to an engraver of heraldry. He commenced his career as an artist in 1786, being then on intimate terms with Lawrence; and at the close of his life gave lessons to her present majesty, then Princess Victoria. His celebrity rests on his beautiful illustrations of Milton, Shakspeare, and Moore's Loves of the Angels. Died 1836. WILLIAM, his younger brother, also an artist, is distinguished by his numerous illustrations of the picturesque, supplied to the booksellers, and collected in his own tours, 1782-1850.

WESTERBAAN, JACOB, a Dutch priest, translator of the Psalms, and author of Poems, 17th c.

WESTERMANN, F. J., a French officer, distinguished in the army of Dumouriez and afterwards in La Vendée; executed with the Dantonists 1794.

WESTON, ELIZABETH JANE, an English lady settled at Prague in Bohemia, and ranked with the poets and Latin scholars of the 16th century.

WESTON, STEPHEN, an Oriental scholar, who became rector of Manhead, in Devonshire, but resigned his living to devote himself to literary pursuits, author of Translations from the Chinese and Persian, a Chinese Dictionary, and several other works in philology, 1747-1830.

WESTON, T., a comic actor, died 1776.

WESTON, W., a learned divine, died 1760.

WESTPHAL, E. C., a German jurist, 1737-92.

WESTPHAL, J., a Germ. theologian, 1510-71.

WETHERELL, Sir Charles, an eminent lawyer, who became attorney-general under the administration of the duke of Wellington, was born in 1770. At the period of the Reform Bill, he held the office of recorder at Bristol; and his opposition to that measure nearly cost him his life in the riots of 1831. His death, in 1846, was occasioned by concussion of the brain, produced by falling from his carriage.

WETSTEIN, John Rodolph, a Swiss magistrate, statesman, and writer on diplomacy, 1594-1666. The *second* of the name, son of the preceding, a theologian and classical scholar, 1614-1684. The *third*, son of the latter, a theologian and Greek scholar, 1647-1711. John Henry, a second son, a printer of classical editions, established at Amsterdam, 1649-1726. C. Anthony, son of John Henry, a Dutch scholar and poet, 1743-1797. John James Wetstein, a theologian and philologist, well known for his labours on the New Testament, was also a member of this family. His 'Prolegomena' to a new edition of the Greek Testament was published in 1730, and in 1751 the text itself was given to the world with every variation that he had discovered, and his critical remarks. Died in the sixty-first year of his age, 1754.

WETZEL, J. C. F., a Ger. Hellenist, 1762-1810.

WETZEL, J. G., a German writer, 1691-1755.

WEWITZER, R., a comic actor, 1748-1824.

WEYSE, Christopher Ernest Frederic, a famous musical composer, was born at Altona, in 1774, and died in 1842. He excelled chiefly in oratorios and sacred music; but he composed a vast number of songs, which became highly popular among the Swedish peasantry.

WEZEL, J. C., a German novelist, 1747-1800.

WHALLEY, Peter, an English critic and divine, author of 'An Essay on the Method of Writing History,' 'An Inquiry into the Learning of Shakspeare,' an edition of Ben Jonson, and a 'Vindication of the Evidences and Authenticity of the Gospel from the Objections of Lord Bolingbroke,' 1722-1791.

WHARTON, G., an Eng. astronomer, 1617-81.

WHARTON, Henry, a learned divine, to whom we are indebted for valuable illustrations of our ecclesiastical history, 1664-1695.

WHARTON, Thomas, an eminent physician and professional writer, b. in Yorkshire, 1610-73.

WHARTON, Thomas, marquis of, eldest son of Philip, Lord Wharton, distinguished as a strenuous opponent of the court in the reigns of Charles II. and James II., and as a Whig statesman under the administration of Lord Godolphin; born about 1640, d. 1715. The revolutionary ballad of 'Lillibullero,' is attributed to him. His son, Philip, duke of Wharton, was an unprincipled politician, and turned about without scruple from the cause of the pretender to that of George I. He was a brave soldier, however, and wrote some poems and miscellaneous pieces which have been published. Died 1731.

WHATELY, W., a puritan divine, 1583-1639.

WHEARE, D., a Cornish historian, 1573-1647.

WHEATLEY, Charles, a vicar of Herefordshire, au. of 'A Rational Illustration of the Book of Common Prayer,' and other works, 1686-1742.

WHEATLEY, Francis, a self-instructed portrait painter, who excelled also in the delineation of domestic scenes, 1747-1801.

WHELER, or WHEELER, Sir George, a scholar and divine of the Church of England, who was born at Breda in Holland, where his parents were living in exile, 1650. After travelling in Greece and Asia Minor he entered the church, and obtained some rich preferments; the chapel known by his name in Spitalfields was built at his expense on the estate belonging to him. His works consist of his 'Travels,' a highly valued production, 'The Protestant Monastery,' containing directions for the religious conduct of a family, and 'An Account of the Churches and Places of Assembly of the Primitive Christians.' Died 1724.

WHETHAMSHEDE, John, an abbot and chronicler of St. Albans, who lived to be more than a hundred years old; ordained 1382, died 1464.

WHICHCOTE, Benjamin, a philosophical divine of great influence in his day, was born in Shropshire, 1610, and died at the house of his friend, Dr. Cadworth, in 1683. He belonged to what is called the Latitudinarian party. Besides his Sermons, we possess his 'Observations and Apothegms,' published by one of his pupils in 1688, and 'Moral and Religious Aphorisms,' which appeared for the first time in 1703. His Sermons were first given to the world by the earl of Shaftesbury.

WHISTON, William, well known as a divine and natural philosopher, was born at Norton in Leicestershire, where his father was rector, in 1667. Having taken orders he became chaplain to the bishop of Norwich, and in 1696 published his first work, entitled 'A New Theory of the Earth, from its Original till the Consummation of All Things.' In 1698 he became rector of Lowestoft in Suffolk, and in 1703 succeeded Sir Isaac Newton as professor of mathematics, but seven years later, was expelled the university on a charge of Arianism. He published several other works, and among others a translation of Josephus, and his own Memoirs. Died 1752.

WHITAKER, Edward, a clergyman [illegible] schoolmaster of the Church of England, author of 'A General and Connected View of the Prophecies,' 'Family Sermons,' &c., born 1750.

WHITAKER, John, a clergyman of Cor[illegible] well known for his learned writings on antiq[illegible] and historical subjects; born at Manchester [illegible] 1735, died 1808. Among his works are a [illegible] tory of Manchester,' 'Genuine History [illegible] Britons Asserted,' 'The Origin of Arianism [illegible] Real Origin of Government,' 'Mary Queen [illegible] Vindicated,' 'Course of Hannibal over the [illegible] 'The Life of St. Neot,' 'Histories of Lan[illegible] Oxford,' besides Sermons, Poems, and vari[illegible] tical papers.

WHITAKER, Thomas Dunham, re[illegible] Whalley and Blackburn, author of se[illegible] quarian works, and an edition of the Vi[illegible] Piers Ploughman, 1759-1821.

WHITAKER, William, a Calvinistic d[illegible] great eminence, born at Burnley, in La[illegible] 1547. He was an active party to the re[illegible] disputes of his age, and was called by Ca[illegible] Bellarmine, the most learned heretic he ha[illegible] read. Died 1595.

WHITBREAD, Samuel, son of the [illegible]

brewer of that name, distinguished as a politician, was born in 1758, and was married in 1789 to Elizabeth, eldest daughter of the first Earl Grey. His career in parliament dates from 1790 to his death in 1815, and was marked by his impeachment of Lord Melville. He was a zealous Whig. He died in the year mentioned by his own hand.

WHITBY, DANIEL, a learned controversial divine, whose commentary on the New Testament is still held in high estimation, 1638-1726.

WHITE, JOSEPH BLANCO, a Spanish gentleman of Irish descent, who became convinced of the errors of popery at the age of fifteen, while being educated as a Roman Catholic priest. He came to England in 1810, and devoted himself to literature, chiefly through the magazines and periodical press, 1775-1841.

WHITE, REV. GILBERT, a good naturalist and pleasing writer, was born at Selborne in Hampshire, in 1720. He died in 1793. He was educated at Oxford; and was elected a fellow of Oriel College; took his degree of M.A., and was appointed one of the senior proctors of the university. He soon left Oxford, and possessing a quiet, unambitious disposition, a great love for the study of nature, and a particular attachment to the charms of rural scenery, he fixed his residence in his native village of Selborne. Nor could any offers which were made to him of settling upon a college living, tempt him from his beloved retreat, but here, in the enjoyment of competence and learned ease, he spent his days in serene tranquillity, beloved by his neighbours and in correspondence with many of the most learned antiquarians and naturalists of the day. In 1789 he published his Natural History of Selborne. The minute exactness of the facts contained in it, the good taste displayed in their selection, and the elegance and the freliness with which they are described, render is work exceedingly interesting and instructive, d make it one of the most generally popular ks on natural history ever written. It has gone ugh various editions, and still holds its popu- y with all who can relish accurate descriptions e habits of domestic animals, birds, and insects, hich they are surrounded. [W.B.]

HITE, HENRY, a clergyman and literary cter of Lichfield, died 1836.

HITE, HENRY KIRKE, one of those many that have been extinguished prematurely, is interesting on account of his early struggles ie amiability and piety of his character. If survived long enough for active usefulness, ht have been an invaluable clergyman; but ifficult to believe that he would ever have distinguished poet. He was born in 1785, tingham, where his father was a butcher. al for study in boyhood was not damped, by a succession of manual employments, or drudgery of an attorney's desk, at which he and by placed. Contributions to small cals encouraged him to print, in 1803, a of poems, which was severely reviewed, de him favourably known to Southey and nen of eminence. His religious opinions lings had now taken a very serious turn; . Simeon, with the aid of his friends, pro- or him a sizarship in St. John's College, dge. In both of his two years at the university, he distinguished himself eminently; but the severity of the labour wore him out. He died in 1806, in his twenty-first year. Southey edited his 'Remains,' prefixing a very beautiful memoir. [W.S.]

WHITE, JAMES, a miscellaneous writer and novelist, born in Ireland, died 1799.

WHITE, JEREMY, a nonconformist minister, and wr. in favour of universal restitution, d. 1707.

WHITE, JOHN, a barrister and political writer of the commonwealth period, commonly called *Century White*, from his principal publication; this work bears the following expressive title,—'The First Century of Scandalous Malignant Priests, Made and Admitted into Benefices by the Prelates; or, a Narrative of the Causes for which the Parliament hath Ordered the Sequestration of the Benefices of Several Ministers Complained of before them, for Viciousness of Life, Errors in Doctrine, for Practising and Pressing Superstitious Innovations against Law, and for Malignancy against the Parliament.' Born in Pembrokeshire 1590, died 1645.

WHITE, JOHN, usually called '*The Patriarch of Dorchester*,' was a puritan divine, highly esteemed for his eloquence and piety, 1574-1648.

WHITE, or WHYTE, JOHN, a catholic divine, created bishop of Winchester by Mary, 1511-1560.

WHITE, JOSEPH, a divine of the Church of England, in high repute as an Oriental scholar, was born at Stroud, in Gloucestershire, 1746, and died 1814. He obtained great credit and preferment for his Bampton lectures, which, it was afterwards discovered, had been composed principally by Mr. Badcock, once a dissenting minister, further aided by contributions in Greek literature from Dr. Parr. His other works are 'Observations on Certain Antiquities of Egypt,' a 'Harmony of the Gospels,' &c.

WHITE, or VITUS, RICHARD, a Roman Catholic professor and canonist, author of a Latin History of the British Islands, died 1612.

WHITE, ROBERT, an engraver, 1645-1704.

WHITE, THOMAS, an English Aristotelian philosopher and catholic, known as a friendly disputant with Hobbes and Descartes, died 1696.

WHITE, THOMAS, the founder of Zion College in London Wall, and other charities designed to promote learning, was a native of Bristol. He commenced his public career as vicar of St. Dunstan's, Fleet-Street, in 1575, and died 1624. The college and alms-house were built on the site of Elsynge priory, then in ruins, £3,000 being left by him for that purpose.

WHITE, SIR THOMAS, founder of St. John's College, Oxford, was a rich citizen and mayor of London. He was born at Reding in 1492. His mayoralty dates in the year of Wyatt's rebellion, and for his services at that crisis he received the honour of knighthood. Died 1566.

WHITFIELD, GEORGE, founder of the Calvinistic methodists, was a native of Gloucester, in the Bell Inn of which town, his father being a tavern-keeper, he was born 16th December, 1714. His father having died while George was yet young, the boy's education devolved solely on his mother, whose pious instructions and example had a powerful influence in imbuing his infant mind with strong religious impressions. Having resolved to cultivate the superior talents with which she saw

George was endowed, she sent him to a classical school. At the age of fifteen he had distinguished himself by the accuracy, extent of his knowledge, and taste in Greek and Roman literature. But his mother not succeeding in the hotel, and becoming reduced to poverty, the progress of George's education was stopped, and being driven to undertake some menial place about the establishment, his manners and morals were much injured by his association with irreligious servants. Happily his impressions revived, and having been confirmed he received for the first time the sacrament of the Lord's Supper. His mother's circumstances improving, she sent him to Pembroke College, Oxford, and there he joined in forming a small select society for mutual improvement in religious knowledge and personal piety along with the Wesleys and a few college contemporaries of kindred spirit. Dr. Benson, bishop of Gloucester, who was acquainted with his rare talents and piety, resolved to grant him ordination, and the solemn ceremony was performed at Gloucester, on 20th June, 1736. His first sermon, preached on the following Sabbath, produced an extraordinary sensation. From Gloucester he went to London, where he preached alternately in the chapel of the Tower and at Ludgate prison every Tuesday. In 1737 he joined his friends the Wesleys as a missionary at the Georgian settlement. But he had only been four months resident there, when he returned to England both to obtain priest's orders and to raise subscriptions for erecting an orphan house in that settlement. On his arrival in London, he found an outcry raised against him on account of methodism. Bishop Benson disregarded it, and ordained him a priest. But he was denied access to the pulpits of many old friends; and hence he commenced the practice of open-air preaching in Moorfields, Kennington, and Blackheath, and other quarters, where his ministrations were attended by vast crowds. Having raised a fund of £1,000 for his orphanage, Whitfield returned in 1739 to the American continent. At Savannah immense crowds repaired to hear him, and extraordinary scenes of excitement were enacted. On 25th March, 1740, he laid the first brick of the orphan asylum, and when the building was completed, he gave it the name of Bethesda. Although his ministry was very successful at Savannah, he sighed for his native land; and accordingly in 1741, he returned once more to Britain, where he continued with indefatigable diligence to preach the gospel. In prosecution of that object, he made a tour through England, Wales, and Scotland, preaching in many places, and always in the open air, to immense crowds. While in Wales, he married Mrs. Jones, a widow to whom he had long cherished a warm attachment; and shortly after his marriage, he repaired to London, where, it being winter, some of his admirers erected a wooden shed in which he preached. To this fragile structure, he gave the name of the tabernacle, and it was the scene of some extraordinary awakenings. The journeys and voyages of this indefatigable minister amount to a number almost incredible. He has stated in his memorandum book, that 'from the time of his ordination to a period embracing thirty-four years, he preached upwards of 18,000 sermons, crossed the Atlantic seven times, travelled thousands of miles both in Britain and America;' and when his strength was failing, he put himself on what he termed 'short allowance,' viz., preaching only once in every day of the week, and three times on the Sabbath! Whitfield was no common preacher. Parties of the most opposite character and principles, such as Franklin, Hume, and John Newton, have united in bearing testimony to the beauty and effectiveness of Whitfield's pulpit oratory. The death (in 1770), of this eminent servant of God was sudden, having been produced by a cold caught while preaching at Portsmouth, and followed by a severe attack of asthma, which put a period to the life and labours of one of the most devoted and successful ministers of Christ since the days of the apostles. [R.J.]

WHITEHEAD, D., an eminent divine, d. 1571.

WHITEHEAD, G., a cel. Quaker, 1636-1725.

WHITEHEAD, JOHN, a methodist physician, who attended Wesley in his last illness, preached his funeral sermon, and wrote 'Memoirs' of his life, died 1804.

WHITEHEAD, P., a satiric poet, 1709-1774.

WHITEHEAD, WILLIAM, successor of Cibber as poet-laureate, author of 'The Roman Father,' 'The School for Lovers,' 'Friendship,' and other compositions of considerable merit; he was a friend of Mason, who wrote his life, 1715-1785.

WHITEHURST, JOHN, a philosophical writer and maker of instruments, 1713-1788.

WHITELOCK, BULSTRODE, an eminent lawyer and friend of Cromwell, was the son of Sir James Whitelock, lord chief justice of the King's Bench, and was born in London in 1605. He was one of the managers of the trial of Strafford, but took no part in that of Laud or the king. In 1656, he was chosen speaker of the House of Commons, and in 1659 became president of the council of state, and keeper of the great seal. His historical memoirs are highly valued, and Whitelock is greatly eulogized, as to personal character, by Lord Clarendon. He died after many years' retirement at Chilton Park, in Wiltshire, 1676.

WHITGIFT, JOHN, archbishop of Canterbury, distinguished as a supporter of the Church of England, was born at Grimsby in Lincolnshire 1583, or, according to some authorities, in 1533. He was regarded as a great persecutor both of the puritans and papists, by their own partizans, but Hooker and the episcopalians extol his moderation and proper firmness. He died in 1603, almost his last words being 'Pro Ecclesia Dei.'

WHITLOCK, ELIZ., a famous actress, sister of Mrs. Siddons and the Kembles, 1761-1836.

WHITTINGHAM, SIR SAMUEL FORD, a Brit[illegible] tish officer, distinguished in the service of [illegible] during the peninsular war, died commander-in-chief at Madras 1841.

WHITTINGHAM, WILLIAM, a puritan [illegible] who became dean of Durham in the reign of [illegible] beth. He destroyed or mutilated many [illegible] antiquities of the cathedral in his zeal [illegible] popery, 1524-1589.

WHITTINGTON, SIR RICHARD, whose [illegible] has been rendered popular by the legends [illegible] about him, the real truth concerning which [illegible] never been ascertained, was a citizen and [illegible] of London. He probably rose from a humble

tion, like so many others who have filled the magisterial chair. His last mayoralty dates 1419.

WHITTINGTON, ROBERT, author of grammatical works, long used in the English schools, flourished about 1480-1530.

WHITWORTH, CHARLES, Baron, an ambassador from the English court to Peter the Great, author of an Account of Russia, 1670-1725.

WHYTT, R., a Scotch physician, 1714-1766.

WICHERLY. See WYCHERLEY.

WICKHAM. See WYKEHAM.

WICKCLIFF. See WYCLIFFE.

WICQUEFORT, ABRAHAM DE, a Dutch diplomatist, author of Memoirs concerning ambassadors and their functions, 1598-1682.

WIEGLER, J. C., a Germ. chemist, 1732-1800.

WIELAND, CHRISTOPHER MARTIN, a celebrated German poet, dramatist, and novelist, of the last century. He has been called the German Voltaire. His works have been published in 51 volumes, and embrace essays, tales, poems, histories, and translations. 'Oberon,' a poetic romance in 12 cantos, is his best known production; 1733-1813.

WIELING, A., a German jurist, 1693-1746.

WIER, JOHN, in Latin *Wierus*, or *Piscinarius*, a Brabantine physician and writer on demonology and witchcraft, 1515-1588.

WIFFEN, JEREMIAH HOLME, a Quaker poet, author of a translation of Tasso, and other popular productions in miscellaneous literature, including a History of the Russells, 1792-1836.

WIGAND, JOHN, a learned divine, 1523-1587.

WILBERFORCE, WILLIAM, Esq., a distinguished British statesman and Christian philanthropist, was born in 1759, at Hull. Educated at the grammar school of his native town, he was transferred in due time to Cambridge, where his distinguished position as a scholar and a gentleman is sufficiently indicated by the fact of his being chosen whenever he attained majority, to represent Hull in parliament. For a considerable time he was content to remain a silent member of the House of Commons, while at the same time he was a most active and intelligent observer of the forms of that legislative assembly. Reserving himself for some great and important occasion, he made his *début* as a parliamentary orator on the subject of the slave trade, and in his second session, he introduced a bill for the abolition of the inhuman traffic. The 12th of May, 1789, was the memorable day when that topic was first introduced; and the journals of that period are unanimous in ascribing much of the interest connected with the movement to the powerful and affecting speech with which the bill was prefaced. Mr. Wilberforce was acknowledged both in and out of the house to have earned by that appearance, the reputation of one of the most eloquent persons of the age; and the hearts of all good men in every part of the country implored blessings on the head of him who dared in the highest places in the land to advocate the cause of outraged humanity. A most violent and determined opposition was organized by interested parties. Nevertheless in the following year Mr. Wilberforce renewed his motion, and on the plea of insufficient evidence, the opposing party succeeded in procuring a postponement of the question. Many men would have been dispirited by these fruitless efforts, and perhaps have relinquished their task in despair. But Mr. Wilberforce was not to be daunted. Having taken up his position on the ground of conscientious objection to all trafficking in slaves, he prosecuted the measure with that calm and unyielding determination which is always the fruit of mature thought and strong principle; and his patience was put to a severe trial; for while he renewed his motion every session from 1792, he met with no better success than at first. In 1804, after a cessation for a few years, he brought the subject once more before the notice of a new parliament. But the public mind had made a prodigious advancement towards a better tone of feeling in regard to the slave trade, and the bill passed the third reading in the Lower House. In the Upper House, the consideration of the subject was postponed till the next session. A still more important step in advance was taken when the liberal cabinet in 1806 adopted the bill and threw all the weight of government influence into the scale. It was introduced into the Commons' House at the special request of Wilberforce under the auspices of Fox, and was passed by a majority of 114 to 15, and Lord Granville succeeded in carrying it through the Lords. But Mr. Wilberforce was universally regarded throughout the kingdom as the great champion of the cause—and the most gratifying expressions of public gratitude were poured in upon him from all parts of the country. Mr. Wilberforce has established claims to public notice and esteem of another and even higher kind. He had become a decided Christian, at a time and in circumstances when to make an avowal of evangelical sentiments and to act in accordance with the high principles of Christian morality was a much more difficult thing than it is happily in the present day. The publication of his 'Practical View of Christianity,' a work in which he compared the defective notions of religion that prevailed among the majority of professing Christians with the standard of the New Testament—formed an era in the religious history of this country; and multitudes have traced to its perusal their first serious impressions of religion. The character of the distinguished author was a beautiful commentary on the principles developed in this book. Throughout a long life he sustained the character of a consistent Christian; and that was no easy attainment for one who moved in the highest circles, and was constantly mingled in all the changes of the political world. But although his position was isolated, such was the sincere and unaffected piety—such the prudent discretion that regulated his intercourse with general society, that he commanded the respect and esteem of all parties. Mr. Wilberforce terminated his honourable and useful life on 28th July, 1833, and on his deathbed enjoyed the comforts of that gospel in which he had reposed his faith for so many years of his life. [R.J.]

WILBYE, J., a musical composer, 16th century.

WILCOCKS, JOSEPH, bishop of Rochester, promoted the erection of the west front of Westminster Abbey, 1673-1756. His son, JOSEPH, an ingenious antiquarian, author of 'Roman Conversations,' and 'Sacred Exercises,' 1723-1791.

WILD, HENRY, an Oriental scholar, born at Norwich, where he began life as a tailor about

1684. The date of his death is unknown, but in 1734 he published a translation of Mohammed's Journey to Heaven. He was a man of irreproachable morals, and seems to have suffered much from his precarious means of subsistence.

WILD, R., a divine and poet, 1609-1679.

WILDBORE, CHARLES, a self-taught mathematician and miscellaneous writer, died 1802.

WILDENS, J., a Flemish painter, 1584-1644.

WILFORD, FRANCIS, a German Orientalist, and officer in the British service, died 1822.

WILFRED, a Saxon bishop and saint of the Roman calendar, who exhibited his architectural skill and his taste in embellishments, by the improvement of York cathedral and the erection of churches at Hexham and Ripon; died 709.

WILHEM, W. L. B., founder of the popular singing schools in France, 1779-1842.

WILKES, JOHN, was born in London on the 17th of October, 1727. His father, an affluent distiller, gave him a high education, of which his capacity enabled him to take full advantage. He was learned and witty, and his attractive conversation, aided by his fashionable tastes and lavish habits made him popular with the juvenile aristocracy of the day, both good and bad. His forbidding appearance has often been alluded to, but authentic original portraits, while they have a general resemblance to the expression in Hogarth's caricature, represent not a coarse rude demagogue, but the delicate sinister features of a sybarite and heartless profligate. He treated the mob for his own purposes much as his profligate companions of the Monk-monks' Club, who were so indignant at his becoming a demagogue, treated their female victims. It was in 1762 that, driven desperate by his extravagance, he commenced the *North Briton*. For a libel there printed, his house was searched under a general or indefinite warrant, and for this constitutional outrage he obtained a verdict for £10,000 against the secretary of state. The same event began his memorable conflict with the House of Commons. His expulsion in 1764 opened the question how far the majority of the house was entitled to deprive constituents of the privilege of having their own representative, and he triumphed by the obnoxious resolutions being expunged in 1782. He had the art in all his struggles to keep not only on the popular, but the constitutional side. When no longer attacked he fell into insignificance, which, perhaps, he did not dislike, as he had secured some lucrative offices. He died on 27th December, 1797. [J.H.B.]

WILKIE, SIR DAVID, was born in the parish of Cults in Fifeshire, November 18, 1785. In 1799 he attended the Trustees' Academy at Edinburgh; entered as a student of the Royal Academy of London in 1805, and became at once a famous painter by the exhibition of his 'Village Politicians' in the following year. He became a member of the Royal Academy in 1811; visited the continent in 1825, for the sake of recruiting his health, and remained abroad three years. When he returned he forsook *genre* painting to which he owed his great popularity, and substituted a loose sketchy style of execution, and devoted himself henceforth chiefly to history and portrait. The change proved to be unwise: he failed in portrait, and from being the prince of *genre*-painters, he became only a very interior painter of history. He was knighted in 1836; he had already been appointed limner to the king in Scotland, and painter in ordinary to his majesty. In an unlucky hour in the autumn of 1840, Sir David set out for a tour in the East; he visited Constantinople, the Holy Land, and Egypt; he complained of illness while at Alexandria, and expired suddenly on board the Oriental steamer, off Gibraltar, June 1, 1841, and his body was committed on the same day to the deep; the coffin was lowered into the sea in 46° 20′ north lat., and 60° 24′ west long.—(Allan Cunningham, *Life of Sir David Wilkie*, &c. London, 1843. *The Wilkie Gallery*, &c. See also the *Penny Cyclopædia*.) [R.N.W.]

WILKIE, WILLIAM, a Scottish minister and professor of philosophy at St. Andrews, author of 'The Epigoniad,' an epic poem, 1721-1772.

WILKINS, SIR CHARLES, called the 'father of Sanscrit literature,' was born at Frome, in Somersetshire, 1749, and went to Bengal in the civil service 1770. He resided in India fifteen years, and in that period translated the Bhagavat Gita into English, and exhibited his mechanical skill in making the first Bengali and Persian types used in Bengal. On arriving in England he became librarian to the Directors of the East India Company, and published in succession the 'Fables of Vischnou Sarma,' better known in Europe as the 'Fables of Pilpay,' his 'Arabic Grammar,' an edition of 'Richardson's Dictionary' enlarged, and other works. Died 1836.

WILKINS, DAVID, rector of Hadleigh, in Suffolk, and archdeacon of that county, known as an antiquarian and Saxon scholar, 1685-1745.

WILKINS, JOHN, brother-in-law of Oliver Cromwell, and bishop of Chester, was born in Northamptonshire 1614. He was distinguished for his learning, especially as a mathematician, and is the inventor of the perambulator or wheel for measuring distances. Died at the house of his friend, Dr. Tillotson, in London, 1672.

WILKINS, WILLIAM, an architect and writer on architecture, was born at Cambridge, where his father was a builder, in 1778, and succeeded Sir John Soane as professor at the Royal Academy in 1837. The principal of his edifices are the London University, St. George's Hospital, the University Club House, and the National Gallery in Trafalgar Square. His literary works are 'Remarks on the Buildings and Antiquities of Athens,' and 'The Civil Architecture of Vitruvius.' Died 1839.

WILL, G. A., a Germ. numismatist, 1724-1798.

WILLÆRTS, ADAM, a Flemish marine painter, 1577-1640. His son, ABRAHAM, born 1615.

WILLAMOV, J. G., a Russian poet, 1757-[illegible]

WILLAN, ROBERT, a physician of London, as a professional and religious writer, 1757-18[illegible]

WILLDENOW, CHARLES LOUIS, a distinguished botanist, member of the Academy Sciences and director of the botanic garden at Berlin; he wrote several works on plants, and collected a Zoological Cabinet which he presented the museum, flourished 1765-1812.

WILLE, J. G., a German engraver, 1717-18[illegible]

WILLEMET, P. R. F., a French botanist and traveller in the East Indies, 1762-1790.

WILLEMET, RENIE, a French botanist, director of the botanic garden at Nancy, 1735-1807.

WILLEMIN, N. X., a French antiquarian, designer, and engraver, author of 'The Civil and Military Customs of Antiquity,' 1764-1833.

WILLEMUR, L. De Penen, Count De, a Spanish general and statesman, 1761-1836.

WILLERMOZ, P. J., a French physician and chemist, 1735-1799. His son, P. C. Catharine, a physician and anatomist, 1767-1810.

WILLET, Andrew, a learned divine of Cambridgeshire, author of works written against popery, and other theological subjects, born at Ely 1562, died 1621.

WILLIAM THE CONQUEROR. William I., king of England, was the illegitimate son of Robert duke of Normandy, by Arlotta, the daughter of a tanner of Falaise. He was born in 1027. His father had no legitimate children; and when Duke Robert departed on a pilgrimage to the Holy Land, he persuaded his barons to swear allegiance to young William as his heir. Duke Robert died while returning from Palestine in 1035; and during the first years of William's dukedom, the ambitious feuds of the Norman barons and the aggressions of the king of France placed Normandy in a perilous state of anarchy and weakness. But as soon as William grew out of boyhood, he began to govern for himself; and after years of jeopardy and strife, he established a degree of order in his duchy, which was unknown in the rest of Europe, and he made himself universally known and respected among the princes of Christendom. William was related to Edward the Confessor king of England; and he long watched anxiously for the time when the death of that childless sovereign should give him the opportunity for making himself king of this country. Edward died on the 5th January, 1066; and the Saxon Harold was chosen by the English to succeed him. But William speedily asserted his claims. Besides his relationship to the late king, he had been nominated, or he pretended that he had been nominated by the dying Edward as his successor: and he had in the preceding year taken advantage of the temporary presence of his rival in Normandy, to make Harold, partly by force and partly by fraud, swear to help him in obtaining the crown of England. As soon as King Edward was dead, William demanded the execution of this promise; and, on Harold's refusal, he prepared to assert his rights by the sword. He assembled, for the invasion of England, a host which Mackintosh has rightly termed 'the most remarkable and formidable armament which the western nations had witnessed.' He landed with this army in Pevensey Bay, 29th September, 1066, and on the 14th of the next month he fought and won the decisive battle of Hastings, in which Harold and the bravest thanes of southern and central England perished. William advanced and occupied London, the Saxons generally submitting themselves to him; and he was crowned king of England at Westminster on Christmas day, 1066. His first his rule was comparatively mild; but the Norman spirit chafed under the sense of foreign domination, and under the insolence of the Norman barons and prelates of the new king. Then came fierce local risings, with delusive partial successes over the foreigners, soon crushed by the disciplined troops and high military genius of the Conqueror. Then followed the revengeful cruelties of the king, the effects not so much of hasty anger, as of stern remorseless policy. He was resolved to establish his dominion and his dynasty firmly in England; and neither fear nor mercy ever made William pause in employing the most efficacious means to work out a settled purpose. The insurrections of the Saxons were visited by him with confiscation, massacre, and devastation; and it is computed that a third of the old Saxon population of England was swept from the land during his invasion and reign. But, terrible as are the acts of cruelty with which William's memory is associated, it would be unjust to let them blind us to the high qualities which he displayed, as a ruler, and as an ordainer of our institutions. He maintained the strictest order and internal peace. His military renown checked the ambition and cupidity of the marauding Danes, who had infested the English coasts for more than two centuries. He organized the feudal system here, with changes from its development on the continent, so as to keep down the turbulent insubordination and lawless violence of the nobility. He retained (though with many important modifications) the Saxon popular tribunals; and altogether he may be truly said to have displayed a marvellous discernment of the two great principles of government, which require centralized power in matters of imperial importance, and local self-government in matters of chiefly local interest. William the Conqueror died in 1087. It ought to be added that, like all the race of his great ancestor, Rolf the Ganger, who conquered Neustria 150 years before William conquered England, he was eminent for his appreciation of intellect, science, art, and learning, and for liberality to all men of all nations by whom they were displayed. [E.S.C.]

WILLIAM II., king of England, second son of the preceding, was born in 1060, and succeeded his father in the absence of his elder brother, Robert, 1087. The latter also allowed him to acquire the dukedom of Normandy by purchase, and then joined the crusaders. William reigned nearly thirteen years, and was killed in the New Forest by an accident, as commonly supposed, in 1100. He was surnamed *Rufus*, the red or ruddy, and bears the reputation of an evil and avaricious man.

WILLIAM III., king of England, stadtholder of Holland, and prince of Orange, was the son of William II., stadtholder of Holland, and of Mary, daughter of Charles I. of England. He was born November 14, 1650. His father had died a little more than a week before the young prince's birth, and the party of aristocratic republicans among the Dutch, that was hostile to the ascendency of the house of Orange, eagerly took this opportunity of curtailing its power; and prevented the offices of stadtholder and captain-general, which the father had held, from being conferred on the infant son. The great wealth and hereditary estates of the prince of Orange, his connection with the royal families of England and France, and the popularity of his name and house among the common people, still made young William an object of anxiety to the leading Dutch statesmen; and he grew up surrounded by the officers and spies of a jealous government, that watched his every action and word, and every growing tendency of his disposition with pretended courtesy but real suspicion.

William thus early acquired, as a defence against the snares around him, the reserved manners, and the habits of secrecy and self-reliance, that marked him throughout life. When he was twenty-one, the disasters of the war against England and France, in which the Dutch were then involved, caused a general movement among the mass of the people against the De Witts and the other aristocratic chiefs of the commonwealth. William was made stadtholder, and continued with this office and that of captain-general, and the other high powers which his ancestors had enjoyed. It is a deep blot on his fame that at this crisis of his life he neither exerted himself to prevent the murder of the De Witts by the infuriated people, nor did he take any steps to bring the murderers to justice. Towards the country, that thus made him its chief at a time of unexampled distress and peril, William did his duty nobly. He encouraged the Dutch to reject the degrading terms of peace which the hostile kings offered, and to defend their fatherland, town by town, and inch by inch. Nay, he exhorted them, rather than submit, to embark on board their vessels and found a new free state in the East Indies. He himself spurned with indignation the offers of Louis XIV. to bribe him by making him king of the United Provinces under the protection of England and France. When the French envoy pointed out to him the immense power of the invading armies, and that he was sure, if he rejected the proposals, to see both himself and Holland irretrievably ruined, William answered, 'I have thought of the means to avoid beholding the ruin of my country: I can die in the last ditch.' His heroism had its just reward. The progress of the French armies over Holland was checked. The emperor of Germany and other powers combined against Louis XIV. Charles II. of England was compelled by his parliament and people to make peace with the Dutch; and at last the treaty of Nimeguen, 1678, left Holland free and independent after a war, in which William, though he met with frequent reverses, had won the admiration of Europe as a general and as a statesman. In the same year he married the princess Mary of England, daughter of James II. by his first wife. William watched with the deepest interest the struggle of parties in this country. He felt that his own peculiar mission was to defend the cause of civil and religious liberty in Europe against the ambition and bigotry of Louis XIV. If England could be brought to fill her natural place as a free and a protestant state in this great strife William was confident of the result. But Holland and her other allies were unequal to a continued contest against the power of France, if England, under her Stuart rulers, was to act again as the tool and accomplice of the Bourbons. Hence, when the English, in 1688, sought the intervention of William against the misgovernment of James II., William eagerly embarked in the great enterprise of his age. He landed in this country in the November of that year, and gained almost bloodless possession of the kingdom. The houses of parliament solemnly chose him king of England by the bill of rights. In Scotland and Ireland the adherents of the abdicated monarch made some resistance in arms, but were ultimately put down. William himself decided the Irish war by the great victory of the Boyne, which he gained in person over James and his followers. William's reign over these kingdoms was disquieted by many jealousies between him and his new subjects. He was offended at the limitations on the royal power and revenue, which the English Whigs introduced, and he was of course regarded with the bitterest animosity by the Jacobites, who cherished the fallen cause of the Stuarts. The war also against France, which was the necessary consequence of the Revolution of 1688, brought many burdens on this country, and was attended with many losses in the field. The peace of Ryswick in 1697 was regarded by all parties as no more than an armed truce; and it was well known that Louis XIV. was scheming to unite the vast possessions of the Spanish crown to the dominion of France. William sought to prevent this by two treaties between the principal European powers for the partition of the Spanish provinces on the death of the reigning king. But this only incensed the court of Madrid, and when the king of Spain died in 1700, it was found that he had bequeathed all his crowns to the grandson of Louis XIV., who forthwith repudiated the partition treaties, and prepared to seize this rich inheritance for the house of Bourbon. William now applied all his energies to form a new league against France; but in the midst of his warlike preparations he died at Kensington, 8th March, 1702. William III. was unquestionably a great man, but he was one of those coldly great men, who rather extort our admiration from our reason, than raise the sympathy or enthusiasm of our hearts. His permission of the massacre of the clan Macdonald, at Glencoe, is (like his conduct with regard to the De Witts,) a grievous stain on his memory. But we must judge him by the general character of his actions, and not by one or two culpable deeds. We must look to the circumstances in which he was placed; and we must consider what would have been the probable current of events in the latter portion of the seventeenth century, and in all after time, if the fraud, the rapacity, and intolerance of Louis XIV. and our own Stuarts had not been encountered by an opponent so resolute, so vigilant, so high-minded, and [illegible] mitable as William III. If we judge him [illegible] we shall feel that he deserves the imperishable gratitude of posterity, as the rescuer and preserver of our national independence, our constitutional liberties, and our right to worship according to free conscience and a pure faith. [E.]

WILLIAM (HENRY) IV., third son of George III., was born August 21, 1765, and entered the navy as a midshipman in the fourteenth year of his age. He reached the rank of admiral in 1811. In 1818 he married the princess Adelaide, second daughter of the duke of Saxe-Meiningen, who bore him two daughters, neither of whom survived infancy. He became heir presumptive to the throne by the death of the duke of York in 1827, and succeeded George IV. June 26, 1830; died June 20, 1837. The great event of his reign was the establishment of the Reform Bill, by which this country was saved from the verge of a revolution. He left [illegible] natural children, known as the FITZ-CLARENCES.

WILLIAM, *king of Scotland*, surnamed 'the Lion,' succeeded his brother, Malcolm IV., 1165, and died 1214. He was succeeded by Alexander

ations were making to introduce
the inquisition, and this in the midst of a people already half Lutherans and Calvinists. In 1566 the nobles went in procession, and petitioned Margaret against this measure, and as they were treated with contempt, their remonstrances were followed by popular commotions. On this Alva was sent, at whose approach a hundred thousand of the most industrious Flemings took refuge in foreign countries, chiefly in England. This was the crisis at which William of Orange came forward, and raised the standard of independence, and the desperate circumstances under which he called the people to arms, may be referred to in the article ALVA. Though that monster of cruelty was recalled at the end of six years, 1574, and replaced by a milder ruler, the Dutch continued the war, and Holland was liberated by the relief of Leyden, which William effected by laying the whole country under water, 1575. He was now elected stadtholder, and Calvinism became the established religion, to the exclusion of Lutheranism as well as the Roman Catholic faith. By the 'Pacification of Ghent' in 1576, William united all the provinces in one confederation, but he found it impossible to heal these internal causes of disunion, and the Spaniards, taking advantage of them, were able to repossess themselves of the southern provinces, under the duke of Parma, whence arose the present distinction between Holland and Belgium. Philip had now set a price on William's head, and, in 1582, an attempt was made to assassinate him, but he recovered from the wound. A second attempt, in 1584, was but too successful. One Balthaser Gerard, being introduced to the stadtholder on the plea of business, he suddenly drew a pistol, loaded with three balls, and shot him in the body. The prince expired almost instantly: his last words were, 'May God have mercy on me, and these poor people!' He was succeeded, and the war carried on successfully, by his second son, MAURICE OF NASSAU. [E.R.]

WILLIAM, two kings of Holland, WILLIAM (FREDERICK) I., styled king of the Netherlands, grand duke of Luxembourg, prince of Orange, and duke of Nassau, was born at the Hague in 1772. He distinguished himself in the wars with the French republic, and became an exile with his father, the hereditary stadtholder of the Dutch republic, in 1795; after his father's death he succeeded first to the duchy of Nassau, and joined the Prussian army against Napoleon. He became king of Holland by the settlement of affairs which followed the fall of Napoleon in 1814, the countries united under his rule by the congress of Vienna being the old united provinces of Holland, the bishopric of Liège, and Belgium: the latter, however, was separated by the revolution of 1830. He abdicated in 1840, and died in 1843. WILLIAM II., son and successor of the preceding as king of Holland, was born in 1792, and distinguished himself in the peninsular war under Lord Wellington; he also commanded the army of the Netherlands at the battle of Waterloo. His reign commenced from his father's abdication in 1840, and he died a few days after the revolution of March, 1848.

WILLIAM OF APULIA, a Latin poet and historian of the 12th century.

WILLIAM OF AUVERGNE, or OF PARIS, a French prelate and theologian, died 1249.

WILLIAM OF WYKEHAM. See WYKEHAM.

WILLIAMS, ANNA, a miscellaneous and poetical writer, was the daughter of a Welch surgeon, whom she accompanied to London in 1730, and supported many years by the labour of her pen. In 1740 she became blind from cataract, and then had recourse to her needle till she was admitted under the roof of Dr. Johnson, who was struck with admiration of her generous devotion. She died in his house, Bolt Court, Fleet-Street, in the seventy-seventh year of her age, 1783.

WILLIAMS, SIR CHARLES HANBURY, a diplomatist and man of letters, 1709-1759.

WILLIAMS, COOPER, a chaplain in the navy, and writer of voyages, &c., 1767-1816.

WILLIAMS, DANIEL, many years minister to a presbyterian congregation in Dublin, was born about 1644, at Wrexham, in Denbighshire. The latter part of his life was passed in London, and he left his library in Redcross-Street, Cripplegate, for the use of dissenting ministers. Died 1716.

WILLIAMS, DAVID, founder of the 'Literary Fund,' was born in Cardiganshire, 1738; and after officiating some time as a dissenting minister, became a teacher of deism. This speculation not answering, Mr. Williams devoted himself to private teaching and literature, and at the close of his life was supported by the excellent institution he had himself projected. His principal works are an edition of 'Hume's History,' 'Lectures on Education,' 'Lectures on Political Principles,' 'History of Monmouthshire,' &c. Died 1816.

WILLIAMS, EPHRAIM, an American general, founder of the college named after him, died about 1791.

WILLIAMS, F., a creole writer, died 1770.

WILLIAMS, GRIFFITH, bishop of Ossory, in Ireland, was born at Cærnarvon, about 1589, and in the rebellion of 1641 became an exile from his see, which he recovered at the restoration. He wrote several religious works, and an account of the persecutions he had suffered. Died 1672.

WILLIAMS, H. M., a female artist, 1759-1827.

WILLIAMS, JOHN, archbishop of York, and lord keeper in the reign of James I., was born at Aberconway in Cærnarvonshire, 1582. He succeeded Lord Bacon as chancellor in 1621, and was raised to the see of York in 1641. During the rebellion he fortified and defended Conway castle in the interest of the king. Died 1650.

WILLIAMS, JOHN, a learned prelate, one of the divines who were promoted after the revolution of 1688, b. in Northamptonshire 1634, d. 1709.

WILLIAMS, JOHN, the martyr of Erromanga, was born in a very humble rank, but being imbued with deep feelings of piety, early resolved to devote himself to missionary labours, and by his self-denying and zealous prosecution of his work, has obtained a name among the foremost of his evangelical contemporaries. Having entered into the service of the London Missionary Society, he was sent out in 1817 to their station in the South Sea Islands; and the scene of his first duties there was in the Raiatea—the largest and most central of the Society Islands, situated about one hundred miles' distance from Tahiti. He afterwards removed to what is called the Hervey Group of Islands, and having discovered Rarotonga, the largest of the group, landed with a view to establish himself there. During eleven years he prosecuted the work of an evangelist on that island, and on reviewing his course at his departure, could bear this wonderful and gratifying testimony: 'When I found them in 1823, they were entirely savages, and when I left them, they had not only embraced the Christian profession, but I am not aware that there was a house in the island where family prayer was not observed every morning and evening.'—Burning with zeal to introduce the gospel into every island of the Pacific, this indefatigable missionary removed to another group—the New Hebrides, which lay far westward. Having been welcomed to the island of Parna, Mr. Williams prepared to make a similar attempt in Erromanga. On approaching it, he and his two companions hailed some of the natives who were sailing in a canoe, and found they spoke a different language—were of a darker complexion—shorter in stature—wilder in their appearance, and more jealous of the intentions of strangers, than the people in Parna. The missionaries tried to propitiate them by offering them some bread, and requesting the chief to give them some water, which he speedily fetched. Encouraged by these appearances, they waded ashore; but scarcely had they landed, when they ran in all haste back to the sea, being pursued with hostile weapons by the savages. Mr. Williams had reached the edge of the water, but the beach being rugged and steep, he stumbled and fell, when the native who pursued him, taking advantage of the fall, struck him repeated blows with a club. Others running up, completed the work of destruction, by piercing his body with arrows. Before his two companions could venture to make the slightest attempt to rescue him, the savages had dragged the mangled remains away with them. Thus perished, in the prime of life and usefulness, a missionary who was 'in labours abundant;' and whose 'Narrative'—full of the most interesting and delightful details,—has been beautifully and justly styled, 'A Modern Acts of the Apostles.' [E.J.]

WILLIAMS, SIR ROGER, a native of Monmouthshire, dist. in the Flemish wars, died 1595.

WILLIAMSON, HUGH, an American physician, astronomer, and member of congress, author of a 'History of North Carolina,' and 'Observations on the Climate of America,' 1735-1819.

WILLIAMSON, SIR JOSEPH, a statesman and collector of manuscripts, born at Cumberland, where his father was a clergyman, about 1638. He began his public career as clerk of the council after the restoration, and became principal secretary of state in 1674; died 1701.

WILLIS, FRANCIS, a clergyman of the Church of England, whose attention to mental disorders led to his adoption of the medical profession, and to his appointment as physician to George III.; died 1807.

WILLIS, THOMAS, a distinguished English anatomist and physician, born at Great Bedwin, in Wiltshire, in 1622, and died at London in 1675, in the fifty-fourth year of his age. Willis belonged to the sect of Iatro-chemists, who resolved all the motions of the human body, in health and disease, into the chemical action and reaction of the solids and fluids of which it is composed. He was deeply involved in the controversies of his age, but the work by which his name is known to posterity is that on the

Anatomy of the Brain and Nerves, *Cerebri Anatome, cui accessit Nervorum descriptio et Usus*, which was published at London in 1664. Some of the opinions contained in this book are remarkable as being anticipations of the ideas on the functions of the brain long afterwards propounded by Gall, for he not only maintained that the cerebrum is the seat of the intellectual faculties, and the cerebellum of the involuntary movements, but that each part of the brain has its own separate functions. Another treatise on the soul of brutes, *De Anima Brutorum*, published in 1672, involved him in irritating disputes with theologians of the time, which are thought to have shortened his days. [J.M'C.]

WILLOUGHBY, Sir Hugh, commander in a voyage of discovery which sailed from London in 1553, at the instance of a company of merchants directed by Sebastian Cabot. The expedition, consisting of three vessels, was last heard of off Finmark, on the 30th July in that year, soon after which all must have perished.

WILLUGHBY, Francis, a famous naturalist and friend of Ray, who arranged and published his MSS. on icthyology, 1635-1672.

WILLYMOT, W., an English clergyman, schoolmaster, and classical editor, died 1737.

WILMOT, John. See Rochester.

WILMOT, John Eardley, chief justice of the Common Pleas, was born at Derby in 1709, and died 1792. He wrote 'Notes of Opinions,' which were published by his son in 1802. The latter, same names as his father, was born at Derby in 1748, and attained great eminence as a chancery lawyer. He died in 1815.

WILSON, Alexander, a celebrated ornithologist, was born in Paisley in 1766. He died in 1813. His father was a man in poor circumstances, and Wilson himself was brought up to the trade of a weaver. His education was well attended to in early life, and he was possessed of an ardent poetic temperament of mind, accompanied with a strong predilection for the beauties of nature. He became disgusted with the drudgery of the loom; gave free vent to his poetical disposition, and for nearly three years he wandered over the country as a pedlar, selling muslins and poems. Both poetry and pedlary, however, turned out failures in his hands, and an unfortunate dispute between the journeymen and master weavers, in which he took an active part, rendering his residence in his native country extremely unpleasant to him, he emigrated to America. He arrived in that country in 1794, and for eight years he supported himself by weaving or perambulating the country with his pack, occasionally surveying land for the farmers, and latterly by teaching. In 1802 he was offered an engagement in a seminary at Kingsessing on the Schuylkill, whither he immediately removed, and which fortunately procured him the patronage of some kind and influential friends. Amongst these was Mr. Lawson the engraver, who taught him drawing, colouring, and etching. Previous to his coming to America he had never shown any taste for ornithology; but his application now to drawing seemed to develop his latent talent. His first attempts were not successful, but as soon as he commenced the delineation of birds he made rapid progress. His success seems to have first suggested the idea of his American Ornithology. To accomplish this work he undertook many journeys through various parts of America, sleeping for weeks in the wilderness alone with his gun and his pistols in his bosom, performing solitary voyages on the great rivers in a frail canoe, and collecting all the birds of the districts through which he travelled. He drew, etched, and coloured all the plates himself, and after many delays and disappointments, he at last procured a publisher, and produced a first volume of his celebrated work. It far exceeded the expectations of the public, and eight volumes successively made their appearance, and procured him great and deserved reputation. Before he could finish his great undertakings, he was seized with a sudden and severe illness, and died at the age of forty-eight. Wilson's great wish was, to use his own words, 'to raise some beacon to show that such a man had lived;' and though his death was premature, he lived long enough to accomplish the object of his ambition. [W.B.]

WILSON, Arthur, an English historian, who was secretary to Robert, earl of Essex, and steward to the earl of Warwick, 1596-1652.

WILSON, Florence, a Latin scholar and professor of philosophy, born at Elgin in Scotland, about the beginning of the 16th century, died in Dauphiny, on his way home from Navarre, 1547 The work by which he is known is a dialogue, entitled 'De Tranquilitate Animi.'

WILSON, H., an English navigator, died 1810

WILSON, James, a navigator, who discovered the islands called Duff's group in 1796.

WILSON, John, a composer of sacred music, born at Faversham in Kent, 1594, died 1673.

WILSON, John, a Scotch vocalist, who attained great popularity by his manner of singing the beautiful lyrics of his native land. Born 1800, died at Quebec in 1849, while on a professional visit to America.

WILSON, John, better known for many years of his life by the soubriquet of Christopher North, was born in the town of Paisley in 1785, or, as some accounts say, in 1788. His father was an eminent merchant there, and the paternal mansion in the High-Street of that ancient borough, still attests the wealth and dignity of the family by its stately urban magnificence. Wilson received the elements of his education, we believe, with the late Mr. Peddie of Paisley, and afterwards under the superintendence of the parish minister of Mearns; at the age of thirteen he entered the university of Glasgow, and afterwards that of Oxford, in Magdalen College. From the latter source he doubtless imbibed that familiar acquaintance with, and rich appreciation of the classic writers, which, in happy union with his other qualities, constituted him one of the most eminent writers and literary men of his day. The first poem he ever published obtained the Newdegate prize in his venerable Alma Mater. For some years afterwards he lived at his beautiful retreat of Elleray, on Windermere, when, as a matter of course, he became intimate with Coleridge, Southey, and Wordsworth, the leading apostles of what was then called the Lake School of Poetry; and the dreamy sweetness of whose style of composition tended to dilute and weaken the simplicity and vigour of his own. Pecuniary causes obliging him to leave Elleray, he joined his mother in Edinburgh, who was a woman of a high

order of intellect, qualified to be the monitor and helper of so erratic a spirit. Here he began to study the law for the profession of a barrister, but never actually assumed the professional toga. In 1812 appeared the Isle of Palms, and soon afterwards the City of the Plague, and Unimore, the principal contributions of his fanciful and capricious muse. There is a soft, liquid flow of musical expression in these poems, with a vague, dreamy wildness and pathos, in combination with an exuberant fancy; and in the City of the Plague an irregular vigour and richness of imagination, resembling the *outre* grandeur of some of our old English dramatists. It is as a prose writer, however, that Wilson takes rank among the literary Titans of his native land. His novels are not much read now, being over-informed with sentiment, and the characters pitched far above the average of Scottish rural and urban nature. The Trials of Margaret Lindsay and the Foresters are, however, exquisite specimens of composition as poetic prose. In 1820 he succeeded the celebrated Dr. Brown as professor of moral philosophy in the university of Edinburgh, an appointment severely and justly commented upon at the time; and if we take Dr. Chalmers as an authority, whose dictum it was, that moral philosophy was the gate to theology, it reflected as little credit upon those who appointed, as upon him who accepted. At the same time began, and certainly oddly enough, his connection with *Blackwood's Magazine*, where appeared that famous series of political and literary pieces, which set all Edinburgh in a flame, so well known as the Noctes Ambrosianæ. Wilson was always considered as the presiding *genius loci*, and amongst his associates were John Gibson Lockhart and the Ettrick Shepherd, the latter chiefly as a butt. Rich in broad, coarse humour, and violating, not seldom, the conventional courtesies and even decencies of political and personal intercourse, their irresistible waggery, and biting sarcasm, raised the Edinburgh periodical to the high station it has always maintained. The genius of Wilson arose out of the rich overflow and exuberance of his animal spirits, themselves the result of a finely developed physical constitution, in fact, of a *physique* the most imposing and attractive that perhaps ever son of song was gifted with. We believe that the stories of the excesses of his youth and manhood were much exaggerated, as his fertile fancy and rich classical resources, with his irresistible tendency towards the ridiculous, would elevate him by their intense exercise, into a condition very like *ebrius*, if not *ebriosus*. In 1851, he resigned the situation of professor of moral philosophy in the university of Edinburgh; having been struck with paralysis, and expired on the 4th of April, 1854. With great propriety a Whig government granted him a pension of £300 a-year, and having lived down in himself, and in the minds of many others, the political acerbities of his youth and manhood, this eminent Scotsman has passed away, to occupy no mean niche in the Scottish Temple of Fame. [T.D.]

WILSON, Richard, R.A. This great landscape painter was born at Pinegas, Montgomeryshire, and showing an early taste for drawing, was taken to London by Sir George Wynne, and placed with a portrait painter of the name of Wright. Wilson himself commenced his career as a portrait painter, and took to landscape first in Italy in 1749, by the advice of Zuccarelli and Vernet. Wilson returned to London in 1755, after an absence of six years, and acquired a great name in 1760 by his picture of 'Niobe.' He was one of the original thirty-six members of the Royal Academy, and succeeded Hayman as librarian in 1776. Towards the close of his life he came into possession of some property from a deceased brother, and he retired to the village of Llanverris, where he died in 1782. Wilson, admirable as his pictures are, was not successful, some of his works sold better than others, and these he accordingly frequently repeated, but generally with some slight difference. The figures of his pictures were frequently inserted by Mortimer and Hayman; his principal works are views in Italy; many of them have been admirably engraved by Woollett.—(T. Wright, *Some Account of the Life of Richard Wilson, R.A.* London, 1824.) [R.N.W.]

WILSON, Sir Robert, a British officer and politician, was born in London 1777, and commenced his military career in Flanders under the duke of York. He distinguished himself on many occasions during the wars against Napoleon, and was in Paris after his fall in 1815, where he aided in the escape of Lavalette. He sat in parliament as member for Southwark from 1818 to 1831, and in 1842 was appointed governor of Gibraltar. Died 1849.

WILSON, Thomas, bishop of Sodor and Man, greatly distinguished for his pious and exemplary conduct, was born in Chester 1663, and educated at Dublin. He was appointed to his bishopric in 1697, and refused to leave his people when preferment was offered to him. He wrote a 'History of the Isle of Man' and some religious works, but is chiefly distinguished for his acts of practical benevolence; died in 1755.—His only son, of the same name, born in 1703, was rector of St. Stephens, Walbrook, for forty-six years. He rendered himself remarkable by his devoted admiration of the historian, Mrs. Macaulay, to whom he erected a statue in his church under the name of 'Liberty.' He wrote several works, among which are 'The Ornaments of Churches Considered,' 'A View of the Projected Improvements in Westminster,' and a pamphlet against distilled liquors. Died 1784.

WILSON, Sir Thomas, a statesman and learned writer, age of Elizabeth, died 1581.

WILSON, William Rae, a Scotch scholar, author of 'Travels in the Holy Land,' 1774-1843.

WILTON, Joseph, a sculptor, 1722-1803.

WILTZ, P., a French ascetic, 1671-1749.

WIMPFEN, Felix De, a French officer and member of the estates-general, born 1745, pensioned by the first consul in 1799, died in the employ of the state 1814. His brother, the Baron De Wimpfen Bornebourg, a general and writer on tactics, 1732-1800.

WINCHESTER, T., rector of Appleton, in Berkshire, and a learned writer, known 1749-1773.

WINCKELMANN, John, a German protestant theologian, 1551-1626. His son, John Justus, an historian, born at Gnessen 1620, died 1697.

WINCKELRIED, Arnold De, a Swiss peasant, who died gloriously fighting against the Austrians at Sempach, 1386.

WINCKLEMANN, JOHN JOACHIM, a celebrated name in æsthetical and art literature, was born in the duchy of Brandenburg 1718. He devoted himself to the study of antiquities at Rome, where he obtained an appointment in the Vatican, and was murdered at Trieste on his way homewards for the sake of some golden medals he possessed, in 1768. His works on the history of art and ancient monuments have exercised the happiest influence on that description of literature, and are still invaluable as mines of information.

WINCKLER, T. F., an archæologist, 1771-1807.

WINDER, HENRY, a learned pastor of the nonconformists, author of a 'Hebrew English Concordance,' and other works, 1693-1752.

WINDHAM, JOSEPH, an artist and antiquarian, principal author of the 'Ionian Antiquities,' published by the Society of Dilettanti, 1739-1810.

WINDHAM, WILLIAM, a Whig statesman of the period of Pitt, was born in Norfolk, of an ancient family, in 1750, and made his first appearance in parliament as member for Norwich in 1783. His talents caused him to be singled out by Burke as one of his coadjutors, and he always remained his constant friend and partizan. From 1794 to 1801 he was in office under Pitt as secretary at war. He became secretary again under Lord Grenville after the death of Pitt, and held office from 1806 to March 25, 1807; d. 1810.

WINDHEIM, C. E., a German professor of philosophy and the Oriental languages, 1722-1766.

WINDISCH, C. G., a Germ. historian, 1725-93.

WING, VINCENT, an astronomer, 17th century.

WINGATE, EDMUND, an eminent mathemat., lawyer, and member of parliament, 1593-1656.

WINKELMANN. See WINCKELMANN.

WINKLER, J. H., a German jurisconsult and philosopher of the school of Wolfe, 1703-1772.

WINSLOW, EDWARD, the English governor of Plymouth, in North America, author of 'Good News from New England,' died 1655.

WINSLOW, JAMES, an eminent anatomist, born in the island of Funen, in Denmark, in the year 1669, and died at Paris in the year 1760, in the ninety-first year of his age. His system of anatomy was long the standard class-book of the schools, but in modern times it has been superseded by more perfect and more recent works. [J.M'C.]

WINSOR, FREDERICK ALBERT, the projector of the present method of lighting the streets by gas, first adopted in Pall Mall, after some smaller experiments, in 1809. Died 1830.

WINSTANLEY, WM., originally a barber, author of several literary compilations, d. abt. 1690.

WINSTON, T., an Engl. physician, 1575-1655.

WINTER, G. S., a German veterinarian, 17th c.

WINTER, JOHN WILLIAM DE, a Dutch vice-admiral, who entered the French service under Dumouriez as a partizan of the revolution, and was defeated in the Texel, at a later period, by Duncan, 1750-1812.

WINTER, N. S. VAN, a Dutch poet, born at Amsterdam, 1718. His wife, LUCRETIA WILHELMINA, a poetess, 1722-1795. PETER, son of Van Winter by a first marriage, author of poems and translations, beginning of the present century.

WINTER, P. VON, a Ger. musician, 1754-1825.

WINTHROP, J., an American astron., 1714-79.

WINTLE, T., a learned divine, 1737-1814.

WINTRINGHAM, CLIFTON, a physician and professional writer, died at York 1748. His son, SIR CLIFTON, also a physician and wr., 1714-94.

WINWOOD, SIR RALPH, a statesman and diplomatist, author of 'Memorials,' 1565-1617.

WIRSUNG, C., a German physician, 1500-1571. JOHN GEORGE, an anatomist, assass. 1643.

WIRTZ, J., a Swiss painter, 1640-1709.

WIRTZ, J. C., a Swiss theologian, 1688-1769.

WISE, F., a learned antiquary, 1695-1762.

WISEMAN, R., a surgical writer, 17th century.

WISHART, GEORGE, a martyr of the reformation in Scotland, burnt alive 1546.

WISHART, W., a Scotch divine, 1657-1727.

WISHEART, GEORGE, chaplain to Montrose, period of the civil wars, author of an 'Account of the Wars in Scotland,' and a Biography of his patron, 1609-1671.

WISTAR, CASPAR, a professor of anatomy and physician at Philadelphia, author of professional works, and a 'System of Anatomy,' 1760-1818.

WITCHELL, G., an astronomer, 1728-1785.

WITEZOWITCH, P., a learned historian and antiquarian of Dalmatia, died 1778.

WITHER, G., an English poet, 1588-1667.

WITHERING, WILLIAM, a physician and naturalist, author of a 'Systematic Arrangement of British Plants,' born in Shropshire 1741, d. 1799.

WITHERSPOON, JOHN, a descendant of Knox, known as a divine in Scotland and America, born near Edinburgh 1722, died 1794.

WITSIUS, or WITS, HERMAN, a Dutch divine, author of several learned works, 1636-1708.

WITT. See DE-WITT.

WITTE, E., a Dutch painter, 1607-1692.

WITTE, G. DE, a Flem. theologian, 1638-1721.

WITTE, or WITTEN, HENNING, a German divine and biographical writer, 1634-1696.

WITTICHIUS, CHRISTOPHER, a protestant theologian and writer against Spinoza, 1625-1687.

WITTOLA, M. A., a Ger. theologian, 1736-97

WITTWER, P. L., a Ger. physician, 1752-92.

WLOOSWICK, F. N. BARON HORN VAN, a Dutch archæologist, born 1742, died in Paris 1809.

WOBESER, E. W., a German poet, 1727-1795.

WODHULL, M., a poet and translator of Euripides, born in Northamptonshire 1740, died 1816.

WODROW, ROBERT, a Scottish ecclesiastical historian, born at Glasgow 1679, died 1734.

WOEHNER, A. G., a Ger. Orient., 1693-1762.

WOELFT, J., a German composer, 1772-1811.

WOFFINGTON, MARGARET, a celebrated actress of last century, whose society was highly valued by the *elite* of talent and fashion, 1718-60.

WOIDE, C. G., a Dutch Orientalist, 1725-90.

WOKEN, F., a German theologian, 1685-1734.

WOLCOTT, JOHN, commonly known by his assumed name of *Peter Pindar*, was a satirical poet and humourist, born at Dodbrooke in Devonshire 1738; died in London, where he supported himself by his pen, and his skill as an artist, 1819. The painter Opie was indebted to him for his introduction to the busy world of London, Dr. Wolcott having discovered his genius during his residence at Truro. The chief of his productions is his 'Lyric Odes to the Royal Academicians:' his other poems are principally satires..

WOLDECK D'ARNEBOURG, J. G., a Prussian general of the seven years' war, 1712-1785.

troops out to meet him, and the battle was fought, which determined the ascendency of the Anglo-Saxon race and language over the French in the New World. Both Wolfe and Montcalm fell. Wolfe was twice struck as he led on a bayonet charge which decided the day; and when the French were already broken, he received a third bullet, which was fatal, in the heart. He lived just long enough to know that the victory was complete; and the last words of the young conqueror were—'Now, God be praised, I die happy.' Wolfe was as exemplary in private life, as he was eminent in the discharge of public duty, and his name is one of the purest as well as the brightest in the long list of England's military heroes. [E.S.C.]

WOLFERSDORF, Ch. Frederick Von, a Prussian general, born in Saxe Gotha, 1717-1781.

WOLFTER, P., a Germ. historian, 1758-1805.

WOLGMUTT, M., a Ger. painter, 1434-1519.

WOLKE, C. H., a native of Hanover, distinguished by his efforts, as a writer and founder, in the cause of education, 1741-1825.

WOLLASTON, William, an eminent moralist and theologian, who was educated for the church, but having ample means left him by a rich relation, devoted himself to literature. His principal work, and one which has been highly popular, is 'The Religion of Nature Delineated.' Born in Staffordshire 1659, died 1724.

WOLLASTON, William Hyde, M.D., born 6th August, 1766, at East Dereham, near Norwich, of which his father was clergyman; died 22d December, 1828, in London. Dr. Wollaston received a first-rate education, and having studied for the medical profession, settled first at Bury St. Edmunds. Afterwards, becoming a candidate for St. George's Hospital, London, and failing, he gave up the profession in disgust, and devoted himself to chemical pursuits. He examined with great care the crude platinum ore, discovering in it two new metals, palladium and rhodium, and improving the process for the manufacture of platinum, so as to enable him to realize a handsome fortune. In 1797 he described three new species of urinary calculi—the fusible calculus, the mulberry calculus, and the bone-earth calculus. He also first described cystic oxide, and urate of soda calculi, the latter formed in the joints of gouty persons. He was the inventor of the periscopic camera, and of numerous ingenious optical and chemical apparatus. To him chemistry is indebted for the methods at present employed for the estimation of ammonia, potash, and magnesia. Dr. Wollaston was a man of retiring habits, but by those who knew him intimately he was held in high regard. He has been accused of a penurious disposition. The fact that he presented his brother with £10,000 when asked to apply to the ministry in his behalf, seems to afford opposite evidence of the most substantial and overwhelming description. [R.D.T.]

WOLLE, C., a German Orientalist, 1700-1761.

WOLMAR, M., a Swiss jurist, 1497-1561.

WOLSEY, Thomas, so well known in history as Cardinal Wolsey, is generally said to have been born at Ipswich, in the year 1471. His parents were so obscure, that whether or not his father followed the occupation of a butcher, attributed to him by the cardinal's enemies, has not been ascertained. However it may have been achieved, young Wolsey obtained an excellent education, and he had a brilliant student-reputation at Magdalen College, Oxford. He never was an ascetic. Though he must have worked hard during his college career, he seems to have had his full share of the dissipation of the day, and it is known that for some pecadillo he was on one occasion subjected to the penal discipline of the stocks. His first preferment, after he had taken orders, was that of Symington in Somersetshire, believed to have been obtained through the marquis of Dorset, whose sons he instructed. The turning point in his career appears to have been his appointment as one of the chaplains of Henry VII. This introduced his abilities to the royal notice, and on his successful accomplishment of a delicate diplomatic mission to Flanders he obtained the rich deanery of Lincoln in 1508. It is not easy precisely to determine the source of the extraordinary influence which he exercised over Henry VIII. in the early years of his reign. He is said by his able scholarship to have aided in the composition of the celebrated *Assertio Septem Sacramentorum*, against Luther; but he was a favourite before he had an opportunity of performing this service. He was placed in the influential office of the king's almoner, through the recommendation of Fox, the bishop of Winchester; and that calculating prelate is said to have advanced Wolsey for the purpose of counteracting his rival Surrey. When once the impetuous Henry had learned to seek counsel of Wolsey, it is easy to believe that his magnificent notions, his scholarship, his knowledge of life, and his accommodating morality, would please such a monarch. Preferment flowed in upon him. In 1514 he was made bishop of Lincoln. He was then in possession of lucrative livings both in England and France. In 1515 he was made cardinal, and next year legate *a latere*, a commission which made him virtually the pope in England, giving him an authority which, if more limited in extent than that claimed by the bishop of Rome, was the more powerful, since it was exercised close at hand, and by one who knew the circumstances of the clergy over whom he ruled. Almost at the same time with these preferments he received the high ministerial and judicial office of lord chancellor. With his cardinalate he received the honour of the hat, usually conferred only on members of royal families. He held the bishopric of Tournay in France, and many other lucrative preferments in different parts of Europe. The vast influence which he exercised at the powerful court of England made his friendship an object not only to private seekers of preferment, but to the principal European powers. He aspired to the popedom at the time when Charles V. and Francis the First were competing with each other to succeed Maximilian as emperor of Germany. Hence each of them sought to secure the aid of Wolsey, by outbidding his rival in prospects of assistance towards the cardinal's great object, while he on his part had the too difficult task of making up his mind where to throw his influence, and of acting for one party with as little prejudice as possible to his influence with the other. He lost, much to his mortification, the great object which would have given him a securer foundation for power than he had in England, and

cal engraver almost on a par with his name in landscape. He was appointed engraver to George III.; and died in London, May 23, 1785. Woollett is great for his colour, and his skill in representing variety of texture, also for an extraordinary force in his prints, owing to the judicious combination of the three methods, with aquafortis, with the graver, and with the dry point. His works after Wilson constitute in themselves a delightful landscape gallery, all unsurpassed as pictures or as prints. [R.N.W.]

WOOLSTON, THOMAS, a deistical writer, who was originally a minister of the Church of England, and wrote an 'Apology for the Christian Religion;' at a later period, he was prosecuted for his 'Six Discourses on Miracles,' and his 'Defence' of the discourses. Born at Northampton, 1669, d. 1732.

WOOLTON, JOHN, bishop of Exeter, known as a theological writer, 1535-1594.

WORDSWORTH, WILLIAM, was born at Cockermouth in Cumberland, on the 7th of April, 1770. His father was an attorney there, and he was the second of five children. Dorothy, the only daughter, was his most cherished friend and confidant during his life. The mother of the family died in William's ninth year; and the father died five years afterwards, leaving to his children little fortune beyond a claim for lawagency on Sir James Lowther, afterwards earl of Lonsdale. This debt remained unsatisfied till 1802, when, on the accession of the next earl, £8,500 was paid in satisfaction of it.—In 1787, after having been educated chiefly at the endowed school of Hawkshead, near Esthwaite Lake, William was sent by his uncles to St. John's College, Cambridge. He had read much in boyhood, especially poetry, and had written English verses, in imitation (as he says himself) of Pope's versification, 'and a little in his style.' One of these compositions presaged two of the most prominent features in the character of his mind. It was, says he, 'a long poem, running upon my own adventures, and the scenery of the country in which I was brought up.' The only considerable poem which he wrote while at the niversity, was 'The Evening Walk.' His vacaons were devoted to wanderings in the country; in the autumn of 1790 he spent nearly three hs in a tour on the continent, visiting France, zerland, some of the Italian lakes, and the e. He disliked the system of the university, ttended little to the studies of the place. d, it is to be observed that, through life, sworth was as little of a student as any y man ever was. Except in poetical literais knowledge of books seems to have always ery slight. And if he was disinclined to e was quite as much disinclined to writing: weak eyes, and great indolence. In his years, he composed most frequently in the f his walks, without setting down a word; y of his poems would certainly have been not the ladies of his family been at hand them. He has himself said, that, if he free to choose his course of life, he would nt his days in travelling. To the adoption ssion he was never able to make up his The church was proposed to him, but jected. His religious belief never was o prevent his taking orders; but his opinions on the state of society, during his early manhood, would not easily have been reconcileable with the position of a clergyman in the Church of England. For several years after the outbreak of the French revolution, he was an ardent republican. In 1791 he took his degree of B.A., and quitted Cambridge.—In the close of the same year he went to France, where he spent nearly twelve months; and there he wrote the poem called 'Descriptive Sketches,' which betrays, yet more than 'The Evening Walk,' the poetic strength with which he was endowed. These pieces were published in 1793. In that year, also, 'The Female Vagrant' was written. For some years he wandered about, gradually satisfying himself that he was justified in regarding poetry as his true vocation. He planned a monthly miscellany, which was to have been 'republican but not revolutionary;' and he attempted to find employment in writing for the London newspapers on the opposition side. In 1795 he received a legacy of £900 from his friend and contemporary, Raisley Calvert. This generous and seasonable bequest fully answered the intention of the donor: it enabled the poet to devote himself to study till the settlement of his father's affairs.—In the autumn of 1795 Wordsworth began to live with his sister, their first residence being at Racedown in Dorsetshire. He commenced, but abandoned, a poetical imitation of Juvenal; and in this year and the following, he made his first and last attempt in a kind of poetry very uncongenial to the cast of his genius, by writing the Tragedy of 'The Borderers,' Refused at Covent Garden, this piece remained in manuscript for nearly half a century.—About this time, likewise, were written a good many of the earliest of those fine passages, which were afterwards dovetailed into 'The Excursion.' This is a fact particularly deserving attention. The poet's blank-verse compositions, with their solemn tone of meditation, their purely dignified diction, and their sweep of rotund melody, were made known to the world only when he had passed middle age; and they were treated by his critics as the fruits of improved skill and enlarged experience and purified taste. But he actually had at his command, and was continually expressing, this his highest mood of poetry, from his twenty-fifth year. Coleridge, with whom Wordsworth made acquaintance while in Dorsetshire, always insisted that his friend's first business ought to be, the completion of the Philosophical and Autobiographical Poem, of which these fragments were designed as parts. But Wordsworth was never at all disposed to pay deference to the opinion either of affectionate friends or of hostile critics. With him, as with most of us, 'the boy was father of the man.' He had always been quietly self-willed; and his character in manhood possessed the feature which he attributes to his early boyhood when he says:—'Possibly from some want of judgment in punishments inflicted, I had become perverse and obstinate in defying chastisement, and rather proud of it than otherwise.' At this time, indeed, as it has been remarked by his nephew, the whole tenor of his opinions led him to dissatisfaction with things existing; and his political creed (perhaps in part through the shock which events on the continent were beginning to give to it) affected his creed in literature. He perceived, with great

clearness, two or three deep-rooted faults in the recent poets of England: the artificial stamp of their diction; their general inattention to external nature; their want of sympathy with ordinary events and with the feelings of mankind at large. He felt that he possessed the power of producing poetry, in which these faults should be avoided. But, in the meantime, tempted partly by deliberate error in theory, partly by incidental eccentricities of taste and judgment natural to a self-trained and uncommunicative muser, he rebelled, not only against the false canons of literature, but against several that are really true. In the poems with which he chose to make his first effort towards the reformation of the public taste, there are many points of thought, of sentiment, and of expression, which, as the most judicious of his admirers allow, would not have appeared if those poems had been written even a few years afterwards. Some things, indeed, especially the oddest and boldest of the colloquial words and idioms, were silently altered in the later editions. But the eccentricity of judgment lingered, in a great degree, to the last, fostered by the self-brooding solitude to which he devoted himself.—The 'Lyrical Ballads,' to which chiefly these observations are applicable, made rapid progress in Wordsworth's next place of abode. This was Nether-Stowey in Somersetshire, where he lived for a year, removing to the place in August, 1797, in order to be near Coleridge. In the next year he wrote 'Peter Bell;' and in autumn he published, in one volume, the twenty poems which (with three by Coleridge) make up the first edition of the 'Lyrical Ballads.' The poet was now in his twenty-ninth year. Immediately afterwards he went to Germany with his sister and Coleridge; and, the party separating, Miss Wordsworth and her brother spent the winter of 1798-99, very uncomfortably, and seemingly with little advantage of any kind, at Goslar in Hanover. Here were written several beautiful pieces, among which were 'Lucy Gray,' and the fragments of blank-verse beginning 'There was a Boy' and 'Wisdom and Spirit of the Universe.' A beginning was also made with that first part of the great Poem, which Wordsworth's friends entitled 'The Prelude.'—Wordsworth's long residence among the lakes of his native district began soon after his return to England. In the end of 1799 he settled with his sister in a small house at Grasmere, which he continued to occupy for eight years. In 1800 were written 'The Brothers,' 'The Pet Lamb,' 'Ruth,' 'Michael,' and 'Hart-Leap Well;' and, in the close of the year these and other poems made up a second volume of the 'Lyrical Ballads,' which appeared with a reprint of the first. To 1802 belong, among other pieces, 'The Rainbow,' 'The Leech-gatherer,' 'Alice Fell,' 'Intimations of Immortality,' and the two Sonnets on Buonaparte. Then, also, Wordsworth was working on 'The Excursion,' which at that time bore the name of 'The Pedlar.' In that year, he married Mary Hutchinson of Penrith, to whose amiability his poems pay warm and beautiful tributes. In 1803 he made a tour of some weeks in Scotland, being guided at Melrose by Walter Scott; and he now became acquainted with Sir George Beaumont, whose name appears often in his writings. In 1805 he suffered the grief of losing his brother, Captain Wordsworth, who perished by shipwreck. In this year were written 'The Waggoner' and the 'Ode to Duty;' and 'The Prelude' was finished, and consigned to the poet's desk for forty-five years. In 1807 were printed two volumes of poems, composed since 1800. They contain, besides several very fine ballads, and many other small poems, the 'Sonnets Dedicated to Liberty,' and the 'Memorials of a Tour in Scotland.' These volumes were the objects of some of those critical censures, (severe but very far from being groundless,) under which, with all his outward apathy and real self-esteem, the poet, as his letters show, smarted very severely.—In 1808 he removed to Allan Bank at the head of Grasmere Lake, where he lived for three years. In 1809 he contributed to the 'Friend' of Coleridge, who was then living with him; and published his indignant and very eloquent pamphlet on the Convention of Cintra. His political opinions had now settled pretty much into the form they ever afterwards held, a kind of speculative Toryism, heightened by his church opinions, but balanced by many notions really democratic. In 1810 he

[Rydal Mount.]

printed, as an introduction to a set of Views of the district, his Observations on the Scenery of the Lakes, the most interesting of all things of the sort. In this year was born the last of his five children, two of whom died two years afterwards.—In the spring of 1813, after one temporary change of dwelling, he took up his abode at Rydal Mount, two miles from Grasmere, which was his home for thirty-seven years, and the scene of his death. Then, too, by the interest of Lord Lonsdale, he was appointed distributor of stamps for Westmoreland; an office which was executed by a clerk, and yielded about £500 a-year.—A second tour in Scotland, early in 1814, gave birth to a few poems; and in summer was published 'The Excursion,' the greatest part of which had been written at Allan Bank. This edition, consisting of five hundred copies, was not exhausted for six years. 'Let the age,' wrote the poet to Southey, 'continue to love its darkness; I shall continue to write, with, I trust, the light of Heaven upon me.' In the design of this remarkable poem, it is difficult to discover anything that can justify commendation, whether we look to it as an independent work, or regard it as forming a part in that gigantic poem, which the author so long contemplated executing in whole

But if 'The Excursion' is to be judged by its best passages, hardly any poem in our language is equal to it. Some of its scenes, extending through hundreds of lines; many passages of smaller extent, but yet considerable; and innumerable verses, and phrases, and words; are among the most exquisite things to which any poetic mind ever gave expression.—In 1815 appeared 'The White Doe of Rylstone,' a work instinct with a dreamy loveliness, and estimated by its author very highly. But it evinces, more plainly than any of his preceding works, his incapacity to plan or conduct a sustained narrative; and it is characterized, even more than the 'Lyrical Ballads,' by that which Coleridge had publicly pronounced to be one of his friend's besetting sins; namely, the prevalence of 'an intensity of feeling disproportionate to such knowledge and value of the objects described, as can be fairly anticipated of men in general, even of the most cultivated classes.'—Within a year or two before and after the publication of this work, the poet, in his usual fashion, proved his power of poetizing in a very different key, by composing several of those small pieces, whose elaborate refinement, both of sentiment and of diction, has drawn forth the lively admiration of readers the most adverse to the peculiarities of his system. Such were 'Laodamia,' 'Dion,' the 'Ode to Lycoris,' and 'Artegal and Elidure.' In 1816 was composed the 'Thanksgiving Ode,' and a rhymed translation of Three Books of the Æneid. In 1819 appeared 'Peter Bell,' which was rather popular, and the 'Waggoner,' which was much the reverse. To that year belong the series of Sonnets on the River Duddon. In 1820 Wordsworth, with his wife and sister, made a tour of four months on the continent, of which 'Memorials' were published some time afterwards. In that year, too, a visit to Sir George Beaumont gave occasion to the very fine series of Sonnets called 'Ecclesiastical Sketches.' —Wordsworth was now fifty years old, had written all his best works, and had laid most of them before the world. But, though the thirty years during which his life was still prolonged were unprolific of great performances, they witnessed very extraordinary changes in the reputation of the author. Poets were already familiar with his works, and acknowledged him as the chief in a new development of the art; but ordinary readers, taking what they found of him in the periodicals, knew as yet only a few of his best passages and a great many of his worst. The Edinburgh Review, supported afterwards by the Quarterly, had hitherto guided the public opinion as to his writings; a turn was now given to the tide, by the eloquently vehement panegyrics which began to be showered on him in Blackwood's Magazine, about the year 1820. Without taking account of minor points, we may correctly consider Wordsworth's principal critics as looking at the functions and duties of poetry from two opposite points of view. Jeffrey paid regard mainly to the perfection or imperfection of the result; Wilson and his friends were content with examining the state of mind out of which the result is generated. The former, severely pure in taste, demanded an elaborate work of art, symmetrically designed, and executed with care and dignity; the latter sought for nothing beyond such proof of genius as might be furnished in a few striking passages, and held native endowment as more than sufficient to atone for imperfect execution. Scrutinized in the first of these aspects, all the brilliant poetry which arose in England during the first generation of our century was seriously defective, and that of Wordsworth, with all his deliberation and slowness of performance, was, through the natural character of his mind, still more open to exception than the effusions of Scott and Byron had been made by carelessness and haste. Even those who, having formed a competent acquaintance with Wordsworth's works, felt themselves compelled to adopt this view, could not be, and were not, blind to the admirable beauties of detail, which, when blazoned forth by the pen of Christopher North, speedily made the poet's name to be a word of honour, even with those who knew none of his poems but in fragments, or who were wearied or repelled by the inanimateness and the disproportionate design of 'The Excursion.' The fame of the Poet of the Lakes grew yet wider, when his influence had shown itself decisively in that new school of poetry, which had its beginnings with Keats and Shelley. For a good many years before his death, Wordsworth was not only acknowledged, and justly, to be really the greatest English poet of his time, but was regarded with a reverence allowing no possibility of faults. Symptoms of a wiser and more discriminating judgment have shown themselves of late; and, in no long time, the world will estimate justly and correctly the works of one of the greatest, as well as purest and most blameless, of the poets who have enriched and enlarged the domain of English literature.—The period extending from Wordsworth's fiftieth year to his eightieth requires no minute notice. He lived among his beloved mountains, travelled much, suffered a good deal, and wrote little. Two visits to Scotland, in the former of which (in 1831) he saw Scott just before he left Abbotsford for the last time, provided many of the materials for a volume, published in 1835, 'Yarrow Revisited, and other poems.' The finest of these are the meditative pieces entitled 'Evening Voluntaries.' About this time the poet was deeply affected by political events; and he felt yet more keenly the declining health of his sister, who became a confirmed invalid. In 1837 he made, for nearly six months, a tour in Italy, which suggested several pieces, printed, in 1842, in a volume called 'Poems, chiefly of Early and Late Years.' In it was inserted the Tragedy of 'The Borderers.' In that year, being now seventy-two years of age, he resigned his distributorship in favour of one of his two sons, and received from Sir Robert Peel a pension of three hundred a-year. In 1843, on the death of Southey, the same ministry appointed Wordsworth to be Poet-Laureate; an office which he accepted only on the assurance, that it was to be entirely nominal and honorary. In 1847 he had to witness the death of his accomplished daughter, Mrs. Quillinan. He died on the 23d of April, 1850, being exactly the day of the month which closed the life of Shakspeare. His remains rest in the churchyard of Grasmere. [W.S.]

WORGAN, J. D., an English poet, 1790-1819.

WORLIDGE, T., a portrait painter and engraver of etchings after Rembrandt, 1700-1766.

WORM, Olaus, in Latin *Wormius*, a Dutch physician and antiquarian, 1588-1654.

WORONZOW, M. LARIONOWITZ, Count De, a Russian statesman and favourite of the empress Elizabeth, disgraced under Catharine, 1710-1767.

WORSDALE, JAMES, a dramatic writer and painter, taught by Sir G. Kneller, died 1767

WORSLEY, SIR RICHARD, the historian of the Isle of Wight, was born there in 1751. He became governor of the island, comptroller of the royal household, and member for Newport. In addition to his historical work, he published a magnificent catalogue of his marbles and other antiques, under the title of 'Musæum Worsleianum.' Died 1805.

WORTHINGTON, JOHN, rector of Ingoldsby in Lincolnshire, author of religious works, &c., 'The Doctrine of the Resurrection,' 1618-1671.

WORTHINGTON, THOMAS, a Roman Catholic theologian, died in exile about 1626.

WORTHINGTON, WILLIAM, vicar of Llarrhayader in Denbighshire, and a dignitary of the church, was born in Merionethshire 1703, and educated at Oxford. Died 1778. His principal works are an 'Essay on the Scheme of Redemption,' 'The Scripture Theory of the Earth,' 'On the Historical Sense of the Mosaic Account of the Fall,' and an 'Inquiry into the Case of the Gospel Demoniacs.'

WOTTON, EDWARD, a physician and naturalist, time of Henry VIII., 1492-1555.

WOTTON, SIR HENRY, a well-known statesman, diplomatist, and political writer, born in Kent 1568, died 1639. He went as an ambassador to Venice, the United Provinces, and several of the German courts in the reign of James I. His works are 'The States of Christendom,' 'Parallels between Essex and Buckingham,' 'Elements of Architecture,' 'Characters of the Kings of England,' and Poems, &c.

WOTTON, WILLIAM, a clergyman of the Church of England, remarkable for his precocious knowledge of the sciences and Oriental languages, author of 'Reflections upon Ancient and Modern Learning,' a 'History of Rome, from the Death of Antoninus Pius to the Death of Alexander Severus,' 'Memoirs of the Cathedrals of St. David's and Llandaff,' and other works of less note. Born at Wrentham in Suffolk 1666, died 1726.

WOUTERS, F., a Flemish painter, 1614-1659.

WOUVERMAN, PHILIP, was born at Haarlem in 1620, where he died in 1668, aged only forty-eight. Though one of the most masterly of painters, he is said to have been disappointed. His works became very valuable soon after his death, and have increased in value since, but according to D'Argenville, who rather contradicts Houbraken, he was so supremely disgusted with the encouragement he received, that shortly before his death he burnt all his drawings and studies, in case they should encourage his son to follow the profession of a painter: he seems to have worked chiefly to have enriched the dealers even during his own lifetime. Wouverman's subjects are generally road-side, travelling, hunting, fighting, or plundering scenes, and such as admit of horses, which he constantly introduced in his pictures; it is a common belief that he never painted a picture without a white or a gray horse, but this is doubtless an exaggeration. He painted horses in small with unrivalled skill; indeed, his mastery in every department of painting is perfectly extraordinary, and his colouring is always rich and transparent. All the works, however, attributed to Philip Wouverman, are not his; many were doubtless the productions of his brother, PETER WOUVERMAN, who survived Philip many years; a second brother, JOHN, was a good landscape painter.—(Houbraken, *Groote Schouburgh*, &c.) [R.N.W.]

WRANGEL, HERMANN, a Swedish general, rewarded with a marshal's baton by Gustavus Adolphus, 1587-1644. His son, CHARLES GUSTAVUS, greatly distinguished in the German war and in the councils of his sovereign, 1613-1676.

WRAXALL, SIR N. W., an indefatigable traveller and historical writer in the civil service of the East India Company, 1751-1831.

WRAY, D., an archæologist, 1701-1783.

WREDE, CHARLES PHILIP, Prince, a Bavarian officer and statesman, who served as the ally of Napoleon from 1805 to 1813, and in the two following years joined the coalition, 1767-1839.

WREN, SIR CHRISTOPHER, was born at East Knoyle, Wilts, October 20, 1632; his father was rector of the parish. He was educated at Westminster school, and showed great mechanical ability at a very early age. In 1646 he went to Oxford, and entered as a gentleman commoner at Wadham College; he took his bachelor's degree in 1650, became a fellow of All Souls, and a master of arts in 1653; and in 1657, then only in his twenty-fifth year, was chosen professor of astronomy in Gresham College, London, and in 1661, Savilian professor of astronomy at Oxford, when he also took his degree of doctor of civil law. In the following year he was the chief mover in procuring the foundation of the Royal Society, which had already existed some few years as the Philosophical Club, and he became its president in 1680. Such were the preliminary studies of England's greatest architect, but he had already commenced his great career in 1661 as assistant to Sir John Denham, the surveyor of the royal works, who was himself incapable of the duties of the office. Wren's first work in this capacity was a new hall for the public meetings of the university, a commission intrusted to him by Archbishop Sheldon, the chancellor of the university, since celebrated as the Sheldonian Theatre; it was completed in 1668. About the same time he built a new chapel for Pembroke College, Cambridge, for his uncle the bishop of Ely. In 1665 he visited Paris. In 1669 he succeeded Sir John Denham as surveyor of the royal works, with a salary of £100 per annum, and as surveyor-general of the repairs of St. Paul's. In 1672 he submitted plans for a new church instead of attempting to repair the old one, which had been completely destroyed by the fire; a commission was appointed for the execution of the work in 1673, and Wren having given up his professorship at Oxford, was appointed architect of the cathedral, and was knighted by the king on the occasion. This great work, in style the Italian renaissance, occupied nearly forty years; it was completed in 1710, Wren receiving only £200 a-year as architect of St. Paul's, but he executed many other churches and public buildings in London at the same time, as 'The Monument,' Temple Bar, &c., besides some others in the country, Oxford, and Cambridge, Winchester, Greenwich, Hampton Court, &c. Of all his great works, the

towers of Westminster Abbey are alone discreditable; he was, however, not very successful in his palaces, as for instance, the additions to Hampton Court, and Marlborough House, in both of which the apartments are of mean proportions, contrasting strongly even with the hunting boxes of many German princes. The cartoon gallery at Hampton Court is deplorably ill suited to its purpose. Sir Christopher never visited Italy; his mastery of the Italian renaissance he owes probably mainly to the example of Inigo Jones; he has in St. Paul's achieved something more than a worthy rival of St. Peter's; though on so much smaller a scale, it has internally through its so far more judicious proportions even a vaster effect than St. Peter's at Rome; the interior, however, is painfully cold, but this is no fault of Wren's, it is the general want of colour and other decoration. The original design was more like St. Peter's than that carried out. In 1684 Wren was appointed comptroller of the works at Windsor, and in 1685 he was returned to parliament as one of the members for Plympton; he sat also in following parliaments for Windsor and for Weymouth. In 1717, after the death of Anne, he lost the favour of the court, and was removed from his office of surveyor-general. He retired to Hampton Court, where he died February 25, 1723.—(*Parentalia*, 1750; Elmes, *Life of Wren*; Allan Cunningham, *Lives of the Painters*, &c.; *Penny Cyclopædia*.) [R.N.W.]

WREN, M., a learned prelate, 1585-1667.

WRIGHT, Abraham, an English theologian, 1611-1690. His son, James, an antiquarian and historian of Rutlandshire, 1644-1715.

WRIGHT, Edward, a mathematician, who is said to have discovered the true method of dividing the meridian line, about 1560-1615.

WRIGHT, Joseph, a painter of versatile ability, commonly called 'Wright of Derby,' and particularly skilled in landscapes, and scenes in which the effects of fire-light is introduced, 1734-1797.

WRIGHT, S., a nonconform. divine, 1683-1746.

WRIGHT, W., a Jesuit and theologian, d. 1639.

WRIGHT, W. R., president of the Court of Appeal at Malta, author of 'Horæ Ionicæ,' a work describing the Greek isles, died 1826.

WRISBERG, H. A., a Ger. anatom., 1739-1808.

WUCHERER, F., a Ger. theologian, 1682-1737.

WULFER, J., a Germ. Orientalist, 1651-1682.

WUNSCH, C. E., a Prussian astronomer, physician, and naturalist, born about 1730.

WUNSCH, J. J. De, a Prus. general, 1717-88.

WURMBRAND, John William, Count, an Austrian statesman and antiquarian, 1670-1756.

WURMSER, Dagobert Sigismond, Count, an Austrian general who distinguished himself in the wars with the French republic; born in Alsace 1724, died soon after he had been compelled to surrender Mantua 1797.

WURSTEISEN, C., a mathematician and historian of the city of Bale, 1544-1588.

WURTZ, F., a Swiss surgeon, 16th century.

WURTZ, G. C., a French physician, 1756-1823.

WURTZ, J. W., a Ger. controversialist, d. 1826.

WURTZ, Paul, Baron De, a general in the service of Sweden and the United Provinces, d. 1676.

WURTZBURG, Conrad De, one of the balladsingers of Germany, 13th century, author of the 'Nibelungen,' published 1757-1784.

WYATT, James, a metropolitan architect, builder of the Pantheon in Oxford-Street and of Fonthill Abbey, 1743-1813.

WYATT, R. J., a sculptor of considerable eminence, was born in London, 1795; and instructed in his art by Charles Rossi, of the Royal Academy. In 1821, he went to Rome, and continued to reside there till his death in 1850. He was an indefatigable worker, and produced some groups and statues which are much admired. The greatest of the latter is his 'Penelope,' which he was commissioned to execute for the queen in 1841, at which period he visited England.

WYATT, Sir Thomas, a courtier, statesman, and poet, who enjoyed the favour of Henry VIII., and was employed by him in several diplomatic missions; born at Allington castle, in Kent, 1503, died 1541. His poetical works, which consist of love elegies and odes, have been greatly admired, and were first published with those of Lord Surrey. He was twice tried for sedition, but acquitted.—His son, of the same name, was a zealous protestant, and was beheaded by Queen Mary in 1554.

WYCHERLEY, Wm., was the oldest of those Comic Dramatists, whose licentiousness throws on the period succeeding the Restoration a disgrace not to be wiped away by the brilliant cleverness of their works. Less witty than Congreve, less gay than Farquhar, and inferior to Vanbrugh as a painter of character, he has a vigour and good sense, and an ingenuity in the invention of lively incidents, not reached by any of these his contemporaries. He was the son of a Shropshire gentleman, and

[Birth-place of Wycherley.]

born about 1640. He was sent in his youth to France, where he learned the fashionable morality, and conformed to the fashionable religion by becoming a Roman Catholic. At the Restoration he was placed at Oxford, where he returned to the Church of England. The whole of his after life was that of an improvident and debauched man of pleasure. The dates at which his four comedies appeared range from 1669 to 1678; but the two earliest of them were, by his own account, written before he came of age, and the other two a considerable time before they were acted. 'The Plain Dealer,' a vigorous but unpleasing adaptation of Molière's 'Misanthrope,' was composed when he was twenty-five years old; and at thirty-two he wrote his lively and unprincipled comedy, 'The Country Wife.'

About 1680 he married a young widow, the countess of Drogheda, whose jealousy of her rakish husband made him uncomfortable, and whose bequest of her fortune to him served only to plunge him into lawsuits at her death. He lay for seven years in the Fleet prison for debt; and even after his release, which is said to have been procured by King James, he continued to be a needy man. When he was certainly above seventy years old, he married a young woman, being desirous, it is said, to disappoint a nephew whom he disliked. But he survived his marriage only eleven days, dying in December, 1715. [W.S.]

WYCK, THOMAS, called 'the Old,' a Dutch painter and engraver, 1616-1686.

WYCLIFFE, WICKLYFFE, or WICLIF, JOHN DE, was born at Wycliffe, near Richmond, in Yorkshire, about A.D. 1324. In early youth he was a commoner of Queen's College, Oxford, but soon removed to Merton, of which he became a fellow. His favourite studies were metaphysics and theology. One of his earliest public appearances was in 1360 against the mendicant monks, with whom the university had a resolute quarrel. In 1361 he became master of Baliol, and was presented to the rectory of Fillingham, in the diocese of Lincoln, which he afterwards exchanged for that of Ludgershall. Four years afterwards he was installed warden of Canterbury Hall, then recently founded by Archbishop Islep. In 1367, Langham, archbishop of Canterbury, expelled him from the wardenship, on which he appealed to the pope, Urban V., and a decision, after a delay of three years, was given against him. In 1372 he took his degree of D.D., and read lectures in divinity with great applause. He was sent soon afterwards as a commissioner to the papal embassy at Bruges, where he remained two years, and detected more narrowly the workings of the mystery of iniquity. On his return he was presented to the prebend of Aust, and the rectory of Lutterworth, through the patronage of the duke of Lancaster. Three hundred of his parochial sermons have been preserved. He had for some time been loud and bitter in his remonstrances against the idle and vicious clergy, and his vehemence and fidelity increased with his years. The enraged prelates summoned him before the convocation, but his powerful patrons saved him. In 1376 the monks drew up nineteen articles against him, taken from his prelections and sermons. These charges show that Wycliffe preached a species of protestantism —denying transubstantiation and the supremacy of the pope, and severely condemning the abuse of her temporalities on the part of the church. During the next year the pope sent to England five bulls against the reformer. But the king died before they arrived, and the universities would not act. The prelates, however, cited Wycliffe to appear before them in London. In the meantime parliament was in a dilemma on a question of casuistry, whether it were lawful to refuse the pope's demand that treasure should be sent out of the kingdom. The matter was referred to Wycliffe, and he at once decided that parliament might resist. He then, attended by the duke of Lancaster and the lord marshal, Earl Percy, appeared before the episcopal tribunal, and after some altercation, left the court in safety. He was summoned to appear again at Lambet 1378, but the process was suddenly stp by the queen-mother. In 1381 he publi twelve theses against transubstantiation, and archbishop of Canterbury formally pronounced majority of them dangerous and heretical. W liffe left Oxford in 1382, and retired to Le worth. There he laboured without intermis and neither tongue nor pen was idle in the c of evangelical truth and freedom. He had threatened with paralysis a year or two prev but in 1384 he was seized in the pulpit with a den stroke, and soon after expired. Wycl

[Wycliffe's chair.]

works are very numerous, and are chiefly of a p mical and practical nature, induced by the spir the age in which he lived. His English transla of the Latin Bible, or Vulgate, was a work of g merit and necessity, for it unlocked the Scriptur the multitude, or as his antagonist, bewailing a an enterprise, worded it, 'the gospel pearl cast abroad and trodden under foot.' The p schism that happened on the death of Greg XI., stirred him up to compose a famous tr 'The Schism of the Popes.' His essay on 'T Truth and Meaning of Scripture,' contains str ing statements on the perfection and clearness the Bible alone as the rule of faith. The Engl style of the reformer is wonderful for his age, a is clear and homely in its structure. Our prose tongue was then beginning to raise itself to eminence and popularity. Chaucer's poetry a Mandeville's prose were evidence of its flexibili and power. Wycliffe's style is more common than theirs, for it speaks to the people in their own vernacular. Wycliffe will ever be remem bered as a good and a great man, an advocate of ecclesiastical independence, an unquailing foe to popish tyranny, a translator of Scripture into our mother tongue, and an industrious instructor of the people in their own rude but ripening dialect. May he not be justly styled the 'morning star of the reformation?' So much impression was made by his works that one of his enemies complained— 'that a man could not meet two persons on the road but one was a Wickliffite.' A convocation held at Oxford in 1408 prohibited the reading and diffusion of the reformer's version. At the council of Constance in 1415, the dead Wycliffe was de nounced as a heretic, and his bones were ordered

to be exhumed from consecrated ground. Thirteen years afterward the decree was enforced by Pope Martin V., and Fleming, bishop of London, was ordered to see it done. His grave was opened, the bones taken out and burned, and the ashes cast into the stream that passes near the church of Lutterworth. As Thomas Fuller adds in his own style:—This river took them 'into the Avon, Avon into the Severn, Severn into the narrow seas—they into the main ocean, and thus the ashes of Wycliffe are the emblems of his doctrine which is now dispersed all the world over.' [J.E.]

WYDEVILLE. See WOODVILLE.

WYDRA, S., a Polish mathemat., 1741-1804.

WYERMANN, or WEYERMANN, J. CAMPO, a Dutch painter and writer, 1679-1747.

WYKEHAM, WILLIAM OF, bishop of Winchester, and lord high chancellor of England, was born at Wykeham in Hampshire 1324. He was promoted to his see after distinguishing himself in several state employments in 1366, and held the high office of chancellor, from 1367 to 1371. He promoted the formation of Winchester school and New College, Oxford. This eminent prelate died in 1404, and was buried in his own oratory in Winchester cathedral, where a costly monument is erected to his memory.

WYNANTS, JOHN, a Dutch landscape painter, the teacher of Philip Wouvermans, 1600-1670.

WYNANTZ, GODWIN, Count, a jurisconsult and statesman of the empire, 1661-1732.

WYNDHAM, H. P., an antiquarian writer and member of parliament for Wiltshire, 1736-1819.

WYNDHAM, SIR WILLIAM, an eloquent parliamentary speaker and statesman of the period of Queen Anne, was born at Orchard Wyndham in Somersetshire 1687, and entered parliament as knight of the shire for his native county. In 1710 he was made secretary at war, and in 1713 chancellor of the exchequer. On the death of the queen he became a distinguished member of the opposition, and in 1715 was committed on a charge of being implicated in the Scotch rebellion; died 1740. Having married a daughter of the duke of Somerset, his eldest son, SIR CHARLES WYNDHAM, inherited the title of earl of Egremont, from his uncle. He died in 1763.

WYNN, CHARLES WATKINS WILLIAMS, an experienced member of the House of Commons, having represented Montgomeryshire from 1797 to his death in 1850. He became secretary at war under Earl Grey from December, 1834, to April, 1835, but is chiefly memorable for the honourable constancy of his public and private conduct during this long career. He was a liberal supporter of the Welch school in London, and deserves to be named among the friends of literature.

WYNNE, EDWARD, author of 'Dialogues on the Laws and Constitution of England,' 1734-84.

WYNNE, JOHN HUDDLESTON, a native of Wales, who settled in London as an author, and wrote 'A History of the British Empire in America,' and 'A History of Ireland,' 1743-1788.

WYNTOUN, ANDREW, a Scottish rhyme-chronicler, prior of the monastery of St. Serf's Inch on Lochlomond, died about 1420.

WYON, WILLIAM, R.A., a distinguished English medallist, 1795-1851.

WYRWICZ, CHARLES, a Polish Jesuit, historian, and geographical writer, 1716-1793.

WYSS, the name of several Swiss writers:—BERNARD, author of a history of events from the time of Rodolph of Hapsburg, still in MS., about 1463-1525. NICHOLAS, a chronicler of events connected with the reformation, killed in the battle of Cappeler, 1531. HANS HENRY, author of a 'History of the Canton and City of Zurich,' published 1783. FELIX, professor of theology at Zurich, 1596-1666. GASPARD, brother of the latter, a Greek scholar, dates unknown.

WYTFLIET, CORNELIUS, a Flemish historian, and secretary to the senate of Brabant; date of his works 1598-1607.

WYTHE, GEORGE, an American statesman and champion of independence, 1726-1806.

WYTTENBACH, DANIEL, a learned scholar and critic, born in 1746 at Berne, and professor from 1771 at Amsterdam and Leyden. He published an edition of the moral works of Plutarch, Historical Selections from Ancient Authors, and other works. Died 1820.

WZABECZ, WENCESLAUS JOACHIM, professor of surgery at Prague, author of several practical works on surgery, 1740-1804.

X

XACCA, E., a Sicilian poet, born 1643.

XAINTONGE, ANNE and FRANCIS DE, sisters of Dijon, who each founded a religious house of the Ursuline order, the former 1567-1621; the latter died 1639.

XAINTRAILLES, JEAN POTON, Seigneur De, a commander in the army of Charles VII. at the period of the expulsion of the English, died 1461.

XANTHUS OF LYDIA, a Greek historian, some fragments of whose writings, published in the collections of Creuser and Muller, are all that remain, flourished in the 6th or 5th century B.C.

XANTIPPE, whose name has passed into a proverb for a scolding wife, was the spouse of Socrates the philosopher, and notwithstanding her ill temper was deeply attached to him. The date of her death is unknown.

XANTIPPUS, an Athenian general, 5th c. B.C.

XANTIPPUS, a Lacedæmonian general who defeated the Romans under Regulus, B.C. 255.

XAUPI, J., a French ecclesiastic, 1688-1778.

XAVIER. See FRANCIS.

XAVIER, JEROME, a Jesuit and missionary, of the same family as the saint, died 1617

XENOCLES, a Greek tragedian, 4th cent. B.C.

XENOCRATES, a Greek philosopher of the Platonic school, employed as a diplomatist by Philip, king of Macedon, and remarkable for his integrity, B.C. 400-314.

XENOCRATES, a Greek physician, 1st cent.

XENOPHANES, flourished between 540 and 500 B.C., an Ionian by birth; afterwards settled in Italy. From the few almost oracular verses of Xenophanes that have reached us, we may still form a tolerably adequate conception of the nature of that important place, in the History of Greek Philoso-

phy, which unquestionably belongs to him. Indifferent to the search of the Ionic School after a primal physical element; neither sympathizing with the higher aim of Pythagoras,—his mind was arrested by the direct question concerning the GODS. And his conclusions seem to have been as follows. Rejecting utterly the Gods of the Poets, and every modification of Anthropomorphism—he declared, because he *felt*, that something—being, reality—IS: but he denied that man can reach its nature, or ever apprehend its attributes. Man can learn or conceive only what is like himself, or what is placed before him by the senses. BEING, is not discernible by sense; neither can it be similar to Man. Essentially then it is incomprehensible, inscrutable, unknown, and unknowable. Xenophanes, was not afraid to ascertain that he could see nothing, in the awfulness which is beneath visible Life. But he was no sceptic—he believed that GOD IS.—These reverential and most pregnant thoughts, fill a large space in all subsequent Modern as well as Greek speculation. [J.P.N.]

XENOPHON, the Athenian historian and philosopher, was the son of Gryllus, a native of the Attic borough Ercheia. The time of his birth and death is not mentioned by any ancient writer, but it has been with very considerable probability inferred that he was born about B.C. 444; and Lucian states that he attained to above the age of ninety. He began life as a soldier, and was present at the battle of Delium (B.C. 424). In the flight which ensued he fell from his horse, and owed his safety to Socrates, on whose shoulders he was carried to a place of security. Having by this incident become known to the great philosopher of the age, he cherished for him ever after the warmest affection, and derived from him all his moral and philosophical principles. Nothing worthy of notice is known respecting him till B.C. 401, when, on the invitation of his friend Proxenus, he was induced to join the expedition of Cyrus the younger against his brother, Artaxerxes Mnemon, king of Persia. Before deciding, he asked the advice of Socrates, who recommended to him to consult the Delphian oracle; but Xenophon, who had previously determined to go, merely asked the oracle to what gods he should sacrifice in order to insure success; and, having performed the required rites, proceeded to Sardis, where he arrived in time to join the expedition. Attaching himself to the army, without any military appointment, he accompanied it in its tedious march, and was present at the battle of Cunaxa in which Cyrus fell. On the death of their leader the barbarian troops fled, and left the Greeks alone in the plains of Mesopotamia. Clearchus, whom they invited to take the command, and also others of the Greek generals were soon after massacred by the treachery of the Persian Satrap, Tissaphernes. In this emergency Xenophon came forward, and, with the consent of his countrymen, took a prominent part in conducting the famous 'Retreat,' of which he has left a minute and graphic account in the *Anabasis*. Not daring to attempt a return by the route by which they had advanced, they proceeded along the course of the Tigris, and across the high lands of Armenia to Trapezus (*Trebizond*), a Greek colony on the south-east coast of the Black Sea, and thence found their way to Chrysopolis, which is opposite to Byzantium (*Constantinople*). On their arrival here the Greeks were in great distress, and they therefore readily accepted the invitation of Seuthes, king of Thrace, to aid him in recovering the sovereignty. They performed their promise; but the Thracian chief declined to pay the stipulated reward, and it was with great difficulty that Xenophon got from him part of the sum agreed upon. Being still very poor, the Greeks next made an expedition into the plain of the Caicus; and seizing the house and property of a wealthy Persian, thereby replenished their empty pockets. Of this spoil Xenophon obtained his due share. In consequence of his connection with the expedition under Cyrus, Xenophon was banished from Athens about B.C. 399; and, as he remained in Asia, probably joined Agesilaus, king of Sparta, during his expedition into that country in B.C. 396. When Agesilaus was recalled, Xenophon accompanied him to Greece, and was with him in the battle against his countrymen at Coronea, B.C. 394. After the battle he returned with Agesilaus to Sparta, and soon after settled at Scillus, in Elis, not far from Olympia, on a spot presented to him by the Spartans, where he was joined by his wife and children. In this secluded retreat he spent his time in hunting, entertaining his friends, and writing the works which have immortalized his name. After a residence of more than twenty years, he was expelled from Scillus by the Eleans, and retired to Corinth, where he is believed to have died. The sentence of banishment against him had been previously recalled; but Xenophon never revisited his native city. The extant works of Xenophon may be divided into four classes:—1. Historical—the *Anabasis*, an account of the expedition of Cyrus the Younger, and the Retreat of the Ten Thousand, a model of perspicuous and interesting narrative; the *Hellenica*, or Grecian Histories, a continuation of the History of Thucydides as far as the battle of Mantineia (B.C. 362); the *Cyropaedia*, an historical or philosophical romance, founded on the real events of the early life of Cyrus; and the Life of *Agesilaus*. 2. Didactic—the *Hipparchicus*, a treatise on Horsemanship; and the *Cynegeticus*, a treatise on Hunting. 3. Political—two Treatises on the *Constitutions of Sparta and Athens*, and a Treatise on the *Revenues of Attica*. 4. Philosophical—the *Memorabilia of Socrates*, a faithful record of the doctrines and sayings of the philosopher; the *Apology of Socrates*, which professes to contain the substance of Socrates' address to his judges; the *Symposium*, an account of a festive meeting, at which Socrates was present; the *Œconomicus*, a discussion on the duties of domestic life; and the *Hiero*, an imaginary conversation between the tyrant of Syracuse and Simonides. It is impossible in our limited space to analyze the character of Xenophon as an historian, a politician, a philosopher, and a general. It is not detracting from pre-eminent merit to allege that his continuation of the History of Thucydides falls short of the original; that, in depth and philosophical acumen, he must yield to Plato, while he is a more faithful expounder of the doctrines of their common instructor; and that his conducting of the Retreat of the Ten Thousand presents many of the qualities of a great com-

mander. His style exhibits the Attic dialect in its purest and most perfect form; clear, simple, and devoid of ornament. [G.F.]

XERES, F., a Spanish historian of the conquest of Peru, where he accompanied Pizarro.

XERXES, king of Persia, was the son of Darius and of Atossa, daughter of Cyrus. He succeeded his father B.C. 485, to the prejudice of his elder brother, Artazabanes. Four years previously the forces of Darius had been defeated by the Greeks under Miltiades at the battle of Marathon, and the interval had been passed in preparing for a second expedition. These preparations Xerxes continued on a scale of magnificence, almost incredible, and in the spring of 480 B.C. he commenced his march from Sardis: his army was moved forward with great deliberation, and being numbered on its arrival in Europe was found to muster 1,700,000 foot, and 80,000 horse; besides camels, chariots, and ships of war. These numbers, and the undisciplined crowds who must have attended them, to supply their necessities, are perfectly bewildering to the imagination; and they become still more so when their varied costumes, the silken and gilded tents, the standards, the costly armour, and the variety of national weapons are considered. One of the political parties of Greece, it must be borne in mind, were in league with the Persian court, and the terror of the country verged upon despair of maintaining their liberties. Themistocles, however, while the pass of Thermopylæ was defended by Leonidas and his Spartans, succeeded in rallying his countrymen, and having created a navy, defeated Xerxes at the battle of Salamis. This great event took place in the year of the expedition B.C. 480. The Persians were allowed to retreat in such order as they could, but Mardonius, one of the principal commanders, reserved a more manageable army, the best he could pick from the flying host, and with these he was defeated by the combined Greeks the year following. Xerxes was assassinated by Artabanus, one of the great officers of his court, who aspired to found a new dynasty in Persia, B.C. 465. [E.R.]

XERXES, the *second* of the name, king of Persia, succeeded his father, Artaxerxes Longimanus, B.C. 424, and was assassinated 423.

XIMENES, AUGUSTIN MARIA, Marquis De, a French poet, and friend of Voltaire, 1726-1817.

XIMENES, F., a Spanish painter, 1598-1666.

XIMENES, FRANCIS, one of the Spanish missionaries who introduced Christianity into Mexico, an. of a description of Mexican zoology and botany.

XIMENES, FRANCIS, known in Spanish history as Cardinal Cisneros, from the territorial title of his family, was born at Torrelaguna in 1437. A great portion of his time was spent in obscurity and hard study. In 1492 he was made confessor to Queen Isabella, and in 1494 was made archbishop of Toledo. In 1507 he received the cardinal's hat. Along with his high dignities, he was possessed of vast revenues, but his influence arose from his discountenance of the luxurious and grasping habits of the higher priesthood, and his adopting the rigid discipline of the new order of St. Francis, with which he identified himself. He thus prepared the way for such internal reform as the Romish Church received. He was a great patron of letters, and by his exertions and expenditure produced the earliest edition of a polyglott Bible, known as the Complutension, from its publication at Complutum. The political career of Ximenes was a struggle for the establishment of the power of the crown above the nobles, and somewhat anticipated the policy of Richelieu in France. He died on 8th Nov., 1517. [J.H.B.]

XIMENES, J., a Spanish poet, 16th century.

XIMENES, J. A., a Spanish theolog., 1719-74.

XIMENES, LEO, a geometrician, astronomer, and engineer, of Sicilian birth, 1716-1786.

XIMENES, L., a French ascetic, 13th century.

XIMENES, RODERIC, archbishop of Toledo, and author of Spanish histories, died 1247.

XIMENO, V., an Italian biographer, 17th cent.

XUARES, GASPARD, born in a district of Paraguay, distinguished as a naturalist, 1731-1804.

XUARES, or SUARES, RODERIC, a Spanish jurisconsult, time of Ferdinand and Isabella.

XYLANDER, the Græcised name of WILLIAM HOLTZEMANN, a Germ. philologist, born at Augsburgh 1532, d. professor at Heidelberg, 1576. He translated the works of Plutarch and Tryphiodorus.

XYPHILIN, JOHN, a patriarch of Constantinople, sprung from a noble family of Trebizond, and famed for his virtues and great learning, died 1078, after a patriarchate of twelve years. His nephew, of the same name, author of an abridgment of Dion Cassius, first published in 1551.

XYSTUS. See SIXTUS.

Y

YAHIA AL BARMEKI, ABOU ALI, an Arabian vizier of the Barmecide family, who played a conspicuous part in the reign of Haroun al Raschid, and was put to death in 803.

YAKOUT, SCHEAB EDDYN ABDALLAH, an Arabian biographical writer and geographer, of Greek origin and birth, 1179-1229.

YALDEN, or YOULDING, THOMAS, successor of Atterbury as preacher at Bridewell hospital, known to fame as a poet and miscellaneous writer, 1671-1736. The best known of his productions is his 'Ode to Saint Cecilia's Day.'

YANEZ DE LA BARBUDA, a Portuguese commander, who attempted the conquest of Grenada, and perished in the field, 1374.

YANEZ, F., a Spanish painter, died 1560.

YART, A., a French poet, 1710-1791.

YATES, FREDERICK HENRY, a popular English actor, and manager of the Adelphi theatre, was born in 1797, and made his first appearance on the stage in 1817. His abilities were extremely versatile, ranging from the exhibition of the deepest pathos to the humour of broad farce; died 1842.

YATES, RICHARD, a comic actor, who kept the stage several years in such characters as 'Fondlewife' in the 'Old Bachelor;' died 1796. His wife, ANNA MARIA, a tragic actress, died 1787.

YDELEZ, STEPHEN, a priest of Franche-Comté, who devoted himself to the service of the sick poor, and wrote on the plague, 1581.

YEARSLEY, Anne, known as a poetical and dramatic writer, was originally a milk-woman, and was born at Bristol about 1756. She was encouraged to publish by Hannah More, and the profits of her works enabled her to engage in a more congenial occupation as mistress of a circulating library; died 1806.

YEATES, Thomas, an Oriental scholar, whose literary labours were devoted to the Bible as a translator and editor, 1768-1839.

YEATS, T. P., an entomologist, died 1782.

YEBRA, M. De, a Spanish ascetic, 16th cent.

YELVERTON, Sir Henry, an English judge, author of 'Reports of Special Cases,' 1566-1630.

YEPEZ, Antonia D', a Spanish Benedictine and historian of his order, died 1621.

YEPEZ, Diego D', bishop of Tarragona, and a learned historian, 1559-1613.

YEREGUI, Jose De, a pious and learned ecclesiastic of Guyapuscoa, 1734-1805.

YGLESIAS, J. De, a Spanish poet, 1753-1791.

YMBISE, or IMBESE, Jean D', a magistrate of Ghent, who endeavoured to free his country from the Spanish yoke, and was executed 1584.

YON, St., in Latin *Ionius* or *Œonius*, a martyr of Christianity in France, 290.

YORK, the house of, rival to that of Lancaster, and possessor of an elder right to the crown, derived its claim from Richard, son to the duke of Clarence, who was the second son of Edward III. The line of Lancaster claimed from John of Gaunt, his third son. Richard, duke of York, succeeded the duke of Bedford as regent in France, during the minority of Henry VI. His claim to the crown was first asserted about 1450, after the rebellion of Cade, and he first took arms in defence of it by raising an army of 10,000 men in 1452. Thus began the wars of the red and white roses, which deluged England with blood. The duke was defeated at the battle of Wakefield, by Queen Margaret, and killed in the action, 24th December, 1460. It is questionable whether his son, Clifford, was murdered as generally understood. The last chief of the white rose was his son, Richard III. [E.R.]

YORK, Frederick, duke of, commander of the British army in the Low Countries at the period of the French revolution, was the second son of George III., and was born August 16, 1763. He studied military tactics at Berlin; and in 1791 married the eldest daughter of the king of Prussia. He died, involved in debt, occasioned by his passion for gaming, on January 5, 1827. A vindication of his command in Flanders has been recently published by his military secretary.

YORKE, Sir Joseph Sidney, an admiral and member of parliament, perished in Stoke's Bay on returning from Spithead with all his ship's company, 1831.

YORKE, Philip, first earl of Hardwicke, was born at Dover in 1690, and educated for the law. He was appointed chief justice of the King's Bench, and raised to the peerage in 1733. From 1736 to 1756 he held the office of lord chancellor, and retired with the duke of Newcastle; died 1764.

YORKE, Philip, second earl of Hardwicke, son of the preceding, was born in 1720. In 1738 he was appointed one of the tellers of the exchequer, and, in 1764, succeeded his father in the earldom. His distinction is that of a man of letters. He was joined by his brother, the Hon. Charles Yorke, in publishing the 'Athenian Letters, or the Epistolary Correspondence of an Agent of the King of Persia, residing at Athens during the Peloponnesian War.' His other works are 'The Correspondence of Sir Dudley Carleton,' and 'Miscellaneous State Papers.' Died 1790.

YORKE, Philip, third earl of Hardwicke, eldest son of Charles Yorke, was born in 1757. He held several public offices, and from 1801 to 1805 was lord-lieutenant of Ireland. Died 1834.

YORKE, Philip, of the same family as the preceding, known as a genealogist and historian, was born about 1743, and died, after a life of literary leisure, in 1804. His work on 'The Royal Tribes of Wales,' contains much curious and authentic matter.

YOUNG, Sir Aretas William, a peninsular officer, who was successively protector of slaves in Demerara 1826, and lieut.-governor of Prince Edward's Island, 1831. Died 1835.

YOUNG, Arthur, a native of Norfolk, who became rector of Bradfield in Suffolk, and prebend of Canterbury. He wrote 'An Historical Dissertation on Idolatrous Corruptions in Religion.' Died 1759. His son, of the same name, born at his father's rectory in 1741, is well known as an agricultural writer and rural economist, and was secretary to the Board of Agriculture. Died 1820.

YOUNG, Edward, was born at his father's parsonage, near Winchester, in 1684. From 1708 he held a fellowship at Oxford. In 1710 part of his poem, 'The Last Day,' was inserted in the Tatler; and the whole was published in 1713. For many years from the latter of these dates, he continued to produce poems of various kinds. The most successful, and by much the best of them, till the appearance of his last and most popular work, were his Satires, which, appearing in separate pieces, were collected in 1728, under the name of 'The Love of Fame, the Universal Passion.' His tragedy of 'Busiris' was acted successfully in 1719; 'The Revenge,' the only one of his tragedies that is now ever acted, appeared in 1721; and the 'Brothers,' while in rehearsal, in 1727, was withdrawn by the author, who, after having long hesitated between professions, had just taken orders. In 1730 his college presented him to the rectory of Welwyn, in Hertfordshire, valued at three hundred a-year; and this was the highest preferment he ever obtained, notwithstanding very frequent solicitations, which were continued when he was very old. In 1731 he married a widow, the daughter of the earl of Lichfield. Lady Elizabeth Young died in 1741; and her husband is supposed to have begun, soon afterwards, the composition of the 'Night Thoughts.' The publication of the poem, taking place in sections, was completed in 1746. With its want both of individual interest, and of genuine poetic imagination, this work could not have gained the permanent celebrity it has, were it not for the rarity of good religious poetry, and the readiness with which serious persons welcome any work of the sort. In its antithetical turn, and its perpetual ingenuity of strained analogies, not unrelieved by snatches of fine fancy, it reminds us of the metaphysical poetry of the seventeenth century. But the appearance of a work, so solemn

and elevated in tone, at a time like that in which the 'Night Thoughts' came forth, was really a fact hardly less encouraging for the prospects of literature, than was the appearance of the exquisite 'Seasons' of Thomson a few years earlier. Young survived till 1765. [W.S.]

YOUNG, MATTHEW, an Irish prelate and mathematician, author of 'An Analysis of the Principles of Natural Philosophy,' and 'The Method of Prime and Ultimate Ratios.' Born in Roscommon 1750, died 1800.

YOUNG, THOMAS, born at Milverton, Somersetshire, 13th June, 1773, died in London, where he had long practised as a physician, on 10th May, 1829. If extent of acquirement, originality in conception, and positive contributions to knowledge of highest importance, should ever give enduring fame, the claim might well have been made by Young. Some men, however—almost through inexplicable causes—appear formed to be unfortunate; and unhappily Young lived and died in comparative obscurity. It is probable that his acceptance in 1818 of the Secretaryship of the Board of Longitude, and the connected editorship of the Nautical Almanac, contributed to this unhappy result. It cannot be denied that he was not exactly fitted for either office, and that his administration of them, laid him open to the successful and very eager attacks of persons who had no respect for his genius, nor for any man's,—who, in truth had neither the power nor the inclination to appreciate genius of any kind. Young's chief feats are two. First, he successfully contests with FRESNEL the glory of founding the Undulatory Theory of Light. The idea of propagation by Undulations, in opposition to Newton's conception of propagation by Emission, had been started long before Young's time; but to *him* unquestionably belonged the privilege of originating the explanation of all those more delicate phenomena of Light, by his doctrine of *Interference*. This view had not the advantage of *Fresnel's;* he had no willing auditory: in England, at the time, the *superstition* with which we have hitherto been inclined to invest every illustrious insular name, had not been cleared away from that Immortality which belongs of right to NEWTON. Young's other capital discovery dispelled the mists from another sphere:—it was *he* who primarily detected the key to phonetic Hieroglyphics. Previous to his time, the old Egyptian symbols had been regarded simply as pictorial representations—real pictures, or real, through *analogy*. And, although some thought it probable that the inscriptions also concealed an *alphabetic* writing, no conception had been formed of the way in which *pictorial* representations could pass into *phonetic;* and no key discovered therefore, to the contents of Egyptian records. Aided by the Rosetta stone, Young divined the secret,—clearly preceding CHAMPOLLION, and in theory penetrating farther than even that acute and most deserving Frenchman ventured to go.—We believe that if the merits of our remarkable Countryman were made to rest even on those two memorable discoveries, injustice would be done to him. His mind teemed with new and profound conceptions, and he has left numerous other hints, that will probably yet start out into unexpected importance. Young was buried in Farnborough; but he has a monument—among the motley crowd—in that National Mausoleum, where great men alone ought ever to have been permitted to repose—the Abbey of Westminster. [J.P.N.]

YOUNG, SIR WILLIAM, a miscellaneous writer and member of parliament, born near Canterbury 1750, died, governor of Tobago, 1815.

YOUSOUF, the last governor of Spain for the Oriental caliphs, killed in battle 759.

YPSILANTI, three Greek princes who distinguished themselves in efforts to achieve the independence of their country. CONSTANTINE, born at Constantinople about 1760, became, in 1799, hospodar of Moldavia, and, in 1802, of Wallachia. He was deprived of this dignity, and after the treaty of Tilsit, 1807, resided in Russia; died 1816. ALEXANDER, the most distinguished of the three, was son of the preceding, and was born in 1792. He attained military rank in the Russian army, and, in 1820, became chief of the *Hetaireia*, an association of Greek patriots. He began the war of independence by crossing the Pruth, attended with only a few followers, in March, 1821, but after repeated defeats was obliged to abandon the cause and take refuge in Vienna, where he died in 1828. His brother, DEMETRIUS, also headed the insurgents, and died 1832.

YRALA, or IRALA, DOMINGO MARTINEZ DE, one of the Spanish conquerors of America, companion of Mendoza, died 1567.

YRIARTE, L., a Spanish painter, 1635-1685.

YRIARTE, DON JUAN DE, a learned archæologist, keeper of the Royal Library at Madrid, and chief author of the Improved Orthography and Punctuation of the Spanish Language, 1702-1771. His nephew, DOMINGO, a diplomatist, 1746-1795. THOMAS, brother of the latter, a famous poet, comedian, and fabulist, editor of the Mercury of Madrid, 1750-1791.

YSABEAU, ALEXANDER CLEMENT, a celebrated character of the French revolution, born about 1750. Being sent as a deputy to the convention he became the colleague of Tallien, and a participator in his cruelties at Bourdeaux. He was subsequently a member of the directory and the council of elders; died 1823.

YSAURE, or ISAURE, CLEMENCE, a lady who instituted the floral games at Toulouse, was born there, shortly before the expulsion of the English, about 1450. Her lover being slain in battle, she consecrated her life to the Virgin' and to the cultivation of poesy. She left a considerable revenue for the celebration of the floral games, and for prizes given to successful poets. This festival was celebrated annually, in May, till 1806, when it was repressed. Its history was written by Poitevin.

YVAN. See IVAN.

YVAN, ANTOINE, founder of the religious order of Mercy, flourished in Provençe, 1576-1653.

YVART, J. A. VICTOR, an agricultural writer, called 'The Arthur Young of France,' 1764-1831.

YVER, J., a French novelist, 16th century.

YVES, CHARLES ST., a monk of St. Lazarus, who left his order and became celebrated in Paris as an oculist, 1667-1733.

YVES, ST., a theologian and canonist, appointed bishop of Chartres in 1091, died 1115.

YVETAUX, VAUQUELIN, a French scholar and poet, tutor to Louis XIII., 1559-1649.

YVON, PETER, a controversial writer and proselyte of Labadie, from about 1640.

YVON, P. C., a French physician, 1719-1811.

Y-YN, one of the greatest statesmen produced in China, was born about 1770 B.C. He was minister for thirty-three years to Tai-Kia, whose reign was rendered, by him, one of the most happy and brilliant in the Chinese dynasty. He lived to be nearly one hundred years old, and died in an honourable retirement.

Z

ZABAGLIA, NICHOLAS, an Italian mechanician and architect, to whom the method of transferring fresco paintings is attributed, 1674-1750.

ZABAN, or ZABANIUS, ISAAC, a Hungarian philosopher, and writer in favour of the atomic theory, born about 1670, died 1699.

ZABARELLA, FRANCESCO, cardinal and archbishop of Florence, a learned canonist and writer on ecclesiastical polity, 1339-1417. BARTOLOMMEO, his nephew, also archbishop of Florence, and professor of law, 1396-1442. JACOPO, a descendant of the preceding, a professor of philosophy and commentator on Aristotle, 1553-1589.

ZABOROWA, JAMES, a Polish publicist, employed under the direction of the chancellor, in collecting the laws, 1502-1506.

ZABUESING, J. C., a Ger. writer, 1747-1795.

ZACCARIA, FRANCESCO ANTONIO, a learned Venetian Jesuit, historian of Italian literature, and a defender of the papacy, 1714-1795.

ZACCHIAS, PAOLO, an Italian physician and man of letters, born at Rome 1584, died 1659.

ZACH, CLARA, countess of, daughter of a Hungarian noble, executed for assassinating Casimir, king of Poland, who had outraged her, 1330.

ZACH, F., a German astronomer, 1754-1832.

ZACHARIA, D., a French alchymist, 16th cent.

ZACHARIA, G. T., a Ger. Orientalist, 1729-77.

ZACHARIA, JUSTUS FREDERICK WILLIAM, a German poet, professor at Brunswick, 1726-77.

ZACHARIAH, a king of Israel, B.C. 784.

ZACHARIAH, one of the Jewish prophets, flourished in the reign of Darius, 6th century B.C.

ZACHT-LEEVEN, or SAFT-LEEVEN, HERMANN, a Dutch painter, 1609-1685. His brother, CORNELIUS, a painter of drunken frolics, 1606-73.

ZACUTO, ABRAHAM, in Latin *Zacutus Lusitanus*, a Portuguese Jew, known as a physician and professional writer, 1575-1642.

ZAGO, O., an Italian engineer, 1654-1737.

ZAHN, J., a Germ. mathematician, 1641-1707.

ZAIDOUN, ABOUL WALID AHMED IBN, a Spanish Arabian poet, 1003-1070.

ZAINER, G., a German printer, 1430-1478.

ZAIONCZEK, JOSEPH, a Polish general, who defended the cause of independence till 1814, and then became a partizan of Russia, 1752-1826.

ZAKREZEWSKI, IGNATIUS WYGSYGOTA, a member of the Polish diet, and one of those who distinguished themselves in 1794 in the cause of their country's independence, 1774-1802.

ZALEUCUS, a Greek philosopher, renowned as the legislator of the Locrians, 500 B.C.

ZALLINGER, J. B. DE THARN, a Tyrolese Jesuit and botanist, 1731-1785. JAMES ANTONY, of the same family, a Jesuit, philosopher, and canonist, 1735-1812. F. SERAPHIN, a Jesuit and physician, 1743-1805.

ZALLWEIN, G., a German canonist, 1712-66.

ZALUSKI, ANDREW CHRYSOSTOME, a prelate, diplomatist, and grand chancellor of Poland, 1655-1711. His nephew, ANDREW STANISLAUS, grand chancellor, distinguished as a patron of letters, died 1758. J. ANDREW, brother of the latter, bishop of Kiev, collector of a great library, destroyed at the capture of Warsaw by Suwarrow, 1701-1774.

ZALUZANSKI, ADAM, a physician and botanist of Bohemia, 16th century.

ZALYK, GREGORY GEORGIADES, a Greek of Thessalonica, secretary of embassy, and author of a French and modern Greek Dictionary, 1785-1827.

ZAMAGNA, B., a Latin poet, 1735-1820.

ZAMAKHSCHARI, ABOUL CASSEM MAHMOUD AL, an Arabian poet, 1074-1144.

ZAMBECCARI, F., a Venetian poet, 15th cent.

ZAMBECCARI, COUNT FRANCESCO, an Italian æronaut, born at Bologna 1756, perished in making one of his experim. in balloon navigation 1812.

ZAMBECCARI, JOSEPH, an Italian physician, distinguished in comparative anatomy, 17th cent.

ZAMBERTO, B., a Venetian author, one of the first to translate Euclid, 15th century.

ZAMBONI, B., an Italian author, 1750-1797.

ZAMET, SEBASTIAN, a celebrated Italian financier and court intriguant, time of Marie de Medici, whom he accompanied to France, born at Lucca about 1549, died 1614. His son, JOHN, baron of Murat and camp-marshal, distinguished in the religious wars, died 1620. SEBASTIAN, his second son, chaplain to Marie de Medici, bp. of Langres, and protector of the Port-Royal *savants*, died 1655.

ZAMORA, A., a Spanish physician, 1570-1640.

ZAMORA, BERNARD DE, a learned Spanish ecclesiastic and philologist, 1720-1785.

ZAMORA, GASPARD DE, a Spanish Jesuit, author of a Scripture Concordance, 1546-1621.

ZAMORA, L., a Spanish poet, died 1614.

ZAMOSKI, JOHN, nephew by marriage to Stephen, king of Poland, distinguished as a warrior, diplomatist, and patron of literature, called the 'Defender of his Country and Protector of the Sciences,' died 1605.

ZAMPI, F. M., an Italian poet, died 1774.

ZAMPIERI, C., an Italian poet, 1701-1784.

ZAMPINI, MATTEO, an Italian jurisconsult and partizan of the league, author of works on French history, 16th century.

ZANARDI, N., an Ital. theologian, 1570-1641.

ZANCHI, BASILIO, in Latin *Zanchius*, an elegant Latin poet, born at Bergamo 1501, died in prison 1558. GIROLAMO, his cousin, a celebrated protestant and friend of Peter Martyr, was compelled to leave Italy and become a professor at Heidelberg. He was born at Alzano, in the territory of Bergamo, 1516, and died, some time after losing his sight, in 1590. His works form eight volumes, and one of them, on Predestination, has been translated into English by Dr. Toplady. The father of Girolamo, F. T. ZANCHI, is known in Italian literature as an historian and Latin poet.

ZANE, J., a Venetian poet, 1529-1560.

ZANETTI, ANTONIO MARIA, Count, a Venetian antiquarian who contributed to the perfection of wood engraving, 1680-1766. J. FRANCESCO, of the same family, an archæologist and learned editor, 1713-1782. ALESSANDRO, his brother, an art-writer and librarian of Saint Marc, 1716-1778. BERNARDO, a theologian and historian of the Longobardi, 1690-1762. GUIDO, a learned numismatist, keeper of the museum of antiquities at Ferrara, 1741-1791.

ZANETTINI, J., an Italian jurist, 1430-1493.

ZANIBONI, A., an Italian poet, died 1767.

ZANNICHELLI, J. GIROLAMO, an Italian physician and natural philosopher, 1662-1729.

ZANNONI, J. B., an Ital. archæol., 1774-1832.

ZANOLINI, A., an Ital. Orientalist, 1693-1762.

ZANONI, A., an Ital. agriculturist, 1696-1770.

ZANONI, JACOPO, a botanical writer, director of the botanic garden at Bologna, 1615-1682.

ZANOTTI, J. P., an Italian painter and poet, secretary of the Clementine academy, 1674-1765. ERCOLO, his brother, a poet and writer on sacred subjects, 1684-1763. F. MARIA, a third brother, distinguished as a philosopher by his labours in popularizing the systems of Descartes and Newton in Italy, 1692-1777. EUSTACHIUS, nephew of the preceding, an astronomer, 1709-1782.

ZAPF, G. W., a German *savant*, 1747-1810.

ZAPF, N., a German Hebraist, 1600-1672.

ZAPPI, GIAMBATISTA, a philosophical writer of Italy, born at Imola about 1540. His grandson, GIAMBATISTA FELICE, a lawyer and poet, author of Odes and Sonnets, remarkable for purity of style, 1667-1719. FAUSTINA, the wife of the latter, was a daughter of the famous Carlo Maratti, and like her husband was skilled in poetry.

ZARAGOZA, JOSE DE, a Spanish Jesuit, disting. as a mathematician and astronomer, 1627-78.

ZARATE, AUGUSTIN DE, a Spanish historian of the discovery and conquest of Peru, 16th cent.

ZARATE, F. L. DE, a Spanish poet, d. 1658.

ZARCO, JOHN GONZALES, a Portuguese navigator who discovered the islands of Porto Santo and Madeira, the former in 1417, the latter in 1419. He become governor of Madeira, and was the founder of Funchal.

ZARLINO, J., a distinguished musician, composer, and theologian of Chioggia, 1519-1599.

ZAROTTI, C., an Italian physician, 17th cent.

ZASE, ULRIC, a Swiss councillor; although a catholic, he had a great admiration for Luther, whom he styled the Phœnix of Theologians. Many of his works were, consequently, put by the pope in the index; 1461-1535.

ZAVARONI, ANGELO, an archæologist and biographer, born in Calabria 1710, died 1767.

ZAVAVI, ABOUL HASSAN, an Arabian grammarian, author of a poem on Syntax, 1168-1230.

ZAWADOWSKI, PETER VASSILIEVITCH, Russian minister of instruction time of Alexander, father of the present emperor, 1738-1812.

ZAYAS Y SOTOMAYOR, MARIA DE, a Spanish lady, celebrated by her writings, last cent.

ZAZIUS, ULRIC, professor of law at Friburg, and author of several learned works, 1461-1535. His son, JOHN ULRIC, 1521-1570.

ZEA, DON FRANCISCO ANTONIO, a botanist and statesman, was born in New Grenada 1770, and received the appointment of director of the botanic cabinet at Madrid. On the abdication of Charles IV. he became minister of the interior, and on the retreat of the French went to South America, where he aided in founding the republic of Columbia, of which he became vice-president. In 1820 he came to England as a diplomatic agent to that government and died here in 1822.

ZEECHI, J., an Italian physician, 1533-1601.

ZECCHI, LELIO, an Italian theologian, jurisconsult, and canonist, died 1610.

ZECCHINI, P., an Ital. physiologist, 1739-1793.

ZEGERS, H., a Flemish painter, 17th century.

ZEGERS, T. N., a Flemish ascetic, died 1559.

ZEIBICH, C. H., a Hung. theologian, 1717-1763.

ZEID-BEN-THABET, one of the secretaries of Mahomet. He greatly contributed to disseminate the new doctrine, and made, by order of the caliph, Abou-Bekr, a complete copy of the Koran, which alone came to be considered as authentic.

ZEIDLER, C. S., a Ger. historian, 1719-1786.

ZEIDLER, J. G., a German poet, died 1711.

ZEIRI-BEN-MOUNAD, called AL TACLANI, chief of the Zeirites-Sanhadjites. He conquered the whole of the country extending from Algiers to Tripoli, and presented it to Obeid-Allah. He rendered great services to the Fatimites, and was killed at the battle of Mansourah 971. His son, YOUSSOUF-BALKIN, founded the dynasty of the Zeirites-Sanhadjites.

ZEKY-KHAN, MOHAMMED, half-brother of Kerym-Khan, king of Persia, on whose death in 1779 he seized the throne. He was distinguished for nothing but his cruelty, and was put to death by his soldiers shortly after his assumption of power.

ZELADA, F. X., an Italian cardinal, secretary of state, and librarian of the Vatican, 1717-1801.

ZELLER, J. G., a Ger. physician, 1656-1734.

ZELOTTI, BATTISTA, an Italian painter, the fellow-student of Paul Veronese, under Antonio Badile, uncle of the latter, 1532-1592.

ZELTER, C. F., a Ger. composer, 1758-1832.

ZELTNER, GUSTAVUS G., a German philologist and historian, 1672-1738. His brother, J. CONRAD, also a learned writer, 1687-1720.

ZENDRINI, BERNARDO, a celebrated mathematician and hydraulic engineer, employed by the Venetian and Austrian governments in important public works, author of several treatises, 1679-1747.

ZENO. There were three celebrated Zenos, ZENO of ELEA, the pupil and expounder of Parmenides; ZENO of CITTIUM, in Cyprus, founder of the school of the STOICS; and ZENO the EPICUREAN, who lived in the times of Cicero, and had the honour of teaching that illustrious Orator, Philosopher, and Statesman. The two first alone, demand notice here.

ZENO OF ELEA, in Magna Græcia, born about the year 500 B.C. Xenophanes had found, or rather divined UNITY, in the Idea of an unknown God. Parmenides took a different view, and identified the Unity we seek, with the IDEA *of it*; in other words, he asserted it to be wholly subjective. Zeno followed his great Master; and if we rightly interpret enigmatical traditions concerning him, it appears that he must have advanced very far. He is said to have denied the existence of Space, of Motion, and of many posi-

tive Relations: the very absurdity of the stories set afloat respecting his doctrines, evinces how much he must have been misunderstood—not by his contemporaries perhaps, but by later writers. There is no clue to the foregoing statements, save one. His scheme must have corresponded almost exactly with Kant's: he had separated subjective laws from objective reality, and proclaimed that over the chasm between, he could discern no bridge. It is indeed sufficiently strange to detect traces of the illustrious German Thinker, at the far end of two thousand three hundred years! That our interpretation is most probably true, further appears from Zeno's great and undeniable achievement. The existence of a Science of *Logic*, was discerned by *him* first of all; and he laid down many of its Laws. *Logic*, be it remembered, is the Science which explores not the qualities or order of external Things, but the conditions under which the Mind moves, as it determines and judges; and what more likely, than that the reality of such a Science should be earliest seen by the Philosopher, who first of all recognized the distinctiveness of Subjective Laws? [J.P.N.]

ZENO OF CITTIUM, in Cyprus, lived about 250 years before Christ. The external incidents of Zeno's life were in no wise remarkable; his importance and fame rest on his being the founder of the sect of the STOICS,—(named, because Zeno chose to teach under the Porch, or Στοα)—a sect of greater and wider influence than any other that sprung up during the latter days of Greece, for it took root within the soil of Rome, and obtained sway over the Jurisprudence as well as the Morals of the Republic. The foundations only, of Stoicism, were laid by Zeno, who seems to have been indebted for his chief maxims to Antisthenes the Cynic; it was perfected as a philosophical scheme by the more vigorous genius of Chrysippus of Soli, who reached the year 210 B.C.—Stoicism is not a system of *Morals* alone; it had its *Logic* and *Theory of Nature* besides. Its doctrine of the Human Understanding, or regarding the origin and nature of Knowledge, is surprisingly similar to *John Locke's*. Assuming *Sensation* as the source and foundation of whatever can be discerned in the mind, the Stoic claimed for Mind the power of acting on its sensations, comparing them, grouping them, and judging *so* concerning them. In this way, a *Judgment* is formed by a *synthesis* of *Sensations*,—what they termed a *comprehensive representation*, by a synthesis of individual Judgments; and finally, that ultimate and universal synthesis, which is *Science*. The critical student will not fail to observe that every trace of the profound philosophy of Plato had already disappeared.—Next, as to Stoic *Physiology*. This is a *Necessity*, a Fatalism pure and simple. They speak indeed of God. They speak of Providence. And of the beauty and perfection of the order of the World, in which each atom has its harmonious place; symmetry the most unchallengeable reigning through all, and the wisest economy also, seeing there is nothing useless—not a solitary molecule that can be called superfluous, neither one, unnecessary. To closer scrutiny, however, this God of the Portico, appears an existence devoid of personality and self-consciousness: the name is applied to an hypothetic germ or seed, from whose necessary and determinate developments, Nature and all the varieties of Being have sprung. There is no God distinct from the material Universe: there is but one substance, which, considered in its forms, is NATURE—in its essence, GOD. Assuredly also a powerful declension from the Theism of the greater Times!—Neither can we speak, in less qualified terms, of the vaunted *Morality* of Stoicism. With much semblance of nobleness, and undoubtedly containing wherewithal to nourish a noble nature, it is yet false through exaggeration, and that vicious exclusiveness which always characterizes the decay of Science. It is verily a maxim to be engraven on every soul—'Be strong and free!' But the question recurs, what is *strength?* Is it the power to regulate passion and desire, to enthrone Reason as the judge or umpire over the tendencies inseparable from our complex nature, or the ambitious, the unnatural, the vain effort to extirpate passion and desire, so that ceasing to be *Men* we may rival the Gods? No philosophy worthy the name of Ethical, ever failed to recognize it as Man's primal duty, to curb the appetites, extinguish evil passions, and so govern the soul; but the Stoic's conception of Order, is not government, it is extinction: just as the blind despot destroys the freedom he cannot rule, and names his solitude *Peace!* History never offers a more certain indication of decrepitude of Thought and defect of true Manliness, than the acceptance of exaggerations like these. Speaking scientifically, they involve an omission of many of the essential elements of the problem whose solution is aimed at: and under another view, they more than indicate the prevalence of practical insincerity:—no Human Being can get beyond the position of a MAN; and he who pretends to do so, universally sinks below it. It is a singularly instructive fact, that this 'complete liberty' of the Stoic, was often held consistent with the worst excesses. Having triumphed, the disciple held that no crime could stain him: like multitudes of Mystics, he had achieved salvation; and neither worldliness, nor meanness, nor crime, could suffice to disturb his sanctimoniousness, or effect his Fall!—It is easy to see that out of such a doctrine, Men in themselves great, might extract much to augment their Fortitude. But if Stoicism aided in producing a SCIPIO, a THRASEAS, an EPICTETUS, or MARCUS AURELIUS; it also evolved and justified the most disastrous record in the annals of Rome—issue of the almost maniac ferocity of MARCUS BRUTUS. [J.P.

ZENO, called *the Isaurian*, emperor of the E was a chief of the Isaurian guard who obtained favour of Leo I., and married his daugh Ariadne. He exercised the imperial power f 464 to 491, when he found himself in the mid dangers, from which he sought the escape o vion in debauchery. Four days after his supp death, Ariadne married Anastasius.

ZENO, APOSTOLO, called 'the father of Italian Opera,' was born at Venice in 168 became famous by a periodical work entitled 'I Giornale de Litterati,' which he commenced 1770. As a dramatic writer he is compared Corneille, and his works form 11 volumes, p lished in 1744. Died 1750.

ZENO, C., a Venetian admiral, 1334-1418.

ZENO, NICOLO and ANTONIO, brothers of the preceding, are celebrated in the history of navigation, by their alleged discovery of America prior to the voyage of Columbus. It is considered probable that they reached Greenland. The former died in 1395, the latter 1405. CATERIGO, grandson of Antonio, went as ambassador to Persia, and wrote a narrative of his mission, 1472. NICOLO, of the same family, a man of letters, and member of the council of ten, 1515-1565.

ZENOBIA, SEPTIMIA, a princess of Arabian descent, who became queen of Palmyra in the desert, after the murder of her husband, Odenatus, in 267. The latter was killed by his nephew at a festival, and Zenobia, who acted with great energy, assumed the title of queen of the East. She was deprived of her dominions by the emperor Aurelian in 272. and died in a private retirement near Rome. The celebrated critic Longinus acted as her secretary, and was put to death by the Romans.

ZENOBIUS, a Greek sophist, 2d century.

ZENODORUS, a tyrant of Syria, d. B.C. 20.

ZENODORUS, a Greek sculptor, 1st century.

ZENTGRAVE, J. J., a Ger. theolog. 1643-1707.

ZEPERNICK, C. F., a Ger. jurist, 1751-1801.

ZEPHIRINUS, a bishop of Rome, 197-217.

ZERBE, P. DE, an Ital. missionary, 1712-1716.

ZERBIS, G. DE, an Ital. anatomist, died 1505.

ZERMEGH, J., a Hungarian histor., 16th cent.

ZERNITZ, C. F., a German poet, 1717-1744.

ZEROLA, T., an Italian canonist, 1548-1603.

ZESEN, P. DE, a German poet, born 1619.

ZEUNE, J. C., a Ger. philologist, 1736-1788.

ZEUXIS, one of the most celebrated painters of antiquity, was born at one of the ancient towns of Heraclea, probably in Macedonia, about 460 B.C. Zeuxis was at the height of his reputation in the time of Archelaus, king of Macedon, 413-399 B.C.; he painted the palace of this king at Pella, for which he was paid 400 minæ, about £1,600 sterling. Much concerning Zeuxis has been preserved in ancient writers; nearly every notice reflecting upon him the very highest praise, not only in the shape of popular anecdotes, but in the positive and circumstantial statements of art criticism: and some of the facts recorded concerning this painter, show how similar must have been the ways of art among the Greeks upwards of 2,000 years ago, to what they have been during their great epoch in Europe in modern times. The *naturalist* development of art as connected with its condition the generation before, in the case of Polygnotus is clearly demonstrated in the various accounts of Zeuxis, both as to subject and treatment, at the same time combined with the principle of selection; art was no longer merely representative, but thoroughly dramatic. Polygnotus, Zeuxis, and Apelles represent well the three great phases of Greek painting, the ideal, the dramatic, and the refined, in which the technical qualities attained their utmost perfection, and like most clevernesses obscured or destroyed more essential qualities. Amongst the most remarkable works of Zeuxis, and they were many, are to be mentioned particularly the celebrated 'Juno of Croton,' and a 'Family of Centaurs.' The former was painted from five beautiful virgins selected by the city, and was one of the most celebrated of all Greek pictures, and it has for ages been the theme of poets of all countries. Zeuxis himself subscribed on the picture the three lines from Homer which speak of Helen's beauty:—

> 'No wonder such celestial charms
> For nine long years have set the world in arms!
> What winning graces! what majestic mien!
> She moves a goddess, and she looks a Queen.'
> Pope, *Il.* iii., 156-8.

Lucian says that Zeuxis seldom or never exerted his powers upon such vulgar or hackneyed subjects as gods, heroes, or battles. His characteristics have been described as a grand style of form, combined with a high degree of execution, and powerful effect of light and shade; for Appollodorus, the Athenian painter, who may be termed the Greek Rembrandt, complained that Zeuxis had robbed him of his art. To all these fine qualities we must add his highest, his dramatic power of composition; in expression Aristotle tells us that he was inferior to Polygnotus. There are several stories told about illusive pictures painted by Zeuxis and Parrhasius of Ephesus: the only value of these is to show that *illusion* was one of the qualities of Greek painting, which will acquire it a higher consideration in some minds than any other quality; —(Wornum, *Epochs of Painting Characterized*, &c., and *Penny Cyclopædia*, Art. Zeuxis.) [R.N.W.]

ZEVECOT, J., a Flemish poet, 1604-1646.

ZHINGA, BANDI, a queen of Angola, who maintained a struggle for 28 years with the Portuguese, and after performing prodigies of valour was despoiled of the larger part of her dominions. She then submitted to be baptized as a means of preserving the remainder, 1581-1663.

ZICHEN, E. DE, a Flemish contro., 1482-1538.

ZIEGELBAUER, CARACHORD, a German Benedictine and historian of his order, 1696-1750.

ZIEGENBALG, BARTHOLOMEW, a German philologist and missionary to the East Indies, 1683-1719.

ZIEGLER, C. J. A., a Ger. physician, 1735-95.

ZIEGLER, G., a German jurist, 1621-1690.

ZIEGLER, J., a Latin dramatic writer and biographer of Bavaria, 1520-1564.

ZIEGLER, J., a Bavarian theologian, mathematician, and geographical writer, 1480-1549.

ZIEGLER, W. C. L., a Ger. theol., 1763-1809.

ZIEGLER, ST. KLIPPHAUSION H. ANSELME DE, a poet of Saxony, 1653-1690.

ZILIOLI, A., a Venetian historian, 16th cent.

ZIMARA, M. A., an Ital. physician, 1460-1532.

ZIMISCES, emperor of the East. See JOHN.

ZIMMERMANN, EBERHARD AUGUSTIUS WILLIAM VON, professor of natural philosophy at Brunswick, author of political works and treatises in natural history, 1743-1815.

ZIMMERMANN, HENRY, author of an account of the third voyage of Captain Cook, with whom he sailed in the *Discovery*, 1776.

ZIMMERMANN, JOHANN GEORG VON, was one of the most eminent of continental physicians in the eighteenth century, both as a practitioner and as a professional writer. His miscellaneous writings also were numerous; and one of these, his striking but not very philosophical essay 'On Solitude,' is now, indeed, quite forgotten in England, but was once very popular among us. It was first printed, as a sketch, in 1756, and afterwards in its complete shape in 1785.—Zimmer-

mann was born in 1728, at Brugg, in the canton of Bern. After having studied at Göttingen, he practised medicine successively at Bern and in his native town. His tendency to hypochondria showed itself even thus early, but did not disqualify him from either active practice or from zealous and miscellaneous studies. His professional celebrity gained him, in 1768, the appointment of royal physician at Hanover; after the second appearance of his work 'On Solitude,' he was invited to St. Petersburg; and the year after he attended Frederick of Prussia in his last illness. His writings after this were chiefly gossiping collections, and expressions of the horror with which he regarded the revolutionary principles that were becoming prevalent. His melancholy continued to increase; and he was completely deranged for some time before his death, which took place in 1795. [W.S.]

ZIMMERMANN, JOHN JAMES, a Swiss theologian, professor at Zurich, 1685-1756.

ZIMMERMANN, JOHN JAMES, an eloquent German preacher, generally regarded as a disciple of Bœhmen and Brouquelle, whose doctrines he rendered highly popular; born in the duchy of Wurtemberg, 1644, died at Rotterdam, 1693. Zimmermann made many proselytes in Germany and the United Provinces, and at the moment of his death was about to depart for America to escape the persecution to which he had been subjected. For some years he was professor of mathematics at Heidelberg. The most notorious of his works is entitled a 'Revelation of Antichrist.'

ZIMMERMANN, JOSEPH, a Swiss officer, poet, and military writer, 17th century.

ZIMMERMANN, MATTHIAS, a learned theologian of Hungary, 1625-1689.

ZIMMERMANN, WILLIAM, a German pastor and controversial writer, 16th century.

ZIMOROWICZ, SIMON, a Russian poet, about 1604-1629. A brother of his, named BARTHOLOMEW, was a biographical writer.

ZINCKE, C. F., a German painter, 1684-1767.

ZINGARELLI, NICOLO, an Italian musician, known at the court of Napoleon in the earlier years of the empire, and afterwards chapel-master at the Vatican, born at Naples 1752, died 1837. He is the author of several operas.

ZINKE, G. H., a Germ. economist, 1692-1769.

ZINKGREF, J. G., a German poet, 1591-1635.

ZINN, J. G., a German anatomist, 1727-1759.

ZINZENDORF, NICHOLAS LOUIS, Count Von, founder of the Herrnhuters, or Moravian Brethren, was born at Dresden in 1700. According to his own account (in his 'Natural Reflections on Various Subjects'), he aspired to form a society of believers from his boyhood. On coming of age in 1721, he settled, with this object in view, on his estate at Bertholsdorf, in Upper Lusatia, and was there joined by several proselytes from Bohemia. By 1732 the numbers who had flocked around him amounted to six hundred, and all these were subject to a species of ecclesiastical discipline, or monastic despotism, which brought them in spirit and body, or was intended so to do, under the most absolute control of their leader. From an adjacent hill, called the *Huth-berg*, was derived the name of the colony *Huth des Herrn*, contracted to *Herrnhutt*, the name of the sect;—the apellation of Moravian Brethren was assumed for his party by Count Zinzendorf, for the sake of connection with the separatists of Bohemia and Moravia, partly derived from Valdo, the forerunner of Luther: some of these, indeed, were among his colonists. Zinzendorf assumed various titles as the chief of the Herrnhuters, all of which really pointed to a *pontificate* as his function. From 1733 his missionaries began to spread, not only over parts of Europe, but in Greenland and North America—even Africa and China were not forgotten. To him, in fact, Wesley was directly indebted for both his religious organization and his missionary plans, which became so eminently successful; that indefatigable labourer having passed some time with Count Zinzendorf at Herrnhuth. The interference of the government with the Count's projects, can hardly be regarded as a measure of persecution, as secret doctrines were undoubtedly held by him, and thus motives given to his followers, and objects sought, of which, whether good or evil, the established authorities could take no cognizance. The history of the sect is curious and interesting: next to their organization in classes, the use of singing, which furnished the Wesleys with a valuable hint, is one of its most remarkable characteristics; under this head some singular details might be given. Something might be said also on the connection of a certain marriage rite with the theory of regeneration, the efficacy of which was probably tried by the Herrnhuters in common with the Quakers. Count Zinzendorf died amongst his people on the 9th of June, 1760. [E.R.]

ZINZENDORF, PHILIP LOUIS, Count Von, an Austrian statesman, by whom the wars with Turkey and France were decided, chancellor in the reign of Joseph I., 1671-1742. His son, of the same names, a cardinal, 1699-1747.

ZINZERLING, J., in Latin *Jodicus Sincerus*, a philologist of Thuringia, 1590-1618.

ZIRARDINI, ANTONIO, a learned Italian jurisconsult and archæologist, 1725-1784.

ZISKA. The real name of this renowned leader in the early wars of religion in Germany was JOHN TROCZNOW. He acquired the name of Ziska (which means one-eyed,) from the loss of an eye in battle. He was born about 1380. He was of one of the noblest families in Bohemia, and was brought up in the court and camp of the emperor. Like the greater number of his Bohemian fellow-countrymen, he embraced the tenets of John Huss; and when that reformer was cruelly and perfidiously put to death by the council of Constance, the Bohemians flew to arms to revenge their leader's martyrdom, and to protect themselves from the persecution with which they were menaced by the bigotry and tyranny of the emperor Sigismond. They elected John Ziska their general; and in a few months he raised and disciplined a formidable army, and organized a war of independence throughout Bohemia. The emperor invaded Bohemia, but Ziska attacked and utterly defeated him, 11th July, 1420. A negotiation and temporary pacification followed; but the war soon broke out again with redoubled violence, each side being exasperated against the other by religious fanaticism, and by the thirst for retaliation for deeds of atrocious cruelty. Ziska was everywhere victori-

ous. He invaded Austria and Hungary, and lost his remaining eye at the siege of Raab. Though now entirely blind he continued to command the Bohemian armies, and gained a victory over Sigismond at Arssig, which placed the Austrian dominions at his mercy. Ziska's ferocity was equal to his military skill; and his followers spread the most fearful and indiscriminating ravages wherever they marched. The emperor now earnestly sought terms of peace, and a treaty, most humiliating to Austrian pride, was concluded by Ziska's influence over the Bohemians. Ziska was on his way to meet the emperor when he died of the plague, 11th October, 1425. There is a legend that by his dying orders his skin was, after his death made into a drum, and used by the Bohemians in their subsequent wars with the emperor. [E.S.C.]

ZIZIANOFF, PAUL DEMETRIEVITCH, a Georgian prince in the service of Russia, assassinated at the instance of Khan Ibrahim, 1805.

ZOBOLI, A., an Italian astronomer, 17th cent.

ZOCCOLI, CARLO, an architect, engineer, and jurisconsult of Naples, 1718-1771.

ZOE, a mistress of Leo VI., emperor of Constantinople, who was married by him after she had defeated a conspiracy, and died in less than two years after her elevation to the throne, 893. She is said to have poisoned her first husband. A *second* ZOE was successively the mistress and wife of the same emperor: she condescended to the former character, in order to test the probability of her supplying Leo with a successor, and was crowned three days after the baptism of her son, Constantine VII., in 905. The latter succeeded to the throne in 911, and Zoe exercised the sovereign authority some time: she was at length exiled, and died in obscurity, 919.

ZOE, empress of the East, was the daughter of Constantine IX., and became the wife of Romanus III. in 1028, when she was in the forty-eighth year of her age. She was a debauched woman, and became the murderess of her husband, in order to place her lover on the throne, who reigned under the title of Michel IV. The latter dying, was succeeded by his nephew, Michel V., who was deposed by the people, and Zoe and her sister, Theodora, proclaimed joint sovereigns. She displayed great ability and firmness in the government; and in 1042 married in third nuptials Constantine Monomachus. She continued to reign till her death at the age of seventy-four, in 1052.

ZOEGA, GEORGE, a Danish archæologist, celebrated for his labours in Egyptian philology and antiquities, 1755-1809.

ZOES, H., a French jurisconsult, 1571-1627.

ZOHEIR, an Arabian poet of the period of Mahomet. The work of his which has come down to the present time celebrates some of the Arabian princes, and was published at Leipzig in 1792, with a Latin translation and Notes.

ZOILUS, a Greek critic and rhetorician, author of works against Homer, B.C. 283-247.

ZOLA, J., a Venetian theologian, 1739-1806.

ZOLKIEWSKI, STANISLAUS, hetman of the Polish armies under Sigismond III., was engaged in many important battles against the Russians, and died gloriously fighting against the Turks, 1547-1620.

ZOLL, H., a German jurisconsult, 1643-1725.

ZOLLIKOFER, GEORGE JOACHIM, a Swiss pastor, famous for his amiable character and eloquence as a preacher, author of 'Devotional Exercises' and Sermons, which have been translated into English, 1730-1788.

ZONARAS, JOHN, a Greek historian and ascetic writer of the 12th century.

ZONBOV, the last favourite of Catharine II. of Russia. He was made commander of the artillery, and realized an immense fortune from his exactions. Excited by Paul I., he took part in his assassination; died 1817.

ZONCA, VICTOR, an Italian architect, author of several curious mechanical inventions, of which he has written an account, published 1607.

ZOPELLI, J., a Venetian poet, 1639-1718.

ZOPF, J. H., a German historian, 1691-1776.

ZOPPIO, GIROLAMO, an Italian dramatist, died 1591. His son, MELCHIOR, a dramatic writer and philosopher, 1544-1634.

ZOPPO, P., an Italian painter, died 1515.

ZOPPO DI LUGANO, the commonly received name of J. B. DISCEPOLI, an Italian painter of the Milanese school, 1590-1660.

ZORG, HENRY, whose proper name was KOKES, a Dutch painter of interiors, 1621-1682.

ZORN, J., a German botanist, 1739-1799.

ZORN, P., a German philologist, 1682-1746.

ZOROASTER, or ZERDUSHT, the founder, or rather, as we believe, the *Reformer* of the Religion of the Parsees; born at Urmia, in Azerbijan, about 589 B.C., in the reign of Darius Hystaspes. We shall not speak here of the fables concerning Zoroaster, nor seek to follow him during the twenty years he is reported to have spent in meditation among the awful solitudes of inaccessible Elbrooz. It is of chief moment to recognize him as the earliest systematic expounder of that solution of the Mystery of Evil, which may be termed *Spiritual Dualism*. He imagined two mighty spirits in contest — ORMUZD and AHRIMAN — GOD and the DEVIL; and in this, as we have said, he most probably reproduces an older mythology of the Parsee race. In English, we have the doctrine of Zoroaster in the immortal verse of Milton; nor indeed did the Hebrews ever have any notion of Dualism, until after their intermixture—during times of captivity—with the farther East. Ormuzd, was conceived by Zoroaster, symbolized by Light. The Sun a visible type of Him; and Fire the expression of his energy. Fire-worship spread, extensively through India and Higher Asia; but, as usual, it became a superstition. Schism followed on the death of Zoroaster, who, any more than other greatest Men, had no true Successor. [J.P.N.]

ZORZI, ALESSANDRO, in Latin *Georgius*, a Venetian theologian, 1747-1779.

ZOSIMUS, a Greek historian of the 5th century, contemporary with Honorius and Theodosius the younger. His work is a history of the Roman emperors, reaching to the year 470, and is favourable to Christianity. It was translated into English under the title of 'The New History of Count Zosimus,' 1684.

ZOSIMUS, a pope of Rome, 417-418.

ZOUCH, or ZOUCHE, RICHARD, author of several works in Latin on civil, military, and maritime jurisprudence, was born at Anstey, in Wilt-

ZUMBO, GAETANO JULIO, a famous Sicilian artist; he learnt, without the assistance of a teacher, the principles of sculpture, and, after having profoundly studied anatomy, he gained great reputation by his figures in a coloured wax, the preparation of which he kept secret; 1656-1701.

ZUMSTEEG, J. R., a Germ. comp., 1760-1802.

ZUNIGA, DON DIEGO ORTIZ DE, historian of the civil and ecclesiastical affairs of Seville, 17th ct.

ZURBARAN, F., a Spanish painter, 1598-1662.

ZURITA, J., a Spanish historian, 1512-1581.

ZURLA, P., an Italian antiquarian, 1769-1834.

ZURLAUBEN, LATOUR CHATILLON DE, an ancient Swiss family, which produced many distinguished warriors, from the 12th to the 16th centuries. The best known is BEAT FIDELE ANTOINE JEAN DOMINIQUE, Baron Latour Chatillon de Zurlauben, who became lieutenant-general, and devoted his latter years to literature. His works are a 'Military History of the Swiss in the French Service,' a 'History of the Swiss and their Allies,' a 'Picturesque Tour in Switzerland,' and various memoirs; born at Zug 1720, died 1795.

ZURLO, JOSEPH, Count, a Neapolitan statesman, born 1759, and named finance minister 1798. In this capacity he ventured on reforms which led to his dismissal, but he became minister again under Murat in 1809, and in the fresh circumstances of 1820. On the latter occasion the influence of the Carbonari deprived him of power. Died 1828.

ZUSTRIS, L., a Dutch painter, died 1600.

ZUZZERI, BERNARDO, an Italian Jesuit and missionary in Croatia, 1683-1762. J. LUC, of the same family, a celebrated numismatist, 1716-1746.

ZWANZIGER, J. C., a Hungarian philosopher and opponent of Kant, 1732-1808.

ZWEERS, JEROME, a Dutch poet, 1627-1696. His grandson, CORNELIUS, a dramatist, died 1774.

ZWELFER, J., a German chemist, 1618-1668.

ZWICKER, DANIEL, a theologian of Dantzic, chief of the Tolerants, 1612-1678.

ZWINGER, THEODORE, a German physician and philosophical writer, flourished at Basle, 1533-1588. His son, JAMES, a physician and Hellenist, 1569-1610. THEODORE, son of the latter, a theologian and superintendent of the churches at Bale, 1597-1654. JOHN, son of Theodore, a theologian and bibliographer, 1634-1696. THEODORE, son of John, a physician, anatomist, and botanist, 1658-1724. JOHN RODOLPH, their nephew, a physician and founder of a scientific society, 1692-1777. FREDERIC, his brother, a physician and naturalist, 1707-1776.

ZWINGLI, or ZUINGLIUS, ULRICK, the great Swiss reformer, was born at Wildhausen, in the canton of St. Gall, in 1484. His early education was carried on at Basel, and afterwards at Berne. The Dominican monks, in this place, attracted by his talents and rising reputation, sought to entrap him into their order, but his father, in order to remove him from the scene of temptation, sent him off to Vienna. In 1502, and being eighteen years of age, the young scholar returned home, and soon repaired again to Basel and took his degree as master of arts. Under the teaching of Wittenbach, who had been acting along with the famous Reuchlin, his mind received the first germs of free inquiry—those seminal truths, which, in his quick and genial mind, soon ripened into harvest. He preached his first sermon in 1506, and was chosen pastor of Glaris. Here he remained ten years, and during that period he mingled in the strife of arms against the French. The young pastor, at the same time, devoted himself to the study of Greek and Hebrew, gradually made the Scriptures his sole and supreme rule of authority, and publicly expounded the Gospels and the Epistles. In 1516 he had been chosen preacher to the Abbey of Einsidlen, a famed spot of popish pilgrimage and superstition, and the year following he removed to a similar position in the cathedral of Zürich. The effect of his honest preaching of the gospel soon became apparent in the city and country, and his general character and opinions produced a deep and universal sensation. While this state of transition was so marked, the crisis was hastened, in 1518, by the arrival of Samson, the seller of indulgences. The traffic in these 'Roman wares' roused the indignation of Zwingli and led to a keen exposure and a successful resistance. Luther's writings were, at the same time, largely circulated at the recommendation of the reformer. The plague broke out, and, during its continuance, though weak himself from exhaustion, he assiduously tended the sick and dying. His zealous labours grew in number and results, the simplicity of the gospel was more distinctly apprehended by him; but the friends of the popedom were enraged, and Zwingli was tried, in January, 1523, on a charge of heresy. Rome gained nothing by the trial. Zwingli presented 67 propositions, and defended them from Scripture. The reformer gathered courage with growing difficulties, and, in 1524, the council of Zürich remodelled the public worship according to the views and wishes of Zwingli. Pictures, statues, and relics were removed from the churches, and mass was abolished. Opposition to the reformed doctrines was meanwhile gathering in the other cantons. The question arose, whether each canton was free to choose its own form of religion, or whether the confederation should interfere; Zürich contended for its individual liberty and independence, but was opposed by the Waldstettes, or the primitive democratic cantons of Schwytz, Unterwald, Urzug, and Lucerne. The triumph of the reformation at Berne, and other places, threw those forest cantons into wilder commotion, and, in consonance with their views of their federal polity, they took up arms for Rome. Zürich, encouraged by Zwingli, called out its troops and put itself into a posture of defence. Efforts were made to maintain peace, but it was of no long duration, and after various diplomatic negotiations, hostilities finally commenced. Zürich had also lost somewhat of its earlier evangelical purity, while the neighbouring states were conspiring for its ruin. In the awful emergency, when the public mind was alarmed by a series of omens and prodigies, the reformer maintained tranquillity. The war began. Zürich was cowardly, dilatory, and far from being prepared, but the horn of the enemy echoed among their hills, and the devoted Zwingli mounted his caparisoned horse, took farewell of his wife and children, and went forth as a patriot and warrior to share in the common danger. The Zürichers marched to meet the Waldstettes, but were defeated at Cappel with great slaughter, 11th October, 1531. Zwingli was found, after the battle, lying

on his back and his eyes upturned to heaven, with his helmet on his head, and his battle-axe in his hand. He had been struck near the commencement of the engagement, and then as he fell and reeled, he was several times pierced with a lance. He was living when discovered in the evening; but the infuriated fanatics soon despatched him. Next day his dead body was barbarously quartered and burnt. Thus perished this hero-martyr. The contests of Zwingli and Luther on the nature of the Sacrament of the Lord's Supper are well known, but the Swiss proved himself freer from early prejudice and traditional teaching than his great German antagonist. It is needless to discuss the relative merits of the two illustrious reformers, their position and sphere of influence being so very different. The fame of Luther has overtopped that of Zwingli, yet the Swiss divine had perhaps more caution and sagacity, and certainly more learning and refinement than the Saxon. He was also earlier alive to the errors of Rome, and though he died a young man, yet in his narrower circle of action he carried out the reformation farther than Luther did. The works of Zwingli were published in four folios, Tiguri, 1581; and in eight octavos, edited by Schuler and Schulteas, Zürich, 1828-1842. [J.E.]

ZYTH, A. VAN, a Dutch theologian, 17th cent.

ZYLL, OTHO VAN, in Latin *Zylius*, a Dutch poet and professor of rhetoric, 1588-1656.

ZYPE, FRANCIS VAN DEN, in Latin *Zypæus*, professor of anatomy at the university of Louvain, author of a work published 1683.

ZYRLIN, or ZIERLIN, G., a Swiss pastor and Latin poet, 1592-1661. An explication of the prophet Abdias, written in German, is ascribed to him.

APPENDIX.

ABBAS PACHA, viceroy of Egypt, was the grandson of Mehemet Ali, whom he succeeded in 1849. He was a man of no particular character, but exhibited a friendly disposition towards the English, chiefly, perhaps, from his hatred of French influence. Died July 13th, 1854, and was succeeded by Said Pasha, the youngest son of Mehemet Ali.

A'BECKETT, GILBERT, was the second son of a solicitor of large practice in Golden square, London, who dealt in the now all but extinct business of providing young men of fortune with parliamentary boroughs. Young Gilbert, in common with his brothers, was educated at Westminster school. Before A'Beckett had left Westminster, that talent for ridicule began to display itself, which a wit of the day very happily characterized, when he said 'A'Beckett would contrive to put the pyramid under a thimble.' At a very early age, in conjunction with one of the members of the Mayhew family, he started a small publication called the *Cerberus*, where will be found not a few of the jokes and germs of articles that afterwards appeared full blown in *Punch*. Though vehemently admired and vehemently puffed by a clique, *Cerberus* proved a mercantile failure. No sooner had it ceased to growl, than the *Beacon* rose to warn; this more ambitious venture proved disastrous to the spirited publisher, Richardson. The *Beacon* 'paling its ineffectual fire,' A'Beckett and his staff were once more cast upon the bosom of mighty London. Something which seemed relief soon came, however, in the shape of an advertisement for a successor to 'Dirty Cummings,' the delicate sobriquet of the dramatic critic of the *Weekly Dispatch*. From among a host of competitors A'Beckett proved the successful candidate for the vacant office of theatrical censor, and great was the rejoicing of the literary *troupe* with which he was associated. But, alas, A'Beckett was not long on the *Dispatch* before he was pronounced wanting in vigour and power. Once more adrift in conjunction with a humourist named Seymour, the *Figaro in London* was projected and produced. Original in idea, crisp and pungent in its articles and low in price, the *Figaro* soon obtained a great sale. Mr. A'Beckett became a popular writer, clearing a thousand a-year by this venture. The success of *Figaro* led A'Beckett very rapidly into numerous publishing schemes, which ultimately landed him in the Insolvent Court, a crisis arising from his utter ignorance of business matters. On the establishment of *Punch*, Mr. A'Beckett was employed upon it principally in parodying courtly and commercial announcements, and in burlesquing Blackstone's 'Commentaries.' This latter vein being found popular, the histories of Rome and England were laid under contribution, but in many quarters this invasion of the domain of history was sternly denounced as beyond the legitimate field of the humourist. About this time it was, he became connected with the *Morning Herald* and the *Times*. The bantering articles on the foundation of the British Association were understood to be from his pen. Called to the bar he made the acquaintance of Mr. Charles Buller, and by him A'Beckett was put on a commission for reporting on the poor laws and the poor. The able report which he produced on this occasion procured him an appointment as one of the metropolitan magistrates in 1849. This appointment gave rise to much cavil on the part of legal aspirants, and the *Morning Herald* denounced it in some severe leaders, understood to have been written by the late Samuel Phillips. Mr. A'Beckett's sagacity on the bench fully justified the appointment which he held with the utmost satisfaction to the public until his death. He died suddenly at Boulogne, in the autumn of 1856.

ABERCROMBY, SIR ROBERT, fifth baronet of Birkenbog and Forglen, in the county of Banff. Born 4th February, 1784, died at Forglen House, June, 1855.

ADAIR, SIR ROBERT, a diplomatist whose important services date in the time of Fox and Canning, born 1763, died in his ninety-third year, October, 1855. He was the last surviving friend of Charles James Fox. An interesting notice of his career will be found in the 'Gentleman's Magazine.'

ADAM, SIR CHARLES, a distinguished British admiral, died governor of Greenwich Hospital, 1853.

ADAMSON, JOHN, an antiquarian and man of letters, late treasurer and secretary of the Society of Antiquaries of Newcastle, 1787-1855.

AIKEN, ARTHUR, eldest son of the well known *litterateur*, and nephew to Mrs. Barbauld, was born at Warrington in Lancashire, 1778. He is the author of several works interesting to the naturalist, and was one of the founders of the Geological Society; died 1854.

ALEXANDER, ROBERT, a native of Paisley, distinguished as a journalist, chiefly as founder of the *Liverpool Mail*, 1795-1854.

ANCKLITZEN. See SCHWARTZ.

ANGLESEY, HENRY WILLIAM PAGET, marquess of, eminently distinguished as a cavalry officer, was born in 1768. His father was Henry, the first earl of Uxbridge; his mother, a daughter of the Very Rev. Arthur Champagne, dean of Clonmacnoise. In the early part of his career he bore the title of Lord Paget, but succeeded to his father's title in 1812, and was created marquess of Anglesey a few days after the battle of Waterloo. His noble spirit and military ardour was shown as early as 1790, when he raised among his father's tenantry the 80th regiment of foot, or Staffordshire

volunteers, at whose head, in 1794, he joined the duke of York in Flanders. In June of this year his talents for command and his gallantry were so well established, that he was appointed lieut.-colonel of the 16th light dragoons, and thus commenced his brilliant career as a cavalry officer. Though only twenty-six years of age, he took the place of Lord Cathcart, at the head of his brigade, during the temporary absence of that officer. In 1799, he accompanied the duke of York to Holland, and among other deeds of valour completely routed General Simon, whose force amounted to seven squadrons, while Lord Paget commanded only one. On this occasion he took five of the enemy's cannon, besides recovering some of our own pieces. From this period till 1808, Lord Paget devoted himself to the discipline of his regiment, the 7th light dragoons, and towards the close of this year was ordered into Spain to strengthen the forces of Sir David Baird, who was then advancing through Galicia, to effect a junction with Sir John Moore. It was now, in the famous retreat upon Corunna, and the final battle, that the noblest qualities of the soldier were displayed in the indomitable courage and discipline of Lord Paget's troops, and the spirit of chivalry he infused into them; for the retreat was covered by a series of fights, in which the generosity and knightly courage of the middle ages were hardly less prominent than the word of command. In 1809 Lord Paget returned to England, and his next appearance on the battle-field is at Quatre Bras and Waterloo, as earl of Uxbridge. It is impossible, in the narrow space at our command, to do justice to his achievements at this crisis of the world's fate. The cuirassiers were deemed invincible. 'Twice,' one of his biographers relates, 'had the gallant earl led the guards to the charge, cheering them with the rallying cry of, "Now for the honour of the household troops!" when three heavy masses of the enemy's infantry advanced, supported by artillery, and a numerous body of cuirassiers. This formidable force drove in the Belgians, leaving the Highland brigade to receive the shock. At this critical moment Lord Uxbridge galloped up to the second heavy brigade, under the command of Sir William Ponsonby, when the three regiments were wheeled up in the most masterly style, presenting a beautiful front of above thirteen hundred men. As the earl rode down the line, he was received by a general shout and cheer from the brigade. Then placing himself at their head, they made the most rapid and destructive charge ever witnessed. The division they attacked consisted of upwards of nine thousand men, under Count d'Erlon. Of these, three thousand were made prisoners, and the rest killed, with the exception of a few hundred men, who formed themselves under cover of the cuirassiers. After this, his lordship bravely led the same troops in several other brilliant attacks, cutting in pieces whole battalions of the old French guard, into whose masses they penetrated.' The earl was carried through these dangers without injury, but was struck in the knee by almost the last shot of Waterloo; in consequence of which his leg had to be amputated. A few weeks, however, saw him convalescent again, and, besides the honours which he received on his return home, a pension of £1,200 a-year was awarded him, which he nobly declined. His later years were chiefly devoted to the public service as master of the ordnance, except that he was viceroy of Ireland in the tumultuous period of O'Connell's ascendency. In 1842, he left his old companions in arms, the 7th light dragoons, and assumed the command of the roya. horse guards; four years later he was honoured with the rank of field-marshal. Died April 29, 1854. [E.R.]

ARAGO, Dominique-Francois-Jean, an eminent French mathematician and astronomer, born 1786; died 1853. — This remarkable man was born in the village of Estagel, near Perpignan, in the department of the Eastern Pyrenees, on the 26th of February, 1786. His father was a licentiate of law, and the owner of as much property in land, vineyards, and olive plantations, as enabled him to support in comfort a numerous family; but the family itself was of Spanish descent, and the future philosopher inherited with his birth the passions of the south. His elementary education was received at the communal school of his native place; but on the removal of his father to Perpignan, he was sent to the college of that ancient city, where he followed the course of instruction pursued in the French academies of that time, which did not include the learned languages. His tastes, he tells us (*Histoire de ma Jeunesse*), were at this early period purely literary, and the development of his latent mathematical faculties he owed to an accidental meeting with a young officer of engineers, who was engaged in superintending the repairs of the ramparts of Perpignan, and who inspired him with a passion for a military life. Learning from his new friend that he had been a pupil in the Polytechnic school, and that a severe mathematical examination was required for admission into that establishment, he determined henceforth to cultivate the mathematics, which he did with so much zeal and success that in eighteen months he mastered the subjects contained in the programme of admission; and having passed with credit the preliminary examination, which was conducted by the celebrated Monge, at Toulouse, he entered the Polytechnic towards the end of 1803, carrying into it, he assures us, a more profound knowledge of analysis than most of the pupils contrived to carry out of it. During the next three years his progress must have been very great, for we find that, in 1806, he was appointed one of the secretaries to the Board of Longitude, and that he was shortly afterwards associated with M. Biot in the measurement of an arc of the meridian in Spain, a national undertaking which had been suspended by the death of M. Mechain, to whom it was originally confided. He still indulged the hope of following a military career under the immediate patronage of Marshal Lannes, but a different and more congenial destiny awaited him, and the Spanish expedition, which consumed three years at the most critical period of his life, first postponed the realization of his early hopes, and finally frustrated them. Biot having returned to Paris, and war having broken out between France and Spain, Arago's position in a hostile country became one of extreme danger from which he was only extricated by his own courage and dexterity. Perched on the summit of a lofty mountain, on which during the day he used his geodetical in-

struments, and at night lit a signal fire, he was suspected by the Spanish peasantry to be a spy who was communicating by telegraph with the invading army. He was obliged, therefore, to make his escape as speedily as possible, which he did in the disguise of a Catalonian mountaineer, proceeding, with his instruments and papers, to Majorca, where he found shelter in the fortress of Belver. There he completed his geodetical calculations, and remained till the political fermentation on the neighbouring continent extended to Majorca, and rendered his further stay in that island unsafe. His only way of regaining France, however, was by proceeding, in the first place, to Algiers, and thence embarking in an Algerine vessel destined for Marseilles; but this vessel, when within sight of her port, was captured by a Spanish privateer, and the philosophical voyager sent as a prisoner of war to the fortress of Rosas, and afterwards to the hulks at Palamos. After a detention of several months, and undergoing many hardships and indignities, he was liberated by the Spanish authorities, and allowed, with his Algerine companions, to proceed on his voyage to Marseilles; but a storm arose, the vessel was driven off the French coast and towards Africa, and her passengers landed at Bougia, whence M. Arago proceeded on foot to Algiers. After much delay, and some risk, the French consul procured a passage for him in a French vessel bound to Marseilles, where he arrived safely, on the 2d of July, 1809, after having been chased by an English ship of war. The reappearance of the missing philosopher in France, under circumstances so unusual, created a strong sensation in the scientific world. Among its other results it led to the formation of a friendship between Arago and Alexander Von Humboldt, which only ended with the death of the former: while it also brought to the hero of such strange adventures a rapid accumulation of honours. On the death of the astronomer Lalande, he was elected, in September, 1809, a member of the Academy of Sciences, and shortly afterwards he was appointed one of the professors of the Polytechnic school, and director of the imperial observatory, in which he ever afterwards resided. In 1830, on the death of M. Fourier, he was chosen perpetual secretary of the Academy; and in 1834, he visited Great Britain, where he was received with the respect due to his eminent personal and scientific character. The rest of his life would seem to have been spent wholly in France, and chiefly in Paris, where he occupied the highest social place that a man of letters can attain to, though the warmth of his nature led him into some troubles which a man of calmer temperament would have avoided In political sentiment Arago was an ardent republican, but his integrity was respected by the heads of the different dynasties, imperial and royal, under which he lived. His strong political predilections, however, involved him in connections unfavourable to the calm pursuit of knowledge, and the consequences have always been regretted by those who knew how little fitted he was by previous habits for the successful management of political affairs. He took a conspicuous part in the revolutionary movement of 1848, and his appointment by the provisional government of that year to the double office of war and marine excited some merriment at the expense of the aged philosopher, who was certainly not in his right place at the head of the army and navy departments. The sanguinary contest in the streets of Paris, in June, shocked the sensibilities of a humane man, and dissipated many fond illusions which he had till then indulged, nor did he ever recover from the impression which that terrible scene made upon him. An insidious malady (diabetes) which had begun about this time to manifest itself was aggravated by mental suffering, and the last vestiges of political hope that clung to him being extinguished by the *coup d' etat* of December, 1852, it became obvious that his physical strength was rapidly declining under the combined pressure of bodily infirmities and disappointed hopes. He refused to take the oaths to the new government; but a formal exception was considerately made in favour of a man who had deserved so well of France. Dropsy of the chest having succeeded to the disease he was originally afflicted with, he became gradually weaker, though his mind remained clear to the last; and notwithstanding the skill of his physicians, and the affectionate solicitude of his family, he died tranquilly, but somewhat suddenly, on the 2d of October, 1853. The leading points in the intellectual character of M. Arago would seem to have been, vigour of apprehension, facility in acquiring knowledge, and a happy power of discrimination in its application. To these qualities he added that pure enthusiasm without which no excellence can be reached, and habits of application which only a robust frame could have borne. He has been called the busiest man of a busy age, and it is reported of him that he considered every man idle who did not work fourteen hours a-day! while the range of his own knowledge, which was immense, shows that he did not recommend to others what he did not himself practise. 'The number and variety of M. Arago's labours,' says the venerable Alexander Von Humboldt, 'on the physical constitution of the heavens and the earth will make it a very difficult task to write his life. In all these labours, we find the same penetration and the same anxiety for the advancement of science, and the same temperance in his conjectures.' His writings are so numerous that it is quite impossible to give a list of them in a sketch like the present; but Baron Humboldt has arranged the subjects which he treated under the following heads:—1. literary and biographical; 2. astronomical; 3. optical; 4. electro-magnetical; 5. meteorological and atmospherical; 6. physical geography. The *Eloges* which he wrote, in his capacity of secretary to the Academy, are those of Volta, Dr. Thomas Young, Baron Fourier, James Watt, Carnot, Condorcet, Bailly. Of these, that on James Watt is the only one that has yet appeared in an English dress. A complete edition of his works in French, of which the first six volumes have been already printed, is in course of publication in Paris; and there can be no doubt that, when completed, they will constitute the most fitting monument that could be raised to the memory of one of the most distinguished scientific men that France has produced in the present age. [J.M'C.]

ARBOUIN, James, a merchant of London,

author of a much admired treatise on the Regenerate Life, 1742-1822.

ARNAUD, MARSHAL DE ST., late commander-in-chief of the French forces in the Crimea, was born at Paris of humble parentage in 1801, and first distinguished himself in the wars of Algeria, where he went in 1836. After the most brilliant services in the field, and the devotion of his talents to the task of colonization, he was appointed, in 1850, governor of Constantine, and in 1851 he subdued the Kabyles at the head of only 6,000 men. He then returned to France, and was appointed commander of the 2d division of the army of Paris, and minister of war. His career in the war with Russia is well known. On the 26th Sept., 1854, he was attacked by cholera, and being already weakened by disease, he died three days afterwards on the voyage to Constantinople.

ARNOLD of MELCHTHAL. See WINCKELRIED.

ARNOTT, DR. ARCHIBALD, was born in 1771. Dr. Arnott entered the army about the age of twenty, and retired from active service in 1826. During the principal period of his career, he was attached to the 20th foot, sharing the perils and exploits of that regiment on the Nile, in Calabria, Portugal, Spain, and Holland, earning a medal with clasps for Egypt, Maida, Vimiera, Corunna, Vittoria, the Pyrenees, Nivelle, Nive, Orthes, and Toulouse. After the war, Dr. Arnott accompanied his regiment to St. Helena and India. At St. Helena he became the medical attendant of Napoleon Buonaparte. Arnott's professional ability, ingenuous character, and upright and dignified deportment as an officer, and gentleman, at once secured for him the confidence and esteem of the emperor. Shortly before his dissolution, Napoleon gave Dr. Arnott a signal testimony of appreciation of his services. As the emperor lay on his death-bed, he caused a valuable gold snuff-box to be brought to him; and with a last effort of departing strength, he engraved the letter N with a penknife upon the lid, and presented it to Dr. Arnott. Napoleon also bequeathed to the Doctor 12,000 francs, and the British Government, to mark its approbation of his conduct, granted him £500. Napoleon expired with his right hand in that of Dr. Arnott. The Doctor's masculine and tenacious memory was richly stored with recollections and anecdotes of that momentous period, yet, with the exception of a very clear and distinct 'Account of the Last Illness, Decease, and *post mortem* Appearances of Napoleon Buonaparte,' published in 1822, he could never be induced to write on the subject. Latterly, Dr. Arnott retired to his native parish, and died on his patrimonial estate, Kirkconnel Hall, 6th July, 1855.

ARUNDALE, FRANCIS, an architect and antiquarian, 1807-1854.

ASTRAMPSYCHUS, a Greek author of the lower empire, whose Iambics are printed with Rigault's edition of Artemidorus.

B

BAGOT, RICHARD, late bishop of Bath and Wells, was born in Northamptonshire, 1782. In 1803 he graduated at Oxford, and in 1806 was presented by his father, William, first Lord Bagot, to the rectory of Leigh in Staffordshire. The year following he moved to Blithfield and became canon of Windsor. In 1817, he was appointed a canon of Worcester; in 1829, was consecrated bishop of Oxford; and in 1845, succeeded Bishop Law in the see of Bath and Wells. Two remarkable circumstances render his bishopric a memorable one—the cessation of the 'Tracts for the Times,' in obedience to his mandate as bishop of Oxford, and the attack made upon him in the House of Commons by Mr. Horsman, for inducting the Rev. Mr. Bennett into the living of Frome. Soon after the latter occurrence symptoms of mental aberration appeared, and the affairs of his diocese were administered, in accordance with an act of parliament obtained for the purpose, by the Bishop of Gloucester and Bristol. Died May 15, 1854. [E.R.]

BANKS, THOMAS CHRISTOPHER, a remarkable writer on the genealogy of the peerages, was created baronet of Nova Scotia by the pseudo earl of Stirling, 1760-1854.

BARBER, CHARLES, a distinguished artist and associate of the literati of Liverpool; late president of the Liverpool Academy, died 1854.

BARCLAY, CAPTAIN, the famous pedestrian; was descended from the same ancient family as the author of the 'Apology' for the Quakers. He was born in Kincardineshire, 1779, and performed his great feats in pedestrianism about the commencement of the present century. He was a claimant for the earldom of Monteith and Airth, in right of his mother, from whom he took the family name of Allardice. Died 1854.

BARTLETT, WILLIAM HENRY, an accomplished artist and traveller, author of numerous finely embellished works. Died on his passage from the East, 1809-1854.

BATHORI. See STEPHEN, king of Poland.

BATTISTA. See MANTOVANO.

BEAUFORT, HENRY SOMERSET, seventh duke of, born 1792; served on the staff of the duke of Wellington in the Peninsular war; member for the borough of Monmouth from 1815 to 1832; junior lord of the admiralty, 1816-1819; succeeded to the dukedom, 1832; died 1854.

BELL, CHRISTOPHER, a Brit. adm., 1784-1854.

BELL, CURRER. See BRONTE.

BELLEW, SIR MICHAEL DILLON, Bart., of Mount Galway. Born 29th September, 1796, created a baronet in 1838, died in 1855 at his family seat.

BELLOT, JOSEPH RENE, a lieutenant of the French navy, whose noble devotion in the search for Sir John Franklin has endeared his name to England, was born in Paris, 1826, but generally called himself a Rochefort man, in consequence of his removal to that city when about five years of age. He studied in the college of Rochefort till his sixteenth year, when he was removed to the Naval School under public patronage, and in the course of two years began his career of active service on board the Suffren. In the same year, 1844, he was removed successively to the Friedland and the Berceau, and sailed in the latter of these vessels to the coast of Africa. Here, in the summer of 1845, Bellot distinguished himself in the expedition against Tamatave, and received the cross of the legion of honour on the recommenda-

tion of his commander, Capt. Romaine Desfosses. From the Berceau, which was afterwards lost, he removed to the frigate Belle Poule, the commodore's ship on that station, and, besides superintending the signals, found time to give a course of lectures on geometry and navigation, to such of the crew as desired it. Soon afterwards he returned to France, and was almost immediately promoted (Nov. 15, 1847) to the rank of *Enseigne de Vaisseau*, being now in his twenty-first year only; and in this capacity he shipped at first in the Pandore, and then in the corvette Triomphante, which sailed for the Plate River, July 23, 1848. In this cruise again his commander, Captain Sochet, spoke of him as an officer of the highest promise; and having returned to Rochefort in August, 1850, he was soon afterwards appointed to convey troops to Cherbourg in a small transport vessel which he commanded for a month. This service closed his career in the French navy, for it was in the spring of 1851 that he began to solicit his government for leave to take part in the expedition then preparing by Lady Franklin. His biographer remarks that Bellot was *passionally* a voyager; and his journals prove the correctness of the observation, for they are marked by all the enthusiasm of discovery, and scorn of danger that we find in the old voyagers, but he was also animated by a chivalrous admiration of Lady Franklin, and a sympathy for her loss; nor must we omit a desire to add to the glory of his country by planting the French flag, and conferring the names of Frenchmen, for the first time, on arctic lands. His request being granted, Bellot sailed in the Prince Albert, a brig of 50 tons, commanded by Mr. Kennedy, which left Aberdeen on its second voyage to the Northern Seas, in May, 1851, and returned in the year following. In this interval the young adventurer made an important geographical discovery in the course of a journey of at least 1,100 miles over the ice, accomplished under great difficulties; he found, in short, that Boothia Felix was separated from the land of Somerset by a narrow arm of the sea, now called Bellot Strait. While absent also, he had been honoured with the rank of lieutenant in the French service. On his return, Lieutenant Bellot memorialized his government, and urged the importance and humanity of an expedition to the Polar Seas, but before any decision could be arrived at he requested and received permission to sail with Captain Inglefield in the Phœnix, which left Woolwich, accompanied by the Breadalbane, in May, 1853. On the 21st of August, he volunteered to carry a communication across the ice, and a gale coming on, the ice was parted from the shore and drifted away with the current in a storm of snow and wind. Bellot perished, and the Breadalbane was wrecked in the same gale. [E.R.]

BERANGER, Pierre Jean, the Burns of France, was born at Paris, August 19, 1780, at the house of his grandfather, a Parisian operative tailor. Neither father nor mother seem to have had much to do with the education of the future poet. His father, a native of Flamicour, near Peronne, was constantly aspiring during a life full of adventure to attain a more elevated condition than that in which he was born; but unfortunately he wanted the perseverance necessary to insure success in his ambition, being, in point of fact, rather too much addicted to tracing the greatness of his ancestry ever to achieve his own. It was therefore to his grandparents that Beranger owed his first principles and impulses. With them he lived until his ninth year, and while under their roof, witnessed the taking of the Bastile. Forty years afterwards he celebrated the event within the prison *De la Force*. Before young Beranger had reached his tenth year, he quitted Paris for Peronne, where he was consigned to the care of a paternal aunt, who kept an inn in the suburbs of that town. The aunt was a stern disciplinarian, and though his services as pot-boy left the future poet but little leisure for reading, nevertheless it was under her roof that Beranger first made the acquaintance of Telemachus, Racine, and Voltaire. At the age of twelve he was struck by lightning in her house. So soon as he recovered from the severity of the shock, his first words were a sneer at the expense of the old lady. At the commencement of the storm Beranger had observed his aunt sprinkling her house all over with holy water. 'Pray, what good,' said he, 'has all your holy water done?' At the age of fourteen he was apprenticed to one Laioné, a printer. In this employment he began to learn the rules of orthography and language. But the school which contributed most to his intellectual and moral development was the *School of Primary Instruction*, founded at Peronne by M. Bellue de Bellanglis. An enthusiastic admirer of Rousseau, M. Bellue had designed an institution for children according to the maxims of the citizen-philosopher. The exercises which the discipline of the school necessitated Beranger to compose, formed his style, awakened his taste, extended his knowledge, and directed his attention to public affairs. From this school he returned at the age of seventeen to his father at Paris; and about this time the first idea of making verses dawned upon him. Molière and La Fontaine were his favourite authors; he studied their fine and minute points of observation, their verse, their style, and through this study arrived at something like a just conception of his own proper talent. Days of darkness and adversity quickly succeeded. From the depths of his poverty Beranger conceived the idea of possibly interesting M. Lucien Buonaparte in his position, so, gathering up his songs, he sent them, together with a letter revealing his circumstances, to the brother of the First Consul. Lucien Buonaparte, ever ready to succour struggling genius, gave to Beranger the most generous recognition and the most substantial assistance. Subsequently, through the interest of M. Arnault, Beranger obtained an appointment to an office in the University, which he held for twelve years. In 1821 he was dismissed from this appointment on account of his political sentiments. His works have been collected and published at six successive times—in 1815, in 1821, in 1825, in 1828, in 1833, and in 1847. The collection published in 1821 was prosecuted, and though defended by M. Dupin, senior, cost the author three months' imprisonment; the edition of 1828 was also prosecuted, and for it Beranger endured a captivity of nine months. The poet was also tried for reprinting some of the obnoxious songs in the account of his trial. At the revolution of 1848 Beranger was chosen a deputy to the National

the best of his airs and glees, the words are followed and set with taste. His treatment of the opera was simple and clear—neither feeble nor thin—always appropriate, often elegant, and generally effective. There is music in "The Slave," "The Miller and his Men," "Guy Mannering," "Maid Marian," "The Virgin of the Sun," "The Englishman in India," and half a score beside of his operas—there are settings by him for one and two voices of Shakspeare's choicest words—delicate, melodious, and English enough to make us express our regret that Bishop never comprehended his own strength, or his own responsibility, as a master and an inventor.' —Sir Henry R. Bishop was improvident; he died without leaving provision for the future of a son and daughter—twins—without even providing for their education. In the last weeks of the composer's life, means were set on foot to provide for the close of his life by a public performance, and a subscription which might assist in rearing his children during the tender years of their infancy, but he died before the fruits of the benevolence of his fellow-artists came to ripeness. — The *Musical World* of May 5th, 1855, had an article on the musical genius of Sir H. R. Bishop, from which we extract the following passage:— 'His death has left a gap which we look in vain to see filled up. That we have had, and still have, more accomplished and learned musicians, is unquestionable; but that we ever could boast, with the single exception of Purcell, a composer so individual, and so identified with the sentiment of English national melody, is equally doubtful. Bishop was not merely genuine; he was prolific, and produced a great many things that are likely to endure as long as the art itself, which, after all, can be said of few composers. The melody of Bishop was a pure and flowing spring that had its source in nature, and was therefore a gift from above. His tune was varied and abundant. His vein of melody, as in the instance of far greater masters than himself, seems to open without an effort. Nothing forced, exaggerated, or otherwise ungenial, was to be traced in his productions —we allude of course to his best, to the good grain — from which time has sifted the chaff' On the 8th of April, of the same year, the *Times*, in an appeal to the public in favour of Sir H. R. Bishop, says,—'No English musician has composed so much and so well as Henry Bishop; and probably none has produced so many things likely to endure. In every house where music, more especially vocal music, is a welcome guest, the name of Bishop has been, and must long remain, a household word. Who that has been soothed by the sweet melody of "Blow, Gentle Gales," charmed by the measures of "Lo! Here the Gentle Lark," enlivened by the animated strains of "Foresters, Sound the Cheerful Horn," touched by the sadder music of "The Wind Whistles Cold,"—who that has been haunted by the insinuating tones of "Tell me, my Heart," "Under the Greenwood Tree," or "Where the Wind Blows," which Rossini, the minstrel of the south, was wont to love so well—who that has felt sympathy with "As it fell upon a day, in the merry month of May," admired the masterpiece of glee and chorus, "The Chough and Crow," or been moved to jollity at convivial feasts by "Mynheer Van Dunk," the most original and genial of comic glees, will not be grieved to hear that the inventor of them all, with so many more of equal merit and beauty, is in sickness and distress, without money, and no longer able to toil for it, deprived of ALL that should accompany old age?'—The performance which was got up for his benefit yielded a considerable sum of money, but he did not live to enjoy any portion of the receipts. After the demise of Sir Henry, the subscription which was commenced for the benefit of himself and his children remained open for a considerable period, and various sums, from £25 downwards, were contributed by amateur noblemen, professional gentlemen, and others. We may mention, in passing, that the Covent Garden theatrical fund, and the firm of Broadwood and Sons, contributed each £50. There is therefore good reason to hope that the young children of the eminent artist and composer will be provided for during their nonage, and that they will be furnished with an education sufficient to carry them respectably through life. [J.M.]

BLACK, JOHN, late editor of the *Morning Chronicle*, was the son of a cottager, and was born near Dunse, in Berwickshire, 1783. He commenced life as an errand-boy, and, like many literary men who have risen to celebrity, devoted his early years to self-culture under no ordinary difficulties. At the age of twenty-seven, he walked to London with three halfpence in his pocket, but with an introduction to Mr. Perry, editor of the *Morning Chronicle*, who engaged him as reporter. In 1821, he had risen to the post of editor, which he retained till 1844, when he retired from active life. Died in June, 1855.

BLANQUI, JEROME ADOLPHE, one of the most distinguished publicists of France, born at Nice, 1798, died at Paris, Jan. 28th, 1854. His ablest work is entitled 'Cours d'Economie Industrielle.' M. Blanqui travelled many years in foreign countries, England, Italy, Germany, Austria, and Servia, to study and compare the different processes of industry and social economy, the results of which he has embodied in his works.

BLOMFIELD, CHARLES JAMES, late bishop of London, was born on the 29th May, 1786, at Bury St. Edmunds. From his father, who was a teacher there, he received his earliest education. But it was at the grammar school of his native place, where he spent some ten years, that he acquired the rudiments of that scholarship which afterwards secured for him at Cambridge the distinction of third wrangler, senior medallist, and a fellowship at Trinity college, together with Sir William Brown's gold medal for the Latin and Greek ode. Charles James Blomfield, though the son of poor parents, was fortunate enough to obtain the patronage of the marquis of Bristol and the second earl Spencer. With such ability and such patronage, his preferment in the church to which he had devoted himself was unusually rapid. At the early age of thirty-eight he was elevated to the bishopric of Chester, and four years afterwards to the see of London. During the quarter of a century which he held that conspicuous position he was universally recognized as the most eminent member of the episcopal bench. The disposal of the ample preferment in his gift was never prostituted to the objects of nepotism nor to the bias

of his political opinions. Bishop Blomfield was a firm supporter of High Church principles, and was one of the prelates who entered their protest against the elevation of Dr. Hampden, bishop of Hereford, to the episcopate. His lordship was known among scholars by his admirable editions of Æschylus and Callimachus. The best friends of his school and college career were those of his ripest years. The store of his reading and the fund of his anecdotes diffused a charm over the society of every circle which he entered. The enjoyment of his mental powers was preserved to the close of his existence; his last act of consciousness was an act of prayer. He died in 1857.

BLUNT, JOHN JAMES, regius professor of divinity in the university of Cambridge; author of a 'Sketch of the Reformation of the Church of England' and other works, 1794-1854.

BOXER, EDWARD, rear-admiral of the White, late commander of the port and harbour of Balaklava, was a native of Dover, born 1783. He entered the service in 1798, and was some time in the flag-ship of Lord Collingwood. In 1840, he was engaged on the coast of Syria, and took part in the operations against St. Jean d'Acre. Died of cholera on board the Jason, June, 1855.

BOXER, JAMES MICHAEL, nephew of the preceding, and a lieutenant in the royal navy, died at Balaklava of cholera a few days before his uncle, 1855.

BOYD, DR. JAMES BOYD, was born on the 24th December, 1795, at Paisley, where he received the elements of his education. At the university of Glasgow he particularly distinguished himself in the classics. After taking the degree of M.A., he devoted himself to the study of medicine. Renouncing this pursuit, he became a student of theology, and in 1822, having completed his theological curriculum, was licensed as a preacher of the gospel. In 1825 he was elected house governor of Heriot's Hospital, Edinburgh. In 1829 his Alma Mater testified its sense of his merits by conferring upon him the title of Doctor of Laws; and in August of that same year he was appointed by the town council of Edinburgh to the classical mastership of the High School,—a situation which he held for the long period of twenty-seven years. As a scholar he possessed great critical acuteness, unusual variety, exactness of knowledge, and extreme refinement of taste. His labours in the field of classical and general editing were extensive and successful. In 1834 he prepared for the press an improved edition of Adam's 'Roman Antiquities,' which has been fifteen times reprinted. He subsequently edited Potter's 'Grecian Antiquities;' Anthon's 'Sallust,' with additional notes and examination questions; Anthon's 'Select Orations of Cicero,' with additional notes; and last, but not least important or meritorious, Bishop Porteous's 'Summary of the Evidences of Christianity,' with definitions, synopses, and examination questions, supplied by the editor. Dr. Boyd died at his house, George square, Edinburgh, on the 18th August, 1856.

BOYLE, RIGHT HON. DAVID, a distinguished Scottish lawyer, born 1772, appointed president of the court of session in 1841, died 1853.

BRAHAM, JOHN, one of the most distinguished vocalists that ever adorned the English stage, was born in 1777. He made his *debut* at the age of ten, and continued his long and brilliant career as a singer until a few years from his death. He was the composer of several popular operas, among which may be mentioned the 'Cabinet.' Braham died in 1856.

BRAYLEY, EDWARD WEDLAKE, F.S.A., an antiquarian and miscellaneous writer, whose numerous works are spread over the first quarter of this century, was born in Lambeth, 1773. In 1825 he became librarian to the Russell Institution, which office he continued to hold till his death in 1854. Among the most valuable of his works may be mentioned 'History and Antiquities of the Abbey Church of St. Peter, Westminster,' 'Londiniana, or Reminiscences of the British Metropolis,' and 'The Beauties of England and Wales,' the latter a work in 11 vols.

BRITTON, JOHN, architectural and archæological writer, was born 7th July, 1771, at Kington St. Michael, in Wiltshire. During a long and honourable career he did good service in extending the study of British architecture and topography, and improving the public taste and feeling for natural antiquities. Mr. Britton died on the 1st Jan., 1857.

BROCKEDON, WILLIAM, remarkable at once as an artist and inventor, was the son of a watchmaker, and was born in Devonshire, 1787; died 1854. His principal literary works are 'Italy, Classical and Picturesque,' fol., 1842-1843, and 'Egypt and Nubia,' 3 vols. fol., 1846-1849. The most admired of his paintings is a portrait of his son, 'A Student at King's College.'

BROKE, CHARLES ACTON, commander in the royal navy, was the son of Admiral Broke, who commanded the Shannon in the famous action with the Chesapeake. His services were chiefly in the Mediterranean, of late years as signal master in the citadel of Zante; died, aged thirty-seven, September, 1855.

BRONTE, MISS, the gifted and much lamented novelist, known first as Currer Bell, was the eldest of three sisters, daughters of the Rev. Patrick Brontë, vicar of Haworth. A volume of 'Poems by Currer, Ellis, and Acton Bell,' published in 1846, attracted little attention, but the appearance of 'Jane Eyre, by Currer Bell,' in October of the year following, took the critics by storm, and astonished the world of every-day novel readers by its sustained intellectual power, and proofs of original genius. Curiosity was at once excited to know more of the author, whose sex *de plume* disguised, as it was intended to do, her very sex; the critics, however, remained completely at fault, and the publication of 'Wuthering Heights' by her sister Emily (Ellis Bell), and of 'Agnes Grey' by her younger sister Anne (Acton Bell), did not tend to enlighten them. The veil was at length lifted under painful circumstances. Emily Brontë died of consumption in Oct., 1848, shortly after the publication of 'Wuthering Heights,' and in the early spring her sister Anne was attended to the same grave. The facts were stated by their surviving sister, Miss Brontë, in a new edition of 'Wuthering Heights,' published 1851, whose touching memorial and recognition of the genius of her sisters, may still be read in the preface. Meanwhile, in 1849, Miss Brontë herself had

published her second novel 'Shirley,' the scene of which was laid in the dales of Yorkshire; and in 1853, her third and last work 'Villette,' appeared. Want of space forbids the least remark on the genius displayed in these works, and their distinctive characteristics; it is enough to say that their own high merits, and the sympathy of all who read them for the gifted spirit whose life and character they epitomize, will far outlive any praise we could bestow upon them. The sad story of Ellis and Acton Bell has now to be repeated for their elder in years, as she undoubtedly was in genius and artistic skill. The hand of Miss Brontë after her bereavement was solicited by the Rev. Arthur Nicholls, a gentleman who acted as her father's curate, but the latter was unwilling that his only remaining child should be taken from him. At length it was arranged that their home should be formed under the old roof-tree, a new study was added to the parsonage, and the lovers were married in 1855. Three months later the bride's constitution gave way, and she sank rapidly from week to week till she breathed her last, on the 31st of May, 1855, happy in the consoling presence of her husband and her aged father. [E.R.]

BROTHERTON, Joseph, for nearly a quarter of a century M.P. for Salford, was the architect of his own fortune, the consistent advocate of liberal opinions, of benevolent character, a strict vegetarian and total abstainer, and much esteemed by all who knew him. Mr. Brotherton died suddenly on the 7th Jan., 1857, much regretted.

BROWN, James, an eccentric character of Durham, author of numerous pieces written in verse, which exposed him to much ridicule. He assumed the title of Baron Brown, in accordance with a fictitious patent of nobility sent to him; in consequence, it was waggishly stated, of his works having been the means of converting the Mogul Empire. His poems consisted for the most part of visions, prophecies, and rhapsodies suggested by some part of the sacred volume, of the contents of which he had an astonishing recollection. A portrait and memoir of this person is given in 'Hone's Every Day Book,' vol. ii. [E.R.]

BROWN, Samuel, M.D., was born at Haddington, February 23, 1817. Equally distinguished in literature and science, Dr. Brown gained, in the metropolis of his native country, a name second to none of the young men of genius who adorned the Scottish capital. His researches and experiments in chemistry attracted great attention. His apparent success in some elaborate processes for transmuting metals, almost led to the belief that the dreams of alchemy were about to be realized. Dr Brown's views on these subjects, as expounded and illustrated in lectures, commanded the admiration of scientific men before whom they were delivered, and gained him the friendship of Jeffrey, Chalmers, and others capable of appreciating scientific genius and eloquence. When the chair of chemistry was vacant by the death of Dr. Hope, Dr. Brown offered himself as a candidate, nor was he without considerable support; but the practical researches and published works of Dr. Gregory, together with the known failure of some of Dr. Brown's experiments, gave his opponent superior claims in the judgment of the electors. Subsequent to this event, he gave lectures, in conjunction with the late Edward Forbes, with whom kindred genius and scientific enthusiasm had brought him into association. In 1849, 'Galileo Galilei,' a tragedy, was published by Dr. Brown; a work exhibiting much of his peculiar genius. The leading Scottish Reviews were frequently enriched by his literary contributions: some of the finest papers in the *North British* were from his pen. Dr. Brown belonged to a family well known in Scotland. His grandfather was John Brown of Haddington, author of the Self-Interpreting Bible, and founder of circulating libraries. Dr. Brown died at Morningside, Edinburgh, in 1856.

BROWNE, Sir Thomas, author of the celebrated 'Religio Medici,' was a physician, the son of a merchant, and was born in London, October, 1605. He was educated at Winchester and Oxford, and pursued his professional studies according to custom, while travelling abroad in France, Italy, and Holland, taking his degree at Leyden. He began practice in the neighbourhood of Halifax, but removed to Norwich, where he died, on the anniversary of his birth-day in 1682, leaving a reputation which will endure, as Dr. Johnson expresses it, 'while learning shall have any reverence among men.' His 'Religio Medici' was first published without his consent in 1642, followed in the same year, on account of its many corruptions, by a genuine edition. In ten years, it had appeared in Latin, French, Italian, and German translations, and has ever since kept its place, at least as a curiosity, in the hands of the learned. This work has given rise to much controversy, and it figures in the 'Index Expurgatorius.' It is a subtle and argumentative production, but is far from being so absolutely paradoxical as it is sometimes represented, more especially in the second part, where the author sets forth his practical religion as the life of charity, and the love of God, in anticipation of Fenêlon; it ought to be remembered, also, that it was written, as the author declares, without a view to publication, expressing his 'Conceptions,' and containing many things that should be read in 'a soft and flexible sense.' It contains the 'Religion' of Sir Thomas Browne, so far as he really understood his own heart, and the subjects of which he treats in the more reasoning portion, may be taken as an *exposé* of his mental habits—his manner of considering difficulties, his way of dealing with paradoxes and mysteries. It is only in this light it can be read fairly. His greatest work, the 'Pseudodoxia Epidemica,' or 'Inquiries into Vulgar and Common Errors,' first published in 1646, has been frequently reprinted, and is still a text-book; it well deserves to be characterized in the words of Coleridge, who describes the author as 'rich in various knowledge, exuberant in conceptions and conceits, contemplation, and imagination.' The popular legends considered in this work, and the author's manner of dealing with them, are things as curious and entertaining in their way as anything in the pages of Pliny, though very different in the end of their narration; it was answered by Alexander Ross in 1647. The other works of Sir Thomas Browne are an account of 'Urn Burial,' and 'The Garden of Cyrus,' besides a number of Tracts and a vast mass of MSS., including his correspon-

dence with Evelyn, Dugdale, and others; these are preserved in the British Museum and in the Bodleian Library. A collected edition of his works, including Sir Kenelm Digby's 'Annotations on the Religio Medici,' appeared in 1686: a modern edition was published in 4 vols. 8vo, 1836. [E.R.]

BRUAT, Admiral, late commander of his country's fleet in the Black Sea, was born at Colmar in 1796, and obtained his first command in 1829, when his ship the Silene was wrecked on the coast of Africa. On this occasion he became a prisoner at Algiers, and was released when that city was captured by the French. In April, 1845, he was appointed governor of the Marquesas, and in April following of all the French establishments in Oceanica. In 1854, he became second in command of the squadron in the Black Sea, and succeeded Admiral Hamelin as first commander, when the latter returned home. He was present at the bombardment of Sebastopol, Oct. 17, and left for Toulon, Nov. 4th, 1855. Died on board the Ulm, in the roadstead of Messina, Nov. 25th.

BUCHAN, Peter, a Scottish antiquarian, disting. for his researches in ballad poetry, d. 1854.

BUCKINGHAM, James Silk, born in the village of Flushing, near Falmouth, 1786, was the son of a retired officer, formerly in the merchant service. In the age of Elizabeth one of his ancestors served in the fleet by which the Spanish Armada was discomfited, and a like adventurous career seems to have had irresistible attractions for all in his line of descent. Of seven children, James inherited the most of this passion, and his roving disposition and love of enterprise made him the frequent and favourite guest of Sir Edward Pellew, on board the Indefatigable. It is not surprising, therefore, that he went to sea while quite a child, but he had also, at the ripe age of ten, passed through the experience of a love adventure and been made prisoner; he was then, he tells us in his charming 'Autobiography,' considered a handsome boy, and as he lived to be a fine old man, the truth of this can hardly be doubted. In a few more years we find him settled with a bookseller in Devonport, and at fifteen he submitted to the manager of the theatre his tragedy, entitled 'The Conquest of Circassia;' presently, however, he left his master, went to sea in a man-of-war, and when tired of the service ran away in disguise, and gave his attention, for a year, to the study of the law. With all this diversity of pursuits he found time to fall in love, and, before he was twenty years of age had a wife to support: for which luxury, we may state, he had to pay in manual labour, and worked some time in London and Oxford as a compositor. At length the sea drew him again into the service of man on a larger stage, and he went as a naval officer to the West Indies, and finally to Calcutta, where he endeavoured to establish himself by setting up his printing presses and exposing the abuses of the Indian government;—of course, his presses were seized, and the wide world was still before our bold adventurer. We cannot, for want of space, follow him in his ensuing travels through the East, but the title of his works will afford some idea of their extent. In 1822, he published 'Travels in Palestine,' and 'Travels in Arabia;' in 1827, 'Travels in Mesopotamia and the Adjoining Countries;' in 1830, in 'Assyria and Media.' Meanwhile, in 1825, Mr. Buckingham had established in London 'The Oriental Herald,' and at a later period he travelled again,—this time far and wide on the American continent. He was now well known as a man of letters, an able lecturer, and an indefatigable projector of social and legislative improvements; and with the latter character as his special recommendation, he was elected member of parliament for Sheffield, and sat in the house from 1832 to 1837. No man, as it has been expressed, was more before the public in his day, and few, we think, have been more misrepresented. In 1843, he established a literary club in Hanover square, called 'The British and Foreign Institute;' its object being a social *ré-union*, in which persons of all nations might meet as on common ground, to enjoy literary society and promote certain public uses and reforms intimately connected with the progress of the age. This design was carried out with Mr. Buckingham's usual zeal till 1846, when the institution was dissolved, partly as a consequence of the scandalous attacks that had been made upon it in the pages of *Punch*. In his 'Address to the British Public,' Mr. Buckingham fully vindicated the honesty of his character, and enumerated, as follows, a few of the 'projects' which he had successfully accomplished:—1. Establishment of a free press in India; 2. Liberty of settling in India for all British subjects; 3. Power of purchasing lands by English colonists; 4. Establishment of trial by jury in India; 5. Abolition of the burning of widows; 6. Discontinuance of drawing revenue from idolatry; 7. Free trade for Englishmen with China; 8. Opening of the overland route to India; 9. Immediate emancipation of British slaves; 10. Establishment of temperance societies (Mr. Buckingham, we ought here to observe, was president of the Temperance League); 11. Providing public baths for the people; 12. Opening public walks and gardens; 13. Establishment of provincial museums; 14. Forming public cemeteries for interment without towns; 15. Allowance of an annual grant to Polish exiles; 16. Abolition of impressment for the navy; 17. Providing seamen's homes for the merchant seamen; 18. Formation of societies for the suppression of duelling; 19. Reduction of the tax on authors and publishers. Of course it is not to be supposed that these reforms were all alike accomplished by the unaided efforts of one man; but such were the projects with which Mr. Buckingham was busy in his lifetime, and their enumeration is interesting, as showing the measure of his sympathies, and the utility always aimed at in the diversity of his pursuits. Few men have led a more adventurous life and seen greater vicissitudes of fortune, preserving, at the same time, a constant effort to do good on the largest possible scale. His career is one which establishes (to use his own words when announcing his Autobiography) 'that there is no obscurity of birth, no privation of property, and no opposition, either of powerful individuals, or still more powerful public bodies and governments, that may not be overcome by industry, integrity, zeal, and perseverance;—no depth of misfortune from which the victim may not hope to emerge, by labour, economy, temperance, and that single-mindedness which regards the faithful discharge

of duty as the great object to which all others must be made subordinate.' Mr. Buckingham died June 30, 1855. [E.R.]

BUONAPARTE, CHARLOTTE JULIA, princess of Canino, eldest daughter of Joseph Buonaparte, king of Spain, and of Julia Maria Clary, sister of the present queen dowager of Sweden, the widow of Bernadotte. Born at Paris, 1802; married her cousin Charles, son of Lucien, prince of Canino, 1822; became princess by her husband's succession to his father's title, 1840; died 1854.

BURKE, JAMES, lieutenant in the royal engineers, memorable for his gallant bearing in the attack upon the Russian camp near Rustschouk, where he met the death of a hero, July 7th, 1854.

C

CAMPBELL, SIR JOHN, major-general, killed in the assault on the Redan fort, June 18th, 1855, was the son of Sir Archibald Campbell, commander in the first war with the Burmese. He was born in 1807, and was therefore in the prime of life when he fell. His first experience of war was obtained on the staff of his father, in the Burmese war; subsequently, he joined the 38th regiment, and served with it from 1837 to 1851, in the Mediterranean, West Indies, and Nova Scotia. In the year last mentioned he returned to England, and was appointed brigadier-general, on being sent to the Crimea; by a late brevet he became major-general. He fell gloriously, cheering on his men, and his body was found on the day following, close up to the abattis. His remains were interred at Cathcart's Hill. [E.R.]

CANDLISH, MRS., formerly Miss Jean Smith, the last of the six 'belles of Manchline' celebrated in the verse of Burns,—

> "Miss Miller is fine, Miss Markland's divine,
> Miss Smith she has wit, and Miss Betty is braw;
> There's beauty and fortune to get wi' Miss Morton,
> But Armour's the jewel for me o' them a'."

The husband of Mrs. Candlish was a medical man, and her son is the Rev. Dr. Candlish of Edinburgh.

CARBUCCIA, GENERAL, one of the commanders of the French army in the East, and a distinguished archæologist; died 1854.

CARLOS, DON, second son of Carlos IV., king of Spain, and grandson, by the mother's side, of Louis XV. of France, was born 1788. On the death of his brother, Ferdinand VII., in 1833, he disputed the succession to the throne, but was at length, in 1839, compelled to retreat into France. In 1845 he abdicated his pretensions in favour of his eldest son, Don Carlos Luis Conde de Montemolin, who has since married a sister of Ferdinand II., king of the Two Sicilies. Don Carlos died at Trieste, aged sixty-seven, March 10th, 1855.

CARLYLE, MRS., mother of the celebrated author, died 1854.

CARPENTER, R. C., an architect, 1812-1855.

CARTER, JAMES, an engraver, 1798-1855.

CARTOPHILUS. See SAINT-GERMAIN.

CATHCART, SIR GEORGE, lieut.-general, commanding the 4th division of the British army in the Crimea, was born in London, 1794, and commenced his military career in the 2d life guards, 1810. His experience of active warfare commenced after the battle of Borodino, in the grand army headed by the Emperor Alexander, who took the field in person, January, 1813. He was then a lieutenant in the 6th dragoons, and remained with the allied forces through all the following campaigns, and was present at all the great battles fought in Germany and France, and finally at the capture of Paris. After the peace of 1814, he accompanied his father, Lord Cathcart, to the Congress at Vienna, and from that city he took his departure for Brussels as extra aid-de-camp to the duke of Wellington. In this capacity he was present at Quatre Bras and Waterloo, and afterwards remained on the staff of the duke as full aid-de-camp. After many years of regimental service he had retired on half-pay, when the rebellion in Canada broke out, the events of which placed him in command of all the troops south of the river St. Lawrence. Six years he remained in Canada, and having returned home he again retired on half-pay; but his country still demanded his services, and, in 1852, he went out as governor and commander-in-chief at the Cape, where he at length brought the Caffre war to a conclusion. His return to England was only like a flying visit on his way to the Crimea, where his career is sufficiently well known. His fall at the battle of Inkermann is thus described by the correspondent of the *Times*:—'Sir George Cathcart seeing his men disordered by the fire of a large column of Russian infantry which was outflanking them, while portions of the various regiments composing his division were maintaining an unequal struggle with an overwhelming force, rode down into the ravine in which they were engaged to rally them. He perceived, at the same time, that the Russians had actually gained possession of a portion of the hill in rear of one flank of his division, but still his stout heart never failed him for a moment. He rode at their head encouraging them, and when a cry arose that the ammunition was failing, he said coolly, "Have you not got your bayonets?" As he led on his men, it was observed that another body of men had gained the top of the hill behind them on the right, but it was impossible to tell whether they were friends or foes. A deadly volley was poured into our scattered regiments. Sir George cheered them, and led them back up the hill; but a flight of bullets passed where he rode, and he fell from his horse close to the Russian columns. The men had to fight their way through a host of enemies, and lost fearfully. They were surrounded and bayonetted on all sides, and won their desperate way up the hill with diminished ranks and the loss of near 500 men. . . Sir George Cathcart's body was afterwards recovered, with a bullet wound in the head, and three bayonet wounds in the body.' Thus fell one of the brightest ornaments of the army—a man who was fitted for any command, and worthy of the highest honours. We ought to remark that the profession is indebted to General Cathcart for a volume of commentaries, published 1850, in which the strategy of Napoleon and the allies in 1813 and 1814 is compared, and the principal battles described. [E.R.]

CATHERINE, queen of Navarre, was the sister of Francis Phœbus, whom she succeeded 1483.

In 1484 she married John d'Albert, who was crowned king with her in 1494 at Pampeluna. She died a few months after her husband, after being despoiled of the government, in 1516.

CATHERINE HOWARD. See HOWARD.

CAVAIGNAC, LOUIS EUGENE, a French general and politician, son of the celebrated conventionalist of the name. His elder brother was an eminent republican, and suffered a prosecution for the active share he took after promoting the Revolution of 1830, in attacking the measures of Louis Philippe's government. While his brother was thus occupied in the arena of politics, the future general was serving in the army, which he entered on receiving a commission from the Polytechnic School. In 1828, he held a command in the French expedition to the Morea. Returning to France, we find him, in 1830, in garrison at Arras, where, as afterwards at Metz, he openly avowed his republican sentiments. In consequence of this declaration of his political opinions, he was sent to Africa, where he gained great distinction in the Algerine wars. In 1847, he succeeded Lamoriciere in the command of the province of Oran; and in the following year was promoted to the governor-generalship of Algeria. His rule in Algeria was distinguished by great firmness and judgment. While holding that important office he was chosen a delegate to the National Assembly for the two departments of Lot and Seine. Ancestral connection induced him to sit for Lot. On the 24th February, a decree of the provisional government made him General of Division, a second decree made him Minister of War. The latter post was, however, declined by him, because he was not allowed to concentrate in Paris such a military force as he wished to maintain. It was not long after this ere events showed the necessity of placing the supreme military command in the hands of a single individual. Cavaignac was in consequence appointed Minister of War, and at once entered upon his command. It was on the 23d of May, that the President of the National Assembly delivered to him the command of all the troops appointed to guard the chamber. The 23d of June saw the Parisians once more behind the barricades. Two plans for suppressing the revolt were proposed. The executive committee was for spreading the troops over the capital; Cavaignac's plan was the reverse of this, and consisted in concentrating his troops at certain points, and bringing them into action in large masses. The insurrections of July, 1830, and of 1848, had been treated by the existing governments as larger street riots, to be quelled in police fashion. Cavaignac treated the insurrection of June as the outbreak of a civil war, and met it in true order of battle. After four days' fighting in the streets, Cavaignac found himself the absolute disposer of the destinies of Paris and France, but, true to his republican principles, he laid down his dictatorship, like some ancient Roman, as soon as he had pacified the capital. The National Assembly, however, aware of the importance of his services, appointed him President of the Council, with power to nominate his own ministry. This position was held by him until the election of the President of the Republic. On laying down his extraordinary powers, Cavaignac received the thanks of the National Assembly, and the compliments of his successor. When Louis Napoleon executed his *coup d'etat*, one of his precautions was to arrest Cavaignac in his bedchamber. The General was, however, released after a brief detention; and has resided unmolested in Paris since that time, though, in common with other distinguished Frenchmen, he never acknowledged either the Dictatorship or the Empire. In July, 1857, Cavaignac was returned as one of the ten deputies to Paris, in opposition to the imperialist party. His sudden death, on the 30th October, 1857, has, however, taken from France one of the most patriotic of her sons, and one of the ablest of her generals. In cool, resolute daring, and in the utter absence of all love of display, Cavaignac more nearly resembled the duke of Wellington than any French general. Cavaignac was buried at Montmartre: some 15,000 of the people of Paris escorted his remains to their final resting-place. Among the mourners were the chief of his old political friends, who had emerged from their obscurity to do honour to their departed comrade.

CHALON, JOHN JAMES, a distinguished painter, chiefly of landscapes and marine pictures, died at an advanced age, November, 1854.

CHAPMAN, JOHN, memorable for his exertions in the cause of India, especially for the introduction of railways and the cultivation of cotton, died 1854.

CLAYTON, A. B., an architect, 1795-1855.

CLEMENCE, ISAURUS. See YSAURE.

CLINT, GEORGE, a painter and mezzotint engraver, remarkable for his theatrical and other portraits, 1770-1854.

CLONCURRY, VALENTINE BROWNE LAWLESS, Lord, of Cloncurry in Ireland, was born in Dublin, 1773, and educated for the bar. Towards the close of the century we find him identified with the movement party of his countrymen, a member of the Society of United Irishmen, and an associate of Curran, Grattan, Emmett, O'Connor, Lord Edward Fitzgerald, and George Ponsonby. In 1798 he was arrested on a charge of treason, but after several examinations before the Privy Council, he was liberated as 'imprudent rather than criminal.' Arrested again in 1799, he did not regain his freedom till 1801, and in the meantime, by the death of his father, had inherited the family title. From that time till the visit of George IV. in 1821, he remained at variance with the government, but was then graciously received by his Majesty, and lived to become a sworn member of the Privy Council. Died 1853. [E.R.]

COCHRANE, CHARLES, principal founder and president of the 'National Philanthropic Institution,' established in Leicester square for the relief of the unemployed poor, 1807-1855.

COCKBURN, SIR GEORGE, a distinguished British admiral, born in 1772, and honourably served his country from 1786 till the day of his death in 1853.

COCKBURN, HENRY THOMAS, known by his title, Lord Cockburn, as one of the lords of the court of session and a lord commissioner of justiciary, was born in 1779. He holds a brilliant place in the rank of barristers, and possessed remarkable power and eloquence as a special pleader. In political doctrines he belonged to the same

constellation of whigs as his friend Lord Jeffrey, whose life and correspondence he published, 1852. Died 1854.

COCKTON, H., author of 'Valentine Vox' and other contributions to light literature, 1808-1853.

CODRINGTON, Admiral Sir Edward, born 1770, entered the navy in 1783, and in 1794 was lieutenant on board the flag-ship of Lord Howe. From that time he took a distinguished part in many great actions, but his name is chiefly associated with the destruction of the Egyptian fleet at Navarino, October 20th, 1827. On this occasion the commands of the king are said to have been expressed in a sentence more pithy than dignified, —'Go it, Ned!' From 1832 to 1839 he sat in parliament for Devonport. Died 1851.

COLBURN, Henry, the well known publisher, projector of the 'New Monthly Magazine,' the 'Court Journal,' the 'United Service Magazine,' and the 'Literary Gazette.' Died 1855.

COLLYER, William Benjo, a distinguished theologian and popular preacher of the metropolis, was the son of a builder at Deptford, and was educated at Homerton. Died in his seventy-second year, 1854. His 'Lectures on Scripture Facts,' published in 1808, obtained for him the diploma of D.D. from the university of Edinburgh.

COLOMBIERE. See Vulson.

COLQUHOUN, James, known as the Chevalier de Colquhoun, distinguished as a diplomatist and writer on the civil law, 1780-1855. His father was the celebrated writer on the police system of the metropolis.

CONDER, Josiah, editor of the *Patriot* newspaper, was born in London, on 17th September, 1789. At an early age Josiah Conder manifested that poetical genius and literary taste which subsequently distinguished him. In 1814 he became proprietor of the *Eclectic Review*, being at that time a bookseller in London. In 1819 he disposed of the business to Mr. Holdsworth, and went to reside at Watford, in Hertfordshire, retaining in his own hands the management of the *Eclectic* till 1837, when Dr. Thomas Price became the proprietor and editor. During the twenty-three years of Mr. Conder's editorship of this monthly journal, he enjoyed the assistance either more statedly or more occasionally, of John Foster, Robert Hall, Dr. Chalmers, Dr. Pye Smith, Isaac Taylor, L. Uwins, D.D., Dr. Vaughan, Charles March, and many other literary celebrities. In 1818, Mr. Conder published a work on Protestant Nonconformity. In 1824 he entered upon an engagement to compile the 'Modern Traveller.' In 1832 Mr. Conder became editor of the *Patriot* newspaper, an office which he sustained with credit for twenty-three years. Mr. Conder died on the 27th December, 1855.

CONYBEARE, The Very Rev. Wm. Daniel, Dean of Llandaff, was born June 7, 1787. His father was rector of Bishopgate. The late dean was educated at Westminster, and afterwards at Christ Church, where, in 1808, he took a first class in classics, and a second in mathematics. At Christ Church, Conybeare was the associate of the late Sir Robert Peel, and is said to have been somewhat acquainted with the opinions of that eminent statesman, whom he used always to describe as a whig at heart. From Christ Church he proceeded to Oxford, and shortly after taking his degree there, he entered upon the study of that science with which his name is inseparably associated. It was in 1814 his first communication was made to the 'Transactions of the Geological Society,' of which body he was, if not the founder, at least one of the earliest members. In the study of the new science, he was associated with Buckland and Phillips. His first paper in the 'Geological Transactions' is a tract on the origin of a remarkable class of organic impressions occurring in the nodules of flint, in the course of which he establishes that these substances are not, as was supposed, fossil corals, but produced by the infiltration of siliceous matter into shells, the calcerous matrix of which has perished. Mr. Conybeare completed his geological labours by the publication, in conjunction with Mr. Phillips, of the 'Outlines of the Geology of England and Wales.' The work was regarded as a marvel of compilation, and has often been referred to as one of the most useful manuals on the subject ever published. Mr. Conybeare was for many years rector of Sully, in Glamorganshire. In 1831 he was elected vicar of Bristol College. During that and the two following years he delivered a series of lectures at the College, which were afterwards published, accompanied by an inaugural address on the Application of Classical and Scientific Education to Theology. Originality of thought, and charm of style, gave these lectures an unusual popularity. In 1836, Mr. Conybeare became vicar of Axminster, Devon. In 1839 he was appointed Bampton lecturer to the University of Oxford. In 1847, at the instance of Dr. Coplestone, then bishop, he was instituted to the deanery of Llandaff, resigning Axminster in favour of his eldest son. Here the last eleven years of his life were passed in the prosecution of his favourite studies, and in the zealous discharge of his professional duties. The loss of a son, the Rev. W. J. Conybeare, who promised to transcend in the world of letters, even the father's fame, is understood to have hastened the death of the venerable Dean of Llandaff, which took place on the 12th August, 1857, at Itchen Stoke, near Portsmouth.

COOK, W. B., an engraver, 1778-1855.

COOPER, Bransby, a distinguished English surgeon, nephew of Sir Astley Cooper, born in 1792, and at an early age entered the naval service, but being obliged to relinquish it from weak health, he embraced the medical profession. In 1812 he entered the royal artillery as surgeon, and gained great experience in the Peninsular war. He afterwards settled in London, was appointed demonstrator of anatomy at St. Thomas's Hospital, and published many valuable papers. He died in 1853.

COPELAND, Fanny. See Fitzwilliam.

COPELAND, Thomas, a writer on surgery and other medical subjects, 1781-1855.

CORRY, Armar Lowry, rear-admiral of the White, was born in 1793, and entered the naval service in 1805, under Capt. Sir H. Popham. He received his first commission, April 12, 1812, and sailed with Napier as second in command of the Baltic fleet, 1854. Died at Paris, May 1, 1855.

CORVINUS, John. See Hunniades.

COTTENHAM, Charles Christopher Pe-rys, earl of, formerly lord chancellor, was born

in 1781, and called to the bar in 1804. In July, 1831, he was returned to parliament through the interest of Earl Fitzwilliam; in 1834 became master of the rolls, and in 1835 was appointed, in conjunction with others, a commissioner of the great seal. In 1836, this high responsibility devolved on himself alone. He continued in office till 1841; resuming it again while the whigs held the reins of government, from 1846 to 1850. Died 1851.

COTTLE, JOSEPH, one of the earliest and most faithful friends of Coleridge, 1769-1853.

CRICHTON, REV. ANDREW, a Scottish divine, many years editor of the *Edinburgh Advertiser*, author and translator of many valuable contributions to history and biography. Died 1855.

CROKER, THOMAS CROFTON, whose name is identified with the fairy legends and traditions of the Celtic race, was the son of Major Croker, of the 38th regiment of foot, and was born at the house of his maternal grandfather, in Cork, 1798. He was a descendant of an old Devonshire family, some of whom had settled in the south of Ireland in the times of Elizabeth and Cromwell; and, notwithstanding his high connections, was educated for a mercantile life. He passed much time in the south of Ireland in the period 1812 to 1815, collecting the legends and songs of the peasantry; at the same time employing occasionally his talent for sketching; yet his first work, 'Researches in the South of Ireland,' did not appear till 1824. In the spring of the following year, he became renowned by the publication of his 'Fairy Legends,' to which he was indebted for the acquaintance of Sir Walter Scott, who met him with several other celebrities of the day at a breakfast party, at Mr. Lockhart's, in Pall Mall. The occasion is interesting, as it forms the subject of a notice in Sir Walter Scott's journal, who characterizes Mr. Croker as 'the author of the Irish Fairy Tales, little as a dwarf, keen-eyed as a hawk, and of easy, prepossessing manners, something like Tom Moore.' Other interesting particulars concerning this interview will be found in the 'Gentleman's Magazine,' vol. xlii., p. 452. It may be added, that the best published likeness of him is said to be in Maclise's 'Snap Apple Night.' It would exceed our limits to specify all the legendary and other amusing or learned works we owe to the subject of our notice; but we may briefly mention his contributions to the annuals, 'Daniel O'Rourke,' and 'Legends of the Lakes,' in which he was aided by the MSS. of Mr. Lynch. In 1832, he essayed his hand as a novelist, but was more himself in 1839, as editor of 'The Popular Songs of Ireland.' This year also he took part in the formation of the Camden Society, and, in 1840, was still more active in founding the Percy Society, both of which were benefited by his antiquarian knowledge and literary talents as editor. Died at his house in Brompton, after a short illness, August 8, 1854. [E.R.]

CROLL, FRANCIS, an engraver of Edinburgh, who was rapidly rising to eminence when he died, at the early age of twenty-seven, 1854.

CUDDY, LIEUT.-COLONEL, a gallant officer, killed while leading his men up to the Redan fort, September 8, 1855.

CUITT, GEORGE, an artist distinguished for his etchings, author of 'Wanderings and Pencillings amongst the Ruins of Olden Times,' 1779-1854.

CURTIUS, QUINTUS. See QUINTUS.

D

DACRE, BARBARINA BRAND, Dowager Baroness Dacre, chiefly celebrated for her dramatic writings, was born in 1757. Her father was the brave Admiral Sir Chaloner Ogle. Her works began to appear in 1821, and include translations from Petrarch. In 1831, she edited 'Recollections of a Chaperon,' and in 1835, 'Tales of the Peerage and Peasantry,' both written by her daughter, Mrs. Sullivan, the author of 'Ellen Wareham.' Died 1854.

D'AGUILAR, SIR GEORGE, lieut.-general in the British army, memorable for his services in the Chinese war, 1785-1855.

DARTMOUTH, WILLIAM, fourth earl of, distinguished as a liberal promoter of popular institutions; born 1784, succeeded to the peerage on the death of his father 1810; died 1854.

DAVID, M. D'ANGERS, the well known French sculptor, died at Paris at the age of sixty-five, Jan., 1856. He was a pupil, and nephew by marriage, of David the painter, and was an ardent republican, as shown by the long list of great names who did honour to his funeral.

DAVIES, GRIFFITH, F.R.S., a distinguished actuary, born at Caernarvon 1788, died in London 1855.

DAVY, LADY JANE, daughter of Charles Kerr, Esq., of Antigua, and widow of the celebrated Sir H. Davy, remarkable for her accomplishments and conversational powers, died 1855.

DAWNAY, THE RIGHT HONOURABLE WILLIAM HENDRY, seventh Viscount Down, born 15th May, 1812, died 26th January, 1857.

DE BIELKE, RODOLPH, an eminent Danish diplomatist, was the successor of Count Reventlow as charge d'affaires in this country, and is memorable for his services during the Schleswig-Holstein agitation, and the troubles of 1848. After leaving England, he became Danish minister at the court of Berlin, and from thence had retired to Italy to recruit his health, where he was seized with cholera, and was so greatly reduced that he died at Padua, July 26, 1855.

DE LA BECHE, SIR HENRY THOMAS, a distinguished geologist, at whose instance the Museum of Practical Geology was instituted, 1796-1855.

DEMAINBRAY, THE REV. S. G. F. T., one of the chief promoters of the allotment system, author of a pamphlet entitled, 'The Poor Man's Best Friend,' 1759-1854.

DENISON, EDWARD, late bishop of Salisbury, was born in London, 1801, and at the time of his appointment to the bishopric, March, 1837, held a small college living at Oxford. He was in favour of reviving the synodical powers of the church, and was remarkable for his sincerity and clearness of judgment. He is the author of several works, chiefly in practical religion. Died March 6, 1854.

DENMAN, THOMAS, Lord, born in London 1779, was the son of a physician distinguished by the patronage of the court, and grandson of a

country apothecary. His first teachers were Mr. and Mrs. Barbauld, then keeping school in Norfolk; his education was continued at Cambridge. In 1806, he was called to the bar; and in 1818, took his seat in parliament as member for Wareham; in 1820, for Nottingham. The same year, having boldly ranged himself with Brougham and the other advocates of popular rights, he was also appointed solicitor-general to Queen Caroline, the advocacy of whose cause left him proportionately out of favour with the court. In 1828, his star began to rise under favour of Lord Lyndhurst; and, at the period of the reform bill, his brilliant qualities, no longer under eclipse, carried him to office. At the close of that struggle, therefore, we find him, November 8, 1832, appointed successor of Lord Tenterden as lord chief justice of the King's Bench; soon after which he was made a privy councillor, and eventually, in 1834, raised to the peerage. Lord Denman performed the functions of the high office to which he had been called with rare devotion to his duties and independence of character till March, 1850, when he retired on the ground of ill health. He died at Stoke Albany in Northamptonshire, aged seventy-six, September 22, 1854. [E.R.]

DENNISTOUN, JAMES, an historical writer and amateur of art, was born in Dumbartonshire in 1803; died in February, 1855. He was distinguished by his acquaintance with the literature and history of Scotland, and contributed some interesting papers to the reviews. His 'Memoirs of the Dukes of Urbino,' is a well known and admired work; since which we have from his pen one of the most interesting biographies that has appeared for many years, in the 'Life of Sir Robert Strange,' the eminent engraver, and of his brother-in-law, Andrew Lumisden, secretary to the Stuart princes. Sir Robert Strange was the grandfather, on her mother's side, of Mrs. Dennistoun.

DEPPING, G. B., a Fr. antiquarian, 1784-1854.

DILLWYN, L. W., a Welch magistrate and naturalist, characterized as the father of English botany, author of several important works, 1778-1855.

DOBSON, A. R., a young architect of much promise, son of a gentleman of the same name, long known at Newcastle-on-Tyne, perished in the fire at Gateshead, aged twenty-six, 1854.

DOD, CHARLES ROGER, whose name is familiar to the public as the founder of the 'Parliamentary Companion and the Peerage,' was born in his father's vicarage of Drumlean in 1793. He was educated for the bar, but abandoned his legal studies for journalism, and was for many years a writer in the *Times*. Died 1855.

DONATO, NCHOLAS, doge of Venice, succeeded John Bembo, 1618, and died the month following. He was succeeded by Antonio Priuli.

DONE, JOSHUA, a pianist and composer of music, chiefly of songs, died in poverty, occasioned by his irregular habits, aged about sixty, 1848.

DOVASTON, J. F. M., an essayist and poet, author of 'British Melodies,' and other poems, and of a life of Bewick, the naturalist, with whom he was intimately acquainted, 1782-1854.

DUCIE, EARL, a distinguished English agriculturist and free-trader, 1802-1853.

DU PLAT, GEORGE GUSTAVUS CHARLES WILLIAM, brigadier-general in the British army, died at Vienna, where he had proceeded, after the commencement of the late war, as military commissioner, December 21, 1854. General Du Plat had been nearly forty years in the service, and was recently consul-general at Warsaw. His son, Capt. Du Plat, is an equerry to Prince Albert.

DUPONT. See PONTE, PONTIUS.

DUPONT, (DE L'EURE,) JACQUES CHARLES, chief of the provisional government of France in 1848, was born at Neubourg, in the department of Eux, 1767. He became mayor of his native place in 1792, and continued to fill numerous offices in the magistracy till the revolution of 1830, when he became minister of justice. The reaction under Louis Philippe soon deprived him of this position, and he then identified himself with the opposition in the chamber of representatives. He was proposed to the people by Lamartine, and hailed with universal applause as head of the government after the revolution of February; died 1855.

DUPUY. See PUY, PUTTEN.

E

EGERTON, FRANCIS, the first earl of Ellesmere, of Ellesmere, county Salop, and Viscount Brackley, of Brackley, Northamptonshire, was born on the first day of January, 1800. He was the second son of George Granville, marquis of Stafford, who was afterwards created duke of Sutherland. His grandfather, the preceding marquis of Stafford, had married the daughter, and eventually co-heir, of Scroope, the first duke of Bridgewater, to whose estates the late earl succeeded on the death of his father, assuming then the sole name of Egerton, in place of his patronymic of Leveson Gower. The Ellesmere peerage was a revival, having been first conferred on Thomas Egerton, lord chancellor of England in the reign of James I. The chancellor was created baron Ellesmere and viscount Brackley, but died before the promised earldom was conferred, which James granted to his son under the title of earl of Bridgewater. In the works of Bacon, as well as in the historical annals of the time, the name of lord Ellesmere frequently appears; and a still more interesting literary association is, that his appointment to the presidency of Wales and the Marches was the occasion of Milton writing his masque of *Comus*. The fourth earl of Bridgewater was created duke in 1720, the ducal title becoming extinct in 1803, though the earldom remained till 1828 in another branch of the family. The princely property of the Bridgewater peerage, including the magnificent collection of pictures, was devised by the last duke to his nephew the duke of Sutherland, with remainder to his second son, the deceased earl of Ellesmere.—From Eton, where he received his early education, Lord Francis Leveson Gower went up to Christ Church, Oxford, where he took the B.A. degree in 1821. In 1822 he was returned to parliament, and became a devoted supporter of the policy of Canning. When the London university was projected he became one of its most zealous promoters, despite the outcry about its hostility to the church and to

Oxford and Cambridge. In 1820, as Lord Francis Egerton, he was chief secretary for Ireland; under the duke of Wellington, in 1830, he was secretary at war. On the formation of Peel's government in 1841, he declined a seat in the cabinet. On the bill for the repeal of the corn laws being introduced he moved the address in reply to the royal speech. From 1829 to 1834, he sat for the county of Sutherland, and from 1834 to 1846, for South Lancashire, which he represented at the time of his elevation to the peerage. From an early period Lord Ellesmere cultivated literary tastes, and published several works both in prose and poetry. His lordship's name will, however, be more widely known in connection with art than literature. To the splendid collection of pictures he inherited he made numerous important additions, and the Bridgewater Gallery, said to be worth more than a quarter of a million, is the finest private collection in Great Britain. The late earl was a fellow of several of the learned societies, was vice-president of the Literary Fund; was one of the royal commissioners of the Exhibition of 1851, and a trustee of the British Museum. Few noblemen have better discharged the duties of their order. He died in 1857.

ELCHINGEN, Duc D', the younger son of Marshal Ney, and the inheritor of his father's title, died at Gallipoli, on his way to take a command in the East, July 14, 1854.

ELDON, John Scott, second earl of, grandson of the illustrious chancellor of that name, member for Truro from 1829 to 1831, died in 1854, having nearly two years before become of unsound mind.

ELLIOT, Sir Henry Miles, foreign secretary to the government of India, author of a 'Bibliographical Index to the Historians of Mahommedan India, and a Glossary,' 1809-1854.

ELTON, Sir Charles Abraham, a classical scholar and poet, died 1853.

ESCOTT, Bickham, a political speaker and magistrate, member for Winchester, 1802-1855.

ESTCOURT, Major-General James Bucknall, born 1802, died of cholera in the camp before Sebastopol, June 23, 1855. This gallant officer was appointed on the staff of Lord Raglan, and shared the glories of the principal actions in the Crimea; previously, in 1835, he had accompanied the expedition to the Euphrates.

EVANS, Arthur Benoni, late head master of Market Bosworth school, distinguished as a profound classical scholar and author, was born in Berkshire, 1781; died at Market Bosworth, Leicestershire, November, 1855. Dr. Evans was at once a linguist, naturalist, numismatist, musician, mechanic, anatomist, artist, and divine; and with all these talents he had a large share of those better qualities which gained for him the love and confidence of his parishioners. He belonged to the high church and conservative party.

EWING, James, lord provost of Glasgow, returned member of parliament for that city at the general election in 1832; distinguished for the munificent aid he afforded to various philanthropic movements; 1776-1854.

EZZELIN. See Romano.

F

FABER, George Stanley, the celebrated writer on prophecy, was the eldest son of the Rev. Thomas Faber, and was born in 1774. In 1805 he became the vicar of Stockton-upon-Tees, but exchanged this living for that of Long Newton in 1811. The latter he retained till 1832, when he was appointed master of Sherburn's Hospital, near Durham. Here he died, aged eighty, January 27, 1855. His chief work, which has gone through five editions, is entitled 'Dissertations on the Prophecies that have been Fulfilled, are now Fulfilling, or will hereafter be Fulfilled, relative to the great period of 1260 years; the Papal and Mohammedan Apostacies; the Tyrannical Reign of Antichrist, or the Infidel Power; and the Restoration of the Jews.'

FAUCHER, Leon, a French journalist who rose into notice after the revolution of July by devoting his pen to the doctrines of free trade and political economy, died at Marseilles, Dec. 15, 1854. M. Faucher became home minister under the presidency of Louis Napoleon, and was removed from office previous to the *coup d'etat* of Dec. 2.

FAUCIT, John Saville, stage manager and author of several plays, father of the celebrated Miss Helen Faucit; died 1854. The most popular of his productions are 'The Miller's Maid,' and 'Wapping Old Stairs.'

FAULKNER, Thomas, an industrious writer on topographical and antiquarian subjects, formerly a bookseller of Chelsea, 1776-1855.

FELLOWES, Sir Thomas, a distinguished British naval officer, 1778-1853.

FERDINAND, duke of Genoa, younger brother of Victor Emmanuel, king of Sardinia, born 1822, married to Mary Elizabeth, daughter of the present king of Savoy, 1850; died 1855.

FERRIER, Susan, died at Edinburgh, on the 5th of November, 1854, at an advanced age. Miss Ferrier's novels were three: 'Marriage' (1818); 'The Inheritance' (1824); and 'Destiny; or, The Chief's Daughter' (1831). These works, of which the first was especially popular, had their chief excellence in the vigorous faithfulness and dry humour with which they portrayed characters and scenes of common and real life. The authoress of 'Marriage,' greeted by the author of 'Waverley' as 'a sister shadow,' maintained a dignified and lady-like privacy, on which it would be unseemly to intrude. It may be enough to say, that her father was one of Sir Walter Scott's official colleagues, a principal clerk of the court of session in Scotland; and that, through one of her brothers, she was connected by affinity with the family of Professor Wilson. [W.S.]

FIELD, George, memorable for his successful application of chemistry to the arts; author of 'Chromatics,' 'Outlines of Analogical Philosophy,' and other works; 1777-1854.

FIELDING, Copley Vandyke, late president of the Old Society of Painters in Water Colours, remarkable for the beauty of his marine subjects and landscapes, 1787-1854.

FITZCLARENCE, Lieut.-General Lord Frederick, son of the duke of Clarence and Mrs. Jordan, grand master of the Scottish free-

masons, and a devoted officer of the Indian army, 1799-1854.

FITZWILLIAM, FANNY ELIZABETH, late of the Haymarket theatre, was born in 1803; died at Putney, of cholera, September, 1854. Mrs. Fitzwilliam made her first appearance in public in 1814, as Miss Fanny Copeland, and was particularly successful at the Surrey theatre as Effie Deans in the 'Heart of Midlothian.' She married Mr. Fitzwilliam, an actor of Irish characters, in 1822. Her most popular performances were at the Adelphi, especially with Mr. John Reeves in the 'Wreck Ashore.' Being an admirable mimic she often performed more than one character in the same piece.

FONTAINE, L., a Fr. architect, 1760-1854.

FONTAINE, LOUIS, a French architect, and member of the Academy of Fine Arts, 1764-1854.

FORBES, EDWARD, F.R.S., born in the Isle of Man in 1815, died in Edinburgh, November, 1854. The taste for Natural History which characterized Professor Forbes, and ultimately raised him to the rank of one of the first and most philosophic naturalists of the present day, showed itself in early life. He was educated at the University of Edinburgh, where he was a pupil of the late Professors Jameson and Graham, and studied the kindred sciences of Zoology, Geology, and Botany, with marked success. At the early age of eighteen he visited Norway on a Natural History excursion, and made many observations on its native productions and glaciers. In 1841 he was appointed naturalist to H.M.S. Beacon on the surveying expedition to the Mediterranean, and made a tolerably extensive tour through Asia Minor. During this expedition he carried on an important series of dredging operations, which gave rise to his brilliant theories on the nature and distribution of submarine life in reference to geological changes. In 1843 he was elected Professor of Botany in King's College, London, as successor to George Don. He became secretary and curator to the Geological Society, and in 1845 was elected a Fellow of the Royal Society. On the establishment of the Government School of Mines in connection with the Ordnance Geological Survey under the direction of Sir Henry de la Bèche, Professor Forbes became Palæontologist to that institution; and when the new museum was opened in Jermyn street, he was appointed Professor of Natural History there. In this situation he remained for some time, giving lectures to crowded audiences; and at the same time worked hard in various parts of the country in connection with the Geological Survey. On the death of Professor Jameson of Edinburgh, in the year 1854, Forbes was immediately elected his successor, and entered on the duties of the chair of Natural History in the University of Edinburgh at the commencement of the summer session. There he was pre-eminently popular, and bade fair to raise his own reputation, as well as that of the University of Edinburgh, to a high pitch; but, alas! a disease, the seeds of which had been sown in his constitution some years previously, cut him off, after a very short but severe illness, and after he had filled the chair only a few months. Forbes's works are very numerous, but chiefly consist of detached memoirs in many of the leading scientific journals of the day. His first published separate work was the 'Malacologia Monensis,' a description of the shells of the Isle of Man. His next was the very pleasingly written 'History of the British Star-fishes;' then came his 'Travels in Lycia,' in company with Lieut. Spratt; the 'Natural History of the British Mollusca,' in conjunction with Mr. Sylvanus Hanley; and the 'Natural History of the British naked-eye Medusæ,' published by the Ray Society. He died, much lamented, at the early age of thirty-nine years. [W.B.]

FORESTER, FANNY. See JUDSON.

FORREST, ROBERT, a self-taught Scottish sculptor, died 1853.

FOURDRINIER, HENRY, celebrated for his improvements in the means of manufacturing paper, was born in London 1766. He patented his machine for the manufacture of paper between the years 1800 and 1807, and after various vicissitudes of fortune, his claims were acknowledged by the house of parliament in 1840. Died 1855.

FRANKLIN, SIR JOHN, the lamented arctic voyager, was the son of W. Franklin, Esq., of Moor's Enderly in Lincolnshire, and was born in that county, 1786. He entered the navy in 1800, and served in the action of Trafalgar, and the expedition against New Orleans. At three different periods, previous to his last fatal enterprise, he penetrated the arctic ocean; the first in 1818, the second extending from 1819 to 1822, the third from 1823 to 1827. After his return from the latter in 1828, he married the present Lady Franklin, then Miss Griffin, whose touching appeals and untiring efforts to procure his rescue, have given her a distinguished place in the catalogue of devoted wives. It was on the 19th of May, 1845, that the ships Erebus and Terror sailed from the Thames, with official instructions which directed Sir John Franklin to proceed through Lancaster Sound and Barrow's Straits, to Cape Walker, and to use every effort to penetrate from that point to Behring's Straits; at the same time, in case of circumstances rendering this course impossible, he had full liberty to try any other passage. The voyage as far as Baffin's Bay was prosperous; and the ships were last seen, with all well on board, moored to an iceberg in the middle of that bay, and about 200 miles from the entrance of Lancaster Sound: this was on the 26th of July of the same year. Ever since, their fate has been shrouded in darkness; for notwithstanding the discoveries that have been made and the tales that have been related by the Esquimaux, there is nothing better than surmise in regard to the manner in which they perished,—for this much it would be folly any longer to doubt. We may add, that Sir John Franklin's expedition was provisioned for three years, but, with careful management, it is possible he may have made them last four. [E.R.]

FREDERICK AUGUSTUS, king of Saxony, born 1797, succeeded his uncle 1836, having six years previously been appointed co-regent of the kingdom. He was killed by an accident which overturned his carriage in Aug., 1854, and was succeeded by his brother John.

FULCHER, GEORGE WILLIAMS, a tradesman and magistrate of Sudbury, known as a poet and occasional writer, 1799-1855.

FULLERTON, JOHN, a Scottish lawyer, and one of the lords of the court of session, 1775-1854.

FULTON, JOHN, a native of Ayrshire, remarkable for his self-acquired superiority in the acquisition of languages and the construction of mathematical instruments; died 1854.

G

GABRIAS. See BABRIAS.

GAISFORD, THOMAS, dean of Christ Church, distinguished for his profound and varied erudition; editor of many classical works, 1779-1855.

GARDINER, WILLIAM, a writer on music and connoisseur in the fine arts; author of 'Music and Friends,' and a work of travels, entitled 'Sights in Italy;' 1764-1854.

GAVIN, HECTOR, a physician and sanitary reformer, author of many valuable works, died from an accidental shot at Balaklava, April 20, 1855. His most remarkable labours were in connection with the inquiries into the causes of disease in Newcastle and other towns of the north, during the late visitation of cholera.

GAY. See GIRARDIN.

GENNADIUS. See SCHOLARIUS.

GERVILLE, CHARLES ALEXIS ADRIAN DUHERISSIER, Mons. De, a distinguished archæologist and antiquarian, author of numerous works, including a memoir of his own life; 1769-1853.

GIFFARD, HENRY WELLS, commander of H.M. ship Tiger, son of admiral John Giffard, died at Odessa from wounds received in defending his ship, June 1, 1854. Captain Giffard entered the navy in 1824, and was appointed to the rank of commander in February, 1838. In 1840 he accompanied the expedition against China, and was present at the capture of Chusan, at the blockade of Ningpo, and at Amoy; his ship was the Cruiser, 16. In 1846, he commanded the Penelope steam frigate, bearing the broad pendant of Sir Charles Hotham, on the coast of Africa. The accident by which his vessel was stranded in the neighbourhood of Odessa, is too recent to require particular notice. Every effort that could be made to get the ship off proved unavailing, and in a few hours, the Russians having brought their field guns to bear, opened a murderous fire from the cliffs, which compelled the Tiger to strike her flag. The crew having surrendered, became prisoners at Odessa, where it appears they were treated most kindly. Captain Giffard survived nineteen days, and was buried with military honours, Gen. Osten-Sacken attending the funeral. [E.R.]

GIFFARD, JOHN, a veteran admiral, whose son, Captain Giffard, is the subject of the foregoing notice, died in Southampton, aged ninety, Sept. 25, 1855. Admiral Giffard was a whig in politics, and was for many years the leader of that party in Southampton.

GILBERT, J. F., a landscape painter, 1791-1855.

GILLKREST, JAMES, a veteran medical officer and professional writer attached to the army; d. 1854.

GILLMAN, JOSEPH, a native of Little Over, near Derby, born 1759, died in the ninety-sixth year of his age, June, 1855. This veteran was one of the foremost mutineers at the Nore, and is said to have dictated the last and effective message to Mr. Pitt. He served under Rodney, Hood, and Nelson, and was one of the forlorn hope in the storming of Seringapatam.

GILLY, WILLIAM STEPHEN, a dignitary of the Church of England, author of several popular works, especially concerning the Vaudois Christians; born in Essex, 1789, died in his vicarage of Norham, 1855.

GIRARDIN, MADAME DE, formerly Mdlle. Delphine Gay, celebrated among the literati of France for her poems and other popular works, was born about 1803. She was remarkable for her beauty when very young, and received a special prize from the Academy, and a pension from the crown, for her first poems in 1822. In 1831 she was married to the celebrated Emile de Girardin, and after that period frequently wrote for the *Presse*. Died 1855.

GIRY. See SAINT-CYR.

GODWIN, MAJOR-GENERAL, an Indian officer, commander of the Bengal division of the army in the recent Burmese war, 1785-1854.

GOLDIE, THOMAS LEIGH, brigadier-general in the army of the Crimea, killed at the battle of Inkermann, in the same struggle in which General Sir George Cathcart fell, November 5, 1855.

GOSSET, MONTAGUE, a distinguished surgeon of London, author of several valuable papers in surgical literature, 1792-1854.

GOULBURN, HENRY, late member for the university of Cambridge, and a statesman of the Peel party, was born in 1784. He graduated M.A. in 1808, a year after his return as member for Horsham, and first took office as home secretary in 1810, under the duke of Portland. From 1812 to 1818 he sat for the borough of St. Germains, now disfranchised, and in the latter year was returned for West-Looe. In 1821 he became Irish secretary, and a privy councillor, an office which he vacated in 1828 for that of chancellor of the exchequer under the duke of Wellington, retiring with the rest of the cabinet in 1830, when Lord Grey became premier. In the interval from 1826 to 1831 Mr. Goulburn had sat for Armagh, but in the general election of the last-mentioned year he was returned for Cambridge, and retained his seat till his death. In 1834 he became home secretary under the administration of Sir Robert Peel, and in Sept. 1841 chancellor of the exchequer, since which he lived almost retired from the arena of political agitation; 1789-1856.

GREENOUGH, GEORGE BELLAS, an eminent geologist, born 1777, died at Nice 1854, aged seventy-seven. Mr. Greenough inherited an ample fortune, and sat for some time in parliament. He soon, however, forsook the tangled maze of politics, and devoted his time to scientific pursuits. Geology and geography were his favourite studies, and along with several other kindred spirits, he established the Geological Society of London. Of this he was the first president, and filled the chair several times on subsequent occasions. He also held the office for two years of president of the Geographical Society, and at his death bequeathed his extensive collection of maps to be divided between these two societies. He was a fellow of the Linnæan and Royal Societies, and is the author of 'A Critical Examination of the First Principles of Geology,' which has been translated into German, 'A Geo-

logical Map of England and Wales, with an accompanying Memoir,' which has gone through two editions, and 'A General Sketch of the Physical Features of British India.' During his long life Mr. Greenough employed his time, his money, and his talents, in actively promoting geological knowledge, and at his death left a sum of £500 to be spent in the arrangement and preservation of the maps, which we have already mentioned he had bequeathed to the Geological and Geographical Societies. [W.B.]

GRESWELL, WILLIAM PARR, incumbent of Denton, Manchester, author of several learned works, 1765-1854.

GUNNING, HENRY, a distinguished official of Cambridge university, author of 'Reminiscences of the University, Town, and County of Cambridge from 1789;' 1768-1854.

H

HALL, JAMES, a writer on art, 1797-1854.

HARDING, GEORGE PERFECT, an artist in water colours, famous for his accurate copies of historical subjects, died 1854.

HARE, CHARLES JULIUS, was born on the 13th September, 1795. He gave very early indications of being a sprightly and intelligent boy, and, like many other persons of distinction, he was much indebted for his mental training and refinement of character to the influence of his mother, daughter of Dr. Shipley, bishop of St. Asaph, as well as of his aunt, the widow of the famous Sir William Jones. At a suitable age he was entered a pupil at the Charterhouse; and among the schoolboys contemporary with him at that classical institution, were several who rose to literary eminence in after life, such as Waddington, dean of Durham, and Grote and Thirlwall, the learned historians of Greece. Having completed the usual curriculum of the Charterhouse, Hare was removed to Cambridge in 1812, and his scholarly acquirements having become well known during a lengthened residence at that university, he was elected a fellow of Trinity College in October, 1818, and four years after was appointed assistant tutor of the college. In that prominent situation he had continued ten years, when the family living of Hurstmonceux, in Sussex, becoming vacant by the death of his uncle, he was, by the urgent recommendation of friends, prevailed on to accept that rectory. His tastes were wholly academic, and it was not without a severe struggle that he brought his mind to exchange the congenial studies and society of Cambridge for the laborious duties and retired life of a country clergyman. Previous to entering on the administration of his parish, however, he made arrangements for enjoying a year's absence on the continent. Foreign scenes were not new to Hare, for he had spent several years of his youth in Germany; and it was during his residence in that country that he imbibed that profound admiration for the character and services of Luther, as well as acquired that strong predilection for German philosophy and literature which have stamped his writings with one of their most striking characteristics. Directing his travels now towards the south of Europe, he passed rapidly through France and even Switzerland, in his impatient desire to feast his eye with a sight of the classic scenes of Italy. Greece and Rome were the grand centres around which his associated ideas revolved, and in gratifying his taste with a minute survey of localities which his imagination had invested with so much interest, he passed months which glided with unnoticed rapidity away. In the spring of 1834 he set out on his homeward journey, and forthwith took up his abode in the rectory of Hurstmonceux, which, during his incumbency, displayed the appearance of a splendid mansion-house—being adorned with many rare works of the Italian masters, which, being a passionate admirer of art, he had, at great cost, collected abroad, as well as enriched with a valuable library of 12,000 volumes, a great proportion of which were in the German language. His domestic felicity was consummated by his marriage with an amiable and accomplished lady, sister of his former pupil and friend, Dr. Frederick Maurice. As a parish clergyman, Hare cannot be described as active or zealous in his work. He was, indeed, kind to the poor, when they waited on him. He was, moreover, a powerful and eloquent preacher to people of cultivated minds or philosophic taste; but his sermons were of so refined a strain, so occupied with the discussion of public questions, and protracted to so great a length, as to be altogether unsuitable for the edification of a rustic audience. In his additional office of archdeacon of Lewes, to which he was presented in 1840, he was more in his proper sphere, as appeared from the great interest which his charges to his clergy uniformly produced. It is, however, as an author in the general walks of literature that his name is most widely known. Few, indeed, there are, if any, among his contemporaries, who equalled him in the variety, extent, and accuracy of his knowledge,—in his thorough acquaintance with every form of opinion that prevailed both in this country and on the continent;—above all, with the researches and speculations of the great German writers in philosophy, theology, history, and general literature. His earliest appearances before the world as an author were in his translation of the German romances and tales of Fouqué and Tieck. And it was he who, in conjunction with Thirlwall, bishop of St. David's, had the merit of introducing the English public to an acquaintance with the important labours of Niebuhr in the field of ancient Roman history. But it was particularly in the department of theology that his familiar and minute acquaintance with German speculation was manifested; and it will not be disputed that no person in the present day exercised a greater influence than Archdeacon Hare in stimulating the ardour with which the works of the great German critics are now read and studied in Britain. Among his original works, we may particularize his 'Parish Sermons,' 'The Mission of the Comforter,' 'Guesses at Truth,' which was the joint production of his brother Augustus and himself, 'The Victory of Faith,' Vindication of Luther,' 'Biography of John Sterling,' 'The Psalms in English Verse,' papers in the 'Philological Museum,' and many other periodicals. Archdeacon Hare was a man of independent thought, and was noted for several eccentrici-

ties, one of which was his adoption, on principle, of a strange, but, as he thought, right etymology of the English. Thus, for instance, he wrote *preacht* for preached, and *publisht* for published; and while Thirlwall and Whewell, who both adopted the same peculiarity, afterwards returned to the ordinary practice, Hare, with characteristic firmness to what he conceived the truth, adhered to this singular mode of spelling, in all matters, grave or gay, common or sacred. He was taken suddenly ill in the autumn of 1854, so that it was with difficulty he delivered his last charge to his assembled clergy, and on his return home he continued for a few months in a lingering state, till he expired on the 20th January, 1855, giving to his family a cheering sign of his hope, when he had lost the power of utterance, by pointing with his finger upwards. [R.J.]

HAY, Lieut.-Gen. James, a British officer, distinguished in the Peninsula and at Waterloo, entered the army as cornet, 1795; died 1854.

HEAD, Sir George, elder brother of Sir Francis Bond Head, many years an active commissariat officer; author of several popular works, comprehending his personal memoirs and travels, and an account of the manufacturing districts of the United Kingdom; 1782-1855.

HENDERSON, Lieut.-General, a gallant British officer, commander of the guards at Waterloo; died 1854.

HERBERT, Algernon, a barrister-at-law, remarkable as the author of several extraordinary works on abstruse subjects, scriptural, historical, and philosophical; died aged sixty-three, June, 1855.

HEREDIA, Diego De, a Spanish patriot, chief justice of Madrid in the reign of Philip II.

HERRIES, Hon. John Charles, a member of parliament and statesman, was the eldest son of a London merchant. He was born in 1778, and became a junior clerk in the treasury, 1798. His next appointment was that of private secretary, first to Mr. Vansittart, and afterwards to Lord Bexley, secretary of the treasury. In 1811 he was appointed, successively, comptroller of army accounts and commissary-in-chief; closing his merely official career in 1821 as auditor of the civil list. In 1822 he became secretary to the treasury and member for Harwich, which he continued to represent till 1841. In 1827 he took office under Lord Goderich as chancellor of the exchequer, but soon afterwards resigned, in consequence of a quarrel concerning the appointment of Lord Althorpe, as chairman of the finance committee. His resignation, it is said, was the chief cause of the failure of that administration, but the truth is, the cabinet of Lord Goderich was never firmly cemented, and so many opposite elements existed in it, that its dissolution was almost certain from the beginning. From 1828 to 1830 under the duke of Wellington, Mr. Herries was master of the mint and president of the board of trade. In 1835, during the brief period that Sir Robert Peel held office, he was secretary at war. In 1841, as stated above, he ceased to represent his old constituents, and took no part in political affairs till 1847, when he was elected member for Stamford. In the meanwhile, the principle of free trade had been established by the complete success of the anti-corn law league; and Mr. Herries, as a conservative, found no place in the administration till the formation of Lord Derby's cabinet in 1852, when he became president of the India board. He retired from public life in the spring of 1853. Died at his seat, near Seven Oaks, April 24, 1855. [E.R.]

HERSEE, William, a miscellaneous writer, many years editor of the *Warwick Advertiser*, 1786-1854.

HINKS, Rev. Thomas Dee, LL.D., professor of Hebrew and Oriental languages in the Royal Belfast Academy, was born in 1787, and died on the 24th February, 1857, at the advanced age of ninety. Dr. Hinks was peculiarly distinguished for his scholarship, and for the attention he paid to agricultural improvement. He commenced the Munster *Farmers' Magazine*, a work which did much to raise the standard of farming in the south of Ireland. In 1821 he was elected head master of the classical school in the Royal Belfast Academy, and in the succeeding year was appointed professor of Hebrew and Oriental languages, an appointment which he held with great credit until his death. Dr. Hinks is the father of the distinguished Orientalist of that name.

HOARE, Sir Hugh Richard, born 1784, died 10th January, 1857.

HOBHOUSE, Right Hon. Henry, keeper of state papers, and one of the ecclesiastical commissioners for England, was born in 1776, and called to the bar in 1801. From 1817 to 1827, he held the office of under secretary of state for the home department, and was appointed keeper of her Majesty's state papers after the discovery of Milton's long lost theological work among the unarranged documents in 1825. Died 1854.

HODGSON, Francis, provost of Eton, a distinguished classical scholar, 1781-1853.

HOLLINS, John, a portrait painter, 1798-1853.

HOLMES, John, assistant-keeper of the manuscripts in the British Museum, and an author on several occasions, was born in 1800, and brought up as a bookseller. We are indebted to his pen for a new edition of 'Cavendish's Life of Cardinal Wolsey,' published 1852; died April, 1854.

HOOD, Francis Grosvenor, colonel in the 3d battalion of grenadier guards, born 1810, killed in the trenches before Sebastopol, October 18, 1855. He was a grandson of admiral the first Viscount Hood, and was remarkable for his gallantry. After the battle of the Alma he received the special thanks of the commander-in-chief and the duke of Cambridge for the manner in which he brought his regiment into action.

HOPE, William Williams, an eccentric character, who devoted his enormous wealth to gratify his taste for articles of vertù, and to the refinements of music, literature, and art; died in Paris, 1854. His collections have since been sold.

HUME, Joseph, was the son of a master mariner trading from Montrose, where he was born in 1777. Left fatherless at an early age, he was indebted to his mother for the training which enabled him, on all occasions, to rise superior to the difficulties by which he was surrounded. The smallness of her resources, as the mistress of a little shop in Montrose, did not prevent Mrs. Hume aspiring to a better position for her son, and she apprenticed him to a surgeon-apothecary

in his native town. In 1796, he became a member of the College of Surgeons at Edinburgh; and having obtained a professional appointment in the service of the East India Company, he left England at the commencement of the Mahratta war. On the voyage out, he performed the duties of purser, in addition to his own as assistant-surgeon; in India he mastered the native languages, and acted as interpreter of Persian to the army; being at the same time postmaster, paymaster, and commissariat officer. These multifarious occupations enabled him to return to England, in 1808, with a well-earned fortune of from £30,000 to £40,000. He then travelled a year or two in Europe and the East; and, in 1812, bought a seat in parliament, which he lost almost immediately by a dissolution. At this period of his life he became an active member of the central committee of the Lancasterian school system, and was most anxious to obtain a place in the directory of the East India Company, in which, however, he did not succeed. In 1818, he was sent to parliament as representative of the Aberdeen district of burghs, which included his native Montrose, and he continued to represent the same constituency till 1830, when he was returned for Middlesex in conjunction with Mr. Byng. In 1837, he was defeated by Colonel Wood; but was returned for Kilkenny, by the aid of O'Connell's influence, in the same month. In the conservative house of 1841 he found no place; but the following year he was returned by his old constituents of Montrose, in whose service he expired. It is almost needless to characterize Mr. Hume, whose political character and public services are as well known as the British constitution itself. Nothing could overcome his almost dogged perseverance in the course he had marked out for himself—we ought rather to say, his inflexible principles and amazing industry as a member of the House of Commons. The blue books and parliamentary papers of the last quarter of a century may be regarded as a lasting monument of his unremitting application to business, of his consistency in the cause of reform, and of his victories over innumerable abuses. From these piles of almost repulsive literature must hereafter be extracted the true story of his achievements, and the legends of the sinecurists and drones that his trenchant arm has delivered us from. Died at his seat, Burnley Hall, in Norfolk, February 20, 1855. [E.R.]

HUNT, Frederick Knight, late editor of the *Daily News*, was born in 1814, and was early thrown upon his own resources as an employé in the office of the *Morning Herald*. By the most extraordinary exertions he supported his mother and her five children, left unprovided for by the death of his father, and yet contrived, by a course of reading and self-culture, to prepare himself for a professional career. He studied medicine as well as literature; to which circumstance we owe one of his projects, 'The Medical Times.' Having become well known as a journalist, he was selected by Mr. Dickens as one of the assistant editors for the *Daily News* in 1846, and became its editor in chief, 1851. Died in November, 1854. Mr. Hunt is author of 'The Fourth Estate: a History of the English Newspaper Press.'

I

INGLIS, Sir Robert Harry, whose name will long be remembered as a zealous churchman, and supporter of the charitable institutions of his country, was the son of the first baronet, who was for many years chairman of the East India Company. He began life as a member of the bar, but declining the law, took his seat in the House of Commons as member for Dundalk in 1824. At the close of 1826 he became member for Ripon, and from 1828 to 1853 sat for the university of Oxford. Died in the seventieth year of his age, May 5, 1855.

INSOM, ——, a distinguished sculptor, settled many years past at Florence, died, 1855.

J

JAMES, Edward, a dignitary of the Church of England, well known for his classical attainments, 1790-1854.

JAMESON, Robert, a distinguished mineralogist and geologist, born at Leith 1773, died in Edinburgh 1854, in his eighty-first year. Educated for the medical profession, his attention seems to have been early directed to the study of natural history. At the commencement of his studies, the celebrated Werner was causing the sciences of mineralogy and geology to assume much greater importance than they had ever done before. Young Jameson placed himself under his guidance, became a pupil at Freyburg, where Werner had established his school, and embraced with great ardour the particular doctrines which he taught. In 1804, upon Dr. Walker's death, Mr. Jameson was elected his successor as Regius Professor of Natural History, Lecturer on Mineralogy, and Keeper of the Museum in the University of Edinburgh. The prevailing tendency of Jameson's mind was of a practical nature, and the duties attending his appointment to this chair were fulfilled with great zeal and activity for a long series of years. He rendered the study of natural history, and particularly mineralogy and geology, more popular in Edinburgh than they had ever been before, and the museum attached to the chair was immensely increased by his exertions and judicious outlay of money. At his death, the collection of minerals and rocks amounted to 40,000 specimens; the fossils to 10,000; while of crania and skeletons there were no fewer than 800. Other kingdoms of nature were in like manner represented, and he had in addition collected together numerous drawings, casts, models, maps, and instruments for surveying. Professor Jameson's works are chiefly his valuable work on 'Mineralogy,' his 'Translation of Cuvier's Theory of the Earth,' and numerous papers contributed to the 'Wernerian Society's Transactions.' He was for many years editor of one of the first natural history and scientific periodicals of the day, the 'Edinburgh Journal,' and he was a fellow of almost all the learned societies of Europe, and several in America. [W.B.]

JAY, William, an eminent dissenting minister, was born in humble circumstances at Tisbury

in Wiltshire, 1769. He began preaching when a mere youth, and was only sixteen when he was admitted into the pulpit at the Surrey Chapel. In 1791, he was settled as the minister of Argyle Chapel in Bath, where he died in his eighty-fifth year, Dec. 25, 1854. He is the author of many volumes of sermons, his last being 'Lectures on Female Scripture Characters,' published since his death, but delivered nearly half a century ago.

JERROLD, DOUGLAS, was born on the 3d January, 1803, whether in London or Sheerness is doubtful. His father, Samuel Jerrold, was manager of the theatres of Sheerness and Southend. Among the theatrical folks who played on his father's stage was Edmund Kean, who carried him on the boards in Rolla, and with whom he also appeared as 'The Stranger's Child.' Like most young men bred up amidst the associations of the sea, Jerrold's thoughts, in reference to a profession, early took a nautical turn. From this predilection his father in vain sought to dissuade him, but finding remonstrance useless, he procured for him a midshipman's commission in a man-of-war commanded by Captain Austen, brother of the great novelist. Jerrold's health physically unfitted him for the naval profession. Retiring from the sea, at his own solicitation, he was apprenticed to a letter-press printer in London. After mastering the mechanical duties of a compositor, the *cacoëthes scribendi* innate in Jerrold developed itself. An essay on the opera of 'Der Freischutz' was dropped by him into the editor's box of the *Monitor*, on which he was employed. He was made aware of the fate of his anonymous composition, not by a 'notice to a correspondent,' but by having it put into his hands to set up for the next number of the paper. The essay created a sensation, but the author preserved his *incognito*, until earnest inquiry being made, he disclosed the authorship to the editor, who henceforth employed him upon literary work. Jerrold's career as a dramatic author now commenced. When only eighteen years of age, he wrote 'More Frightened than Hurt,' a two act farce, followed soon after by 'The Smoked Miser,' 'The White Milliner,' and numerous other productions. His 'Black-eyed Susan' was produced at the Surrey theatre with the most triumphant success; for hundreds of nights it was performed without interruption; it retrieved the fortunes of Elliston, the manager of the Surrey, then all but desperate, and it gave Mr. T. P. Cooke independence. 'The Mutiny at the Nore' followed this great success; and among the numerous productions of his pen at this period the most noteworthy are 'Nell Gwynne,' 'The Schoolfellow,' and 'The Housekeeper,' the 'Bride of Ludgate;' and transcending all these efforts at length appeared his 'Rent Day,' suggested from Wilkie's celebrated pictures. For this play Wilkie sent Jerrold a handsome letter, accompanied by a couple of proof engravings, with the great painter's autograph. 'The Rent Day' proving nearly as great a success as 'Black-eyed Susan,' Jerrold resolved to take a theatre for himself, and thus reap the full advantage of his labours. In connection with Mr. Hammond he became joint lessee of the Strand theatre, and so long as Jerrold and Hammond kept by the Strand property success crowned their enterprise. Unfortunately, in an evil hour, they exchanged the Strand for Drury Lane, which proved as signal a failure as the former had been a success. About this time 'The Heads of the People' was published. In it Jerrold wrote 'The Pew Opener,' 'The Lawyer,' 'The Pawnbroker,' and other less known papers, all marked by his well known and peculiar powers. When *Punch* was started, Mr. Jerrold was absent from England, but so soon as he returned he became one of its most brilliant contributors. His early contributions to *Punch* were signed 'Q,' and among these appeared that most memorable of them all, 'On the Custom of Blessing Colours for the Army,' which the Society of Friends had reprinted and posted throughout the kingdom. '*Punch's* Letters to his Son,' 'The Story of a Feather,' and the 'Candle Lectures,' will keep green the memory of Jerrold's connection with that amusing and instructive serial. From some cause or other none of Jerrold's separate ventures were very successful. The *Illuminated Magazine*, the *Shilling Magazine*, and his *Weekly Newspaper*, were all of them more or less pecuniary failures. It was in the *Illuminated Magazine* that Clovernook, perhaps the most finished of his works, appeared. Jerrold's *Shilling Magazine* first gave the world the tale of 'St. Giles and St. James,' in which, more completely than anywhere else, may be found Jerrold's views of social ethics. When he had ceased connection with his *Weekly Newspaper*, he became editor of *Lloyd's*, which, under his management, attained an enormous circulation. He died on Monday, 8th June, 1857, in the full vigour of his powers. To the last all about him had hopes of his speedy recovery, even the doctor shared the delusion: he alone seemed to know that his end was near. When asked how he felt, he replied, 'As one that is waiting and waited for.' His dust reposes in Norwood cemetery. His literary friends have presented a testimonial to his widow in the form of an annuity, the proceeds of various performances for her benefit.

JEW, WANDERING. See SAINT-GERMANO.

JOHN, King of Navarre. See ALBRET.

JOHNSTON, GEORGE, M.D., born 1797; died 1855. Dr. Johnston was a native of Berwickshire in Scotland, studied medicine at the University of Edinburgh, and was a pupil of the celebrated Dr. Abercromby of that town. After taking his degree of medicine, he commenced practice at Belford in Northumberland, but shortly afterwards removed to Berwick-upon-Tweed, where he continued to reside as one of the principal medical men of that town till the day of his death. As a medical man he was very successful in his practice, and procured the love and confidence of his patients; but it is as a naturalist that he will be best known to posterity. Botany being a part of the curriculum of the Edinburgh School of Medicine, and an attendance upon the lectures on that science being imperative upon students, Dr. Johnston was first led, like many of his contemporaries, to follow that study, and his 'Flora of Berwick-upon-Tweed' is a proof of his earnestness and zeal in prosecuting it. While preparing materials for that work he was at the same time paying particular attention to the natural history of the marine invertebrate animals inhabiting Berwick Bay; and his numerous papers in 'Jameson's Philosophical Journal,'

'London's Magazine of Natural History,' and the 'Annals and Magazine of Natural History,' attest the amount of labour he bestowed upon their habits and characters, while the illustrations from the pencil of Mrs. Johnston conferred additional value on the important papers so published. Dr. Johnston's observations upon these comparatively speaking obscure animals were continued for many years, and perhaps no man since the celebrated Colonel Montagu has done so much to advance our knowledge of this neglected field of zoology. His more mature works are his 'History of British Zoophytes,' which has passed through two editions; his 'History of British Sponges and Corallines,' a work long ago out of print; his 'Introduction to Conchology,' which has been translated into German; and the first volume of the 'Natural History of the Eastern Borders,' which for many years of his life formed his chief solace in the midst of the harassing calls of his profession. This volume contains the 'Flora of the district,' and has been characterized as one of the most delightful botanical works which has ever appeared. The 'Fauna' was to have followed, but his death prevented its completion. A 'Monograph of British Annelides,' written as one of the series of catalogues of animals contained in the British Museum, was nearly completed, and we believe is now in the press. Dr. Johnston was one of the editors of the 'Magazine of Zoology and Botany,' afterwards called the 'Annals and Magazine of Natural History,' which he continued to be till his death. He was the founder of the 'Berwickshire Naturalists' Club,' and of the 'Ray Society,' both of which institutions have done good service to natural history; was a fellow of the Royal College of Surgeons of Edinburgh; LL.D. of the Marischal College of Aberdeen; and had been twice elected mayor of the town of Berwick, to the interests of which he devoted much attention. [W.B.]

JOHNSTON, James F. W., a popular writer on chemistry and some of the allied subjects, was born at Paisley in 1786; and became reader of chemistry and mineralogy in the university of Durham on its foundation in 1833. In 1843, he was elected chemist to the Agricultural Society of Scotland, an appointment which did not interfere with his former office, which he resumed till his death in September, 1855. Professor Johnston had the honour of studying chemistry under Berzelius. The most popular of his works is the well known 'Chemistry of Common Life.'

JONES, Richard, a minister of the Church of England, and professor of political economy and history in Haileybury college, memorable for his part in effecting the tithe commutation, 1791-1855.

JOWETT, William, a minister of the Church of England, author of several practical works, 1787-1855.

JUDSON, Emily C., formerly Miss Chubbuck, a graceful American writer, was born in the state of New York about 1814. She was first known to the public about 1843 by her *nomme de plume* of 'Fanny Forester.' A collection of her sketches and poems was published at Boston in 1846; died 1854.

JULIA SABINA. See Sabina.

K

KAY, John, D.D., bishop of Lincoln, a learned prelate of the Church of England, 1783-1853.

KEMBLE, Charles, the last surviving brother of that distinguished family of actors, was born at Brecknock in South Wales, 1775; died, aged seventy-nine, November, 1854. He possessed remarkable powers as a comedian, and acted the subsidiary characters of the drama with surprising effect. His career on the stage closed in the spring of 1840; but he occasionally appeared before the public as a reader of Shakspeare. The celebrated Miss Fanny Kemble, now Mrs. Butler, is his elder daughter.

KEMBLE, John Mitchell, the eminent Anglo-Saxon scholar and archæologist, was born 1806. Mr. Kemble was the eldest son of the late famous actor, Charles Kemble, and was educated, during his earlier years, by Dr. Richardson, author of the Dictionary of the English Language. In 1826, Mr. Kemble entered at Trinity College, Cambridge, and there graduated B.A. and M.A. At Cambridge he obtained a prize for English composition, and became eminent as a speaker at the "Union," a literary society, consisting of Tennyson, Charles Buller, Maurice, Sterling, French, and others hardly less distinguished. Soon after Mr. Kemble had taken his degree, he, with a college friend, who now holds a high position in the English Church, and some other Englishmen, were induced by General Torrijos to engage in an enterprise for the deliverance of Spain from the tyranny of Ferdinand, reimposed upon the nation by the Bourbons. The plot was betrayed to the Spanish Government, and Torrijos and his friends were shot. By a lucky accident Mr. Kemble was prevented from landing in Spain, and thus escaped the fate of his comrades. After this adventure, Mr. Kemble made a lengthened residence in Germany, where he contracted an intimate friendship with the celebrated Jacob Grimm, and was regarded by that eminent philologist as one of the most promising of his disciples. On his return from Germany, Mr. Kemble was appointed editor of the *British and Foreign Review*, established by the late Mr. Kentworth Beaumont, chiefly for the purpose of directing public attention to the aggressive policy of Russia. Whilst engaged in the editorship of the *Review*, which, in his hands, was ably conducted, Mr. Kemble produced his 'Saxons in England,' a work which at once established his reputation as a historian. This work was founded, in a great measure, on his *Codex Diplomaticus Ævi Saxonici*, a collection of documents relating to the Saxon period, which he had amassed from various sources with infinite labour. A great archæological work, the *Horæ Ferales*, for which he found materials amongst the ancient sepulchres of Germany and England, was left by Mr. Kemble in such a state, that a portion of it at least can be published. Mr. Kemble died suddenly, in the full maturity and vigour of his powers, in Dublin, on the 26th Feb., 1857.

KITTO, John, D.D., was a native of Plymouth, and, in his own opinion, of Phœnician descent; for 'the Greek word *Kittô*,' says he, 'is that which

Dioscorides uses for the name of a species of cassia. And this again is called in Hebrew *kiddah*, which, as well as the Greek, probably represents the Phœnician name of this aromatic. Now, the Phœnicians had much intercourse for tin with the remote part of Cornwall, from which my grandfather brought his family; and the probability is, that it was at least a Phœnician name, if it does not imply a Phœnician origin for those who bear it.' Kitto's father was a master-builder, who, notwithstanding he possessed the greatest advantages for insuring success in the world, yet neglected his business—and in consequence of the unfortunate habits into which he fell, was reduced to the necessity of becoming a jobbing mason, and plunged himself and family in deep distress. Among other consequences of this domestic poverty, the education of young Kitto was neglected; for both through the inability of his parents to bear the expenses of his schooling, and the necessity for assisting his father's labours, he was removed from the care of a teacher at an age when he was but an indifferent scholar even in the common branches of learning. When he was twelve years of age, an accident happened, the consequences of which were felt through the whole of his future life. He was engaged assisting his father in new slating the roof of a house, and having ascended to the top of the ladder with a pile of slates on his head, he was in the act of stepping on to the roof, when suddenly losing his presence of mind, he fell from a height of thirty-five feet into the paved court below. For a fortnight he lay in a state of insensibility; and when at length he awoke to consciousness, it was to become aware of the dreadful fact, that he was hopelessly deaf. Various experiments were tried to restore to him the use of his hearing, but although the tympanum of his ear was not destroyed, all means proved ineffectual for the recovery of the lost sense. In other respects he continued long in a state of the greatest nervous debility, and even after his recovery, it was found that he was totally unfit for resuming the manual labours of his former trade. Happily a strong literary taste, which, during his protracted confinement, was not created so much as it was more fully developed, led him to resort to books, first for pleasure, and afterwards for usefulness, till the idea gradually sprung up that it might be turned to account as a means of support, since he had become incapacitated for a more active employment. His reading was chiefly, though not exclusively, directed to sacred literature; and after two extensive tours which he was enabled successively to make through Russia, and Northern Europe, and especially in Persia and the countries of Western Asia, where his intelligent mind was struck and deeply interested with the observance among living people of manners and customs analogous to those described in the Holy Scriptures, he returned, resolved to use the literary materials he had amassed for the illustration of the sacred volume. The fruit of his observations and researches appeared first in the issue of the Pictorial Bible: and the success of this publication, though anonymous, was so encouraging, and his fame as a commentator so fully established, that he found no difficulty in procuring employment from the booksellers in other undertakings of a similar kind. A great number of small compilations, such as 'The Pictorial History of Palestine,' 'The Court of Persia,' &c., came from his indefatigable pen; for being disqualified by his deafness from mingling in society, and depending for support of himself and family entirely on the produce of his literary labours, he wrought with extraordinary industry—seldom less than fourteen hours in a day. Dr. Kitto did not confine himself to these smaller works: zealous in the diffusion of all kinds of knowledge that bore on the illustration of the Word of God, he projected other undertakings of a higher character and importance, both for learning and philosophical discussion, than had been previously attempted in this country, and which the respect entertained by biblical scholars for his editorial qualifications enabled him, with the assistance of several able coadjutors, successfully to execute. 'The Cyclopædia of Biblical Literature,' and 'The Journal of Sacred Literature,' which have contributed so much to extend the range of theological study among British divines, owe their existence to his skill and persevering industry. But the most widely popular of his works was, the 'Daily Illustrations of the Bible,' being original readings for a year on subjects from Sacred History, Biography, Geography, Antiquities, and Theology, especially designed for the family circle. This work is only a compilation, for the materials are gleaned from all quarters; but they are arranged with great skill—the style is distinguished by a beautiful simplicity—and the subjects treated in such a manner as tends greatly to promote among common people the intelligent reading of the Scriptures. As a theological writer, in the peculiar department of illustration he chose, Dr. Kitto's distinguishing characteristics were patient research—a sound judgment—a strict and faithful adherence to truth, even in the most minute and trifling particulars; so that he makes his readers feel they may place implicit confidence in the accuracy of his statements. Though never in orders, he was, on account of his rare attainments in theology, honoured with the degree of doctor in divinity; and he was further rewarded by an annual pension of £100 from her Majesty. Worn out by his incessant labours, and perhaps the internal mechanism of the head having been permanently injured by the dreadful accident that occasioned his deafness, he was, for a considerable time, subject to a painful neuralgic affection, and obliged, by medical advice, to relinquish all literary exertion for the space of two years. For the benefit of the waters, he removed with his family to Cannstadt, in Germany, and had not been long established there when he died in the spring of 1855. [R.J.]

KLITZ, PHILIP, an English organist and composer, author of several famous compositions, 'Tales of the New Forest,' &c., 1805-1854.

KRASINSKI, COUNT VALERIAN, a Polish diplomatist and historical writer, one of the most distinguished of the exiles in this country, died at Edinburgh, Dec. 22, 1855.

L

LAMBERT, MARK, distinguished for his excellence as an ornamental engraver, and once the assistant of Thomas Bewick, by whom the art of wood engraving was restored, 1781-1855.

LAMENNAIS, ABBE DE, the celebrated republican writer, formerly a priest of the Church of Rome, died Feb. 27, 1854.

LANDMANN, GEORGE T., lieut.-colonel in the royal engineers, died in his seventy-fourth year, Aug. 1854. Colonel Landmann saw a good deal of service, and was actively engaged in engineering works during the great war, dating from 1795 to 1812. His memoirs, recently published, are interesting for their store of anecdote and much curious matter of history.

LANDSBOROUGH, DAVID, minister of the Free Church in Saltcoats, and an associate of the Linnæan Society, author of valuable scientific memoirs, 1781-1854.

LANE, HUNTER, an English physician and distinguished professional writer, 1802-1853.

LANGTON, MISS JANE, chiefly remarkable as the god-daughter of Johnson, mentioned in 'Boswell's Life' as the subject of a well known letter written by him, 1775-1851.

LARDNER, LEOPOLD JAMES, remarkable as a linguist and bibliographer, late one of the assistants in the printed book department of the British Museum, 1815-1855.

LA RIVIERE. See BAILLIE, ROCHE.

LARKIN, NATHANIEL JOHN, well known in London a few years ago as a maker of geometrical solids, and teacher of crystallography, died in the seventy-fourth year of his age, October, 1855, in the neighbourhood of Hornsey. Besides one or two elementary treatises, he published, in 1820, 'An Introduction to Solid Geometry, and to the study of Crystallography.' The object of this work was to demonstrate some of the curious properties belonging to the Platonic bodies, and their relations one to another, independent of the sphere.

LAWRENCE, ABBOT, late ambassador to England from the United States, was born in 1793, and educated as a merchant. He had long been known as a public character and member of Congress, when, in 1843, he was appointed one of the commissioners for the settlement of the north-eastern boundary. In 1849, he accepted the post of minister at the court of London, and was well known for his public spirit and efficient services till 1852, when he returned home. The Hon. Abbot Lawrence died at Boston, Aug. 18, 1855, and is said to have bequeathed large sums to charitable and other public purposes.

LELIUS. See LÆLIUS.

LETELLIER. See TELLIER.

LICHFIELD, THOMAS WILLIAM ANSON, earl of, postmaster-general from 1835 to 1841, in which period the uniform rate of a penny inland postage was brought into operation, was born in 1795, and succeeded his father in the peerage, 1818. The assembly of O'Connell and other Irish members at his house in St. James's square, during the premiership of Lord Melbourne, gave its designation to the 'Lichfield House Compact;' died 1854.

LINDLEY, ROBERT, a distinguished violinist, died, aged eighty-three, June 30, 1855.

LISTON, MRS., formerly Miss Tyrer, and widow of the celebrated John Liston, a successful actress of comic parts, 1780-1854.

LOCKHART, JOHN GIBSON, was the son of one of the city ministers of Glasgow, who belonged to a landed family in Lanarkshire. He was born at Cambusnethan (of which parish his father was then pastor) in 1794. Presented, by the senatus of the University of Glasgow, as a distinguished student, to one of the Snell exhibitions at Oxford, he entered at Baliol College in 1809; in 1813 he took honours as a first-class man *in literis humaniоribus;* and he graduated as LL.B. in 1817. A little before this last date he had gone to study in Germany, the literature of which country he soon contributed to make known among us. He became a member of the Scottish bar, but can hardly be said to have made any serious attempt to practise the profession. Literature soon became his constant business. From an early period in the history of 'Blackwood's Magazine,' founded in 1817, he was one of its ablest and most active contributors. It was never doubted but he was the writer of some of the severest and most sarcastic of the papers, by which, in its palmy days, that energetic but unscrupulous periodical infused so much of gratuitous bitterness, both into politics and into literature; and, though Lockhart's reputation as an unsparing satirist may have brought on him the imputation of having been the author of attacks really perpetrated by others, yet there were several circumstances, and among others the unfortunate affair ending in the death of John Scott, which indicated that he considered himself as bearing a large share of the responsibility involved in the management of the magazine. At all events, no one questioned the high talent, scholarship, and accomplishments, which he brought to bear on literature. Much of these, with a strong party spirit, but without the worst of the magazine-features, was exhibited in 1819, in his anonymous work, 'Peter's Letters to his Kinsfolk.' In 1820, he married Sophia, the eldest daughter of Sir Walter Scott. Afterwards he published, or rather collected from the magazine, his very fine and spirited versions of 'Spanish Ballads:' while, from 1824, appeared, successively, his striking novels, 'Valerius,' 'Reginald Dalton,' 'Adam Blair,' and 'Matthew Wald.' His 'Life of Burns,' in 1825, made a volume in 'Constable's Miscellany.' In 1826, a year or two after Gifford had retired from the editorship of the 'Quarterly Review,' Lockhart was very deservedly chosen to be his permanent successor; and London was thenceforth his place of residence. There is not, probably, among competent judges, any dissent from the opinion, that in his hands the 'Quarterly Review' was the most skilfully edited periodical of its day. On the death of his celebrated father-in-law in 1832, there was devolved on him a task which a more chivalrous man might have executed in a more generous spirit, and perhaps, also, with more of real wisdom and discretion. But the task involved difficulties which, probably, no man whatever could have vanquished completely; and, whatever may be its faults, whether of shortcoming or of excess, Lockhart's 'Life of Scott' must long hold its place, as a singularly

though painfully interesting monument in our literary history. In 1843, Lockhart's income, long (it is to be believed) abundant beyond that of most literary men, was increased by some hundreds of pounds, on his appointment, by Sir Robert Peel, to the sinecure office of auditor of the Duchy of Cornwall. In 1853, he was compelled, by ill health, to retire from the management of the Review. He sought renovation of strength by a visit to Italy, but in vain; and he died, on the 25th of November, 1854, at Abbotsford, which by that time had become the residence of his son-in-law. His wife had long predeceased him; so had his elder son, the boy to whom the 'Tales of a Grandfather' were dedicated; a younger son had followed in early manhood; and Sir Walter Scott's family is now represented by Lockhart's daughter, Mrs. Hope Scott. [W.S.]

LONDONDERRY, CHARLES WILLIAM, third marquis of, a gallant Peninsular officer, author of a 'Narrative of the War' in which he served; distinguished for his public spirit on several occasions, and especially for his friendly interference in behalf of Abd-el-Kader; born 1778, envoy at Berlin 1813, succeeded his brother in the peerage 1822, died 1854. We are indebted to his pen for a valuable contribution to English history in the correspondence of his brother.

LOW, RIGHT REV. DAVID, a Scottish prelate, remarkable for his acquaintance with the traditions of the last two centuries, the most valuable of which were embodied by Mr. Chambers in his 'Histories of the Rebellion;' died in his eighty-eighth year, 1855.

LUCAS, FREDERICK, a Roman Catholic polemical writer, elected in 1852 member for Meath, died in his forty-third year, Oct., 1855.

LYONS, EDMUND MOUBRAY, commander in the royal navy, son of vice-admiral Sir Edmund Lyons, was born in 1819. Died of a wound received in the attack on Sebastopol, June 23, 1855. The operations of Captain Lyons in the sea of Azoff are fresh in every one's memory; and he was equally successful in the expedition of the previous year to the White Sea. One of his officers writes: 'The navy has lost its greatest ornament; and we have lost one who, to us, was more than a friend; he was so brave, so great, so good, and so amiable, that we all loved him much more than we knew.' His body was interred at Therapia, the greatest honour being shown to his memory by the officers who attended, and the crowds of people who flocked to his funeral. [E.R.]

M

MACDONALD, WILLIAM RUSSELL, a journalist and miscellaneous writer, late editor of *Bell's Life in London*, and author of many pleasing productions for the young; 1787-1854.

MACKAY, CHARLES, an eminent Scotch actor, was born in Edinburgh, October, 1787. When only nine years of age, he left Dunedin for Glasgow, but finally returned to his native city about the close of the year 1818. It was in the spring of 1819 that 'Rob Roy' was first produced in Edinburgh. Mr. Mackay, who had already made a reputation in Aberdeen, now joined Mr. Murray's company; and, as Bailie Nicol Jarvie, earned the highest laurels. 'One would think,' said Sir Walter Scott, 'the part made for him, and him for the part. He is completely the personage of the drama—the purse-proud, consequential magistrate, humane and irritable in the same moment; and the true Scotsman in every turn of thought and action.' So complete was Mr. Mackay's identification with the character, that he became known among his acquaintance by the familiar cognomen of the 'Bailie.' As a delineator of Scottish character as developed in the several dramas founded on our great romancist's novels, Mackay stood unequalled and unapproached. With his retirement, a certain set of characters disappeared from the stage, as completely as the true Lady Macbeth died with Mrs. Siddons. The Bailie was, no doubt, his masterpiece; but who ever played Peter Peebles, Dumbiedykes, Meg Dods, Jock Howieson, and the rest, as he played them? His humour was intensely Scottish, dry, shrewd, rich, and pawky, yet independent, reserved, genial. His accent and pronunciation were perfect. His Scotch was not a vulgar, coarse, broad Scotch, but an easy, unaffected, natural dialect, spoken as a native language, not as an imitated *patois*. In his acting he never overstepped the modesty of nature; content to be appreciated by those who knew and enjoyed true dramatic talent, without prostituting his humour to draw the laughter of the vulgar. Mr. Mackay continued a hardworking and respected member of the Edinburgh theatre till 1841, when he ceased to belong to the regular company, after twenty-two years' honourable and successful service. In 1848, he resolved upon retiring from the stage. Mr. Wilson, the distinguished vocalist, made an offer of his services on the occasion, and in the name of the dramatic company, presented the veteran performer with an elegant cup. On some few occasions after this, did the Bailie revisit the scene of his former triumphs. Mr. Mackay died at Edinburgh, on the 2d November, 1857, in his seventy-first year. His departure snaps another of the now rapidly lessening links that bound the present generation to the generation of Scott and his contemporaries.

MACKENZIE, THOMAS, a Scottish architect, especially distinguished for his restorations of the old baronial castles of his country; died in the prime of life, 1854.

MACKESON, COLONEL, an officer in the East India Company's service, distinguished as a diplomatist; assassinated at Peshawur in 1853.

MADOX, WILLES, a painter of portrait and history; born 1813, died at Constantinople, 1854.

MAI, ANGELO, Cardinal, a distinguished classical scholar, memorable for his discoveries of lost portions of the classics, late chief librarian of the Vatican, was born in the diocese of Bergamo, 1782. His remarkable discoveries date from 1814, when he was keeper of the Ambrosian Library at Milan, and an historical account of them written by Mr. Archdeacon Nares, was communicated to the Royal Society of Literature in 1824. A collected edition was published in ten quarto volumes, in the years 1825 to 1838. Cardinal Mai died at Albano in his seventy-third year, Sept., 1854.

MANBY, Captain George William, the inventor of several kinds of apparatus for saving lives in case of shipwreck, died at Southtown, near Great Yarmouth, in the ninetieth year of his age, November, 1854. He was the son of an officer in the army, and in 1803 was appointed barrack-master at Yarmouth. The wreck of the Snipe gun-brig, of which he was an eye-witness, causing a great loss of life, was one of the causes that set his inventive faculties at work in devising some means of affording aid to the sufferers by similar disasters. In this endeavour he was assisted by grants from the government, and lived to be recognized as the benefactor, not of his own country only, but of all Europe. He had the happy consciousness of having saved upwards of 1,000 lives by his various inventions.

MANCHESTER, George Montague, sixth duke of, memorable as a leader of the English protestant party, and for his learned and thoughtful works upon the Scriptures; 1799-1855.

MANIN, Daniel, the distinguished Italian patriot, was born in 1804. When only in his seventeenth year, he was received as a doctor of law at the university of Padua. Being unable to practise as an advocate before the age of twenty-four, he devoted the seven intervening years to the study of jurisprudence, and to a translation of the Roman law. Manin married early; and in one of the most retired quarters of his native city, passed his early manhood among his family, his books, and friends. It was in this humble retreat that the future president of the Venetian republic dreamed of the emancipation of his country. Manin was the opposite of all we associate with the stock-notion of an Italian revolutionist—grave, sober, moderate, a lover of law, and a zealous supporter of order. He was never mixed up with any of the secret societies. A legist by profession, it was his aim to combat Austria with legal weapons. He seized upon the weaknesses of the imperial government, and made a handle of the laws which Austria herself had nominally granted without permitting them to be actually put in force. For Venice and Lombardy he asked a separate government, a revision of codes, an annual budget, freedom of worship, and freedom of the press. The revolution of 1848 found Manin in prison; and liberated by a decision of the tribunal, he was immediately placed at the head of affairs, and made dictator of the republic, proclaimed only a month afterwards. That Venice stood a year's siege against the power of Austria, was mainly due to the genius of Manin. After the capitulation of Venice, in 1849, Manin retired to France, where he lived a quiet life, still full of hope for the future. Health had, however, long been failing him, and the death of his wife and daughter hastened the hour that released this high-souled patriot from the tumult and unrest of earth. He was buried at Montmartre. His funeral was public, the French government, this time, abstaining from any interference.

MANNERS, Lord Charles, a Peninsular officer and member of parliament, 1780-1855.

MARIA, queen of Portugal, daughter of Pedro, the late emperor of Brazil, was born at Rio de Janeiro, 1819, and left her native country for Europe in 1828. Her succession to the crown was disputed by her uncle, Don Miguel, who declared himself king of Portugal, and contested her claims till the taking of Lisbon in 1834. Her reign was afterwards a stormy and unhappy one, disturbed by civil war and endless political intrigues, the end of which was the triumph of the duke of Saldanha in 1851. Died Nov., 1854.

MARIA ADELAIDE, queen of Sardinia, daughter of the archduke Reignier of Austria, born 1822; married to her cousin, Victor Emmanuel, 1842, who became king when his father abdicated in 1849; died 1855.

MARIA THERESA, queen dowager of Sardinia, daughter of the archduke Ferdinand of Austria, born 1801; married to Charles Albert, then prince of Savoy-Carignan, 1817; left a widow 1824; died 1855.

MARKHAM, Frederick, successor of General Pennefather as commander of the second division in the Crimea, was born in 1805, and first saw actual service in the field during the rebellion in Canada in 1837, when he was severely wounded. As lieut.-colonel, he served in the Punjaub campaign, 1848-1849, and was present at the siege of Mooltan and the battle of Goojerat. He was on his way to take the command at Peshawur, when the exigencies of the Russian war caused his recall, and he made a hasty journey into the Crimea. The previous state of his health led to his recall home after the fall of Sebastopol, and he died in London, Nov. 21, 1855.

MARTIN, John, the celebrated painter of 'Belshazzar's Feast,' was born at Haydon Bridge in Northumberland, July, 1789; died at the house of Thomas Wilson, Esq., Douglas, Isle of Man, 1854. His father, who was a teacher of fencing in Newcastle, apprenticed him to a coach-builder and painter, but the indentures being subsequently cancelled, he finally placed him with an Italian artist, named Muss, who brought him to London to assist in painting on enamel. Here he married at the age of nineteen; and with this spur to exertion he painted, as early as 1812, his first picture, 'Sadak in Search of the Waters of Oblivion,' which was sold for 50 guineas. Between this period and 1814, he produced 'Paradise,' 'The Expulsion,' and 'Clytie.' In 1818 and 1819 he painted 'Joshua' and the 'Fall of Babylon.' In 1820, 'Macbeth,' which he regarded as his most successful landscape; and in 1821, 'Belshazzar's Feast,' for which he received the premium of 200 guineas from the British Institution. His other great works date between this period and 1828; the last of the series being the 'Fall of Nineveh.' We must not omit, however, three remarkable pictures of later date recently exhibited in London, with the faults as well as the beauties of which every one interested in art must be familiar. Art-writers are generally agreed in admitting—what it is impossible to deny—the original genius and imaginative power of Martin. Among painters he well merits the appellation of a Dante or Milton,—the same mystic grandeur and supernatural terror, contrasting with exquisite touches of nature's loveliness, characterizing his productions. His pictures of 'Pandemonium,' the 'Belshazzar,' and others of similar character, are not simply striking—they are almost as startling in their effects as visions, and can never be forgotten by those who have once seen them, or even the

engravings from them, many of which were executed by the artist himself. The illustrations of Milton, for which he received 2,000 guineas, were actually drawn by him on the plates. Martin hitherto has been more popular with the public than with the critics of art, for the simple reason, perhaps, that he followed not their rules, and possessed few points of character with which they could sympathize; his talents, however, were substantially recognized by the government of Belgium, and he was elected a member of their Academy. His genius, perhaps, was essentially inventive and architectonic; in proof of which he submitted to the government, some years ago, a magnificent design for the improvement of the metropolis, including the embankment of the Thames. [E.R.]

MEDWYN, LORD, the title assumed by JOHN HAY FORBES, Esq., as a judge of the court of session, and lord of justiciary, was born in 1776 at Edinburgh. He was called to the Scottish bar in 1799, and appointed judge in 1825. Died in 1854, two years after his retirement from the bench.

MELLONI, MACEDONIO, a celebrated Italian philosopher, who several times received the Rumford gold medal. Born at Parma 1801, died at Portici in 1854.

MERLE, GIBBONS, an English journalist and author, best known as one of the editors of *Galignani's Messenger*; died 1855.

MILL, WILLIAM HODGE, D.D., a dignitary of the Church of England, professor of Hebrew, and a distinguished mathematician and Orientalist, was born in 1791. From 1821 to 1838 he resided in India, as principal of Bishop's College, Calcutta; and contributed towards the evangelization of that country a work in Sanscrit, entitled 'Christa Sangrita.' He succeeded Dr. Lee as regius professor of Hebrew in 1848. Died 1853.

MILLER, HUGH, *Author*, *Journalist*, and *Geologist*, born at Cromarty in 1802, was the descendant of a race of sailors, most of whom had made the ocean their tomb, not once during an entire century had a male member of the family been laid in the family burial vault. After many hair-breadth escapes his father ultimately met the common doom of his race, perishing in a storm off the coast of Peterhead while the subject of this brief sketch was yet only some five years of age. On his widowed mother now devolved the chief if not exclusive care and training of Hugh Miller. At the school of Cromarty the boy was no remarkable prodigy, a love of story-telling and a love of adventure were at this period his chief characteristics. Having acquired the usual education received by the peasantry of Scotland in her public schools, to which in his case was added a smattering of Latin, young Miller was sent to earn his bread at the craft of a mason, a profession in which he acquired considerable dexterity and excellence. The calling he had chosen developed the taste and furnished the opportunities of scientific investigation. In 1829, he published a small volume of poetry, but poetry was not his forte,

> "Scarce hauflins warmed wi' minstrel fire,
> An' little skilled in lear o' rhyme,"

it was manifest that he would reap but few laurels on Parnassus. His next publication, 'Scenes and Legends of the North of Scotland' at once revealed his peculiar powers. This work the late Baron Hume, nephew of the historian, a man of consummate taste and soundest judgment, said was written in an English style which he had begun to regard as one of the lost arts. About this time Hugh Miller withdrew from the drudgery of manual labour as a mason, having received an appointment in the Commercial Bank at Cromarty. In this situation he continued until called to Edinburgh to edit the *Witness* newspaper, a journal which the leading members of what was known as the evangelical section of the Church of Scotland were about to establish. The ability displayed by Mr. Miller as editor of the *Witness* is well known. The influence he exerted on ecclesiastical and educational events in Scotland was of no common order. His paper speedily attained a commanding circulation, and it is with some little feeling of pardonable pride, that in his autobiographical memoir the self-educated editor records the fact that the *Witness* was read by a greater proportion of college bred men than probably any other Scottish journal. It was in 1840 that Hugh Miller's name first began to be known beyond his native land. At a meeting of the British Association for the advancement of Science held that year in Glasgow, Sir Roderick, then Mr. Murchison, ever ready to draw attention to rising merit, gave an account of the striking discoveries recently made by Mr. Miller in the old red sandstone of Scotland. Agassiz, who was present, pointed out the peculiarities and importance of these discoveries, associating the name of the modest journalist with the wonderful fossil now known as the Pterichthys Milleri, specimens of which were then under the notice of the section. Dr. Buckland following Agassiz, said he had never been so much astonished in his life by the powers of any man as he had been by the geological descriptions of Mr. Miller. He described these objects with a felicity which made him ashamed of the comparative meanness and poverty of his own descriptions in the 'Bridgewater Treatise,' which had cost him hours and days of labour. The publication of the 'Old Red Sandstone' with the details of the author's discoveries and researches more than justified all the anticipations that had been formed. The 'Old Red Sandstone' was followed, in 1847, by 'First Impressions of England and its People,' the result of a tour made during the previous year, and suggested to him, we believe, by his partner as a fitting theme on which he might contribute a few interesting papers to the *Witness*. Parts of this work abound in the finest descriptive writing to be found within the compass of the English language. 'Footprints of the Creator,' written in reply to that fascinating and highly popular work 'Vestiges of the Natural History of Creation' still further extended his scientific fame, exhibiting its author as one not merely possessing in a high degree the purely scientific faculty, but as uniting to the most rigid scientific precision all that love of theological and metaphysical disquisition which distinguish the mental philosopher and theologian. His latest work, 'The Testimony of the Rocks,' is written in the same spirit and with the same aim as the 'Footprints of the Creator,' and has met a most unprecedented circulation; the sad circumstances of his death no doubt contributing to deepen the interest of this his latest

labour. For some years previous to his decease, it was apparent that in Mr. Miller the vital forces had been sadly overwrought. The immense literary labours he had undergone had relaxed the muscular energy of his powerful frame, and it was not difficult to detect even by his gait that the editor of the *Witness* had become the prey of those diseases which seem the heritage of the man of genius, just as surely as the gout seems the heritage of the high liver. Having conquered for himself a position, gained a most honourable competency, known as the ablest literary defender of ecclesiastical opinions dear to a large section of Scotchmen, and having earned a European reputation as the most eloquent expositor of the truths of geological science, it might have been anticipated that his sun which had hitherto shone with so lustrous a light, would yet for years to come have culminated in the horizon of human thought. But it was not to be; and in the mysterious dispensations of providence it came to pass that he, whom so many hearts so warmly loved and whose dying eyes so many thousands of his countrymen would have felt honoured to have closed, perished silent and alone. On the evening of the 23d December, though in a state when all literary work should have been forgone, Mr. Miller corrected the last proofs of 'The Testimony of the Rocks.' In the morning, that noble heart which erewhile heaved with such generous emotion, was found torn by bullets and shattered by a revolver. In a paroxysm of insanity he had done the fatal deed. Thus gloomily perished this self-tanght genius, the greatest man after Scott and Burns Scotland has produced. A collected edition of Mr. Miller's works is now being published by the Messrs. Constable, which will, we believe, include selections from his contributions, literary, ecclesiastical, and political, to the *Witness* newspaper.

MITFORD, MARY RUSSELL, was born on the 16th of December, 1786, at Alresford in Hampshire. Her father was a physician, a man of good family, and related by the marriage of a niece to the ducal house of Atholl; her mother was the daughter of a clergyman in Hants.—The student of literature might gain an instructive lesson in the art of idealizing, if he were here to institute a double comparison. The materials for it would be furnished, on the one hand, by some of the pictures which Miss Mitford has painted in her prose works; and, on the other, by the originals of the objects as they really existed, or even as they were described by the author when she ventured on disclosing a part of the truth. Dr. Mitford, if we take him even as his daughter is compelled to describe him in her autobiographical memoirs, would offer a striking contrast to the ever wise and amiable father of the half-imaginary groups: a contrast yet more melancholy would be found to separate the rural ease, and plenty, and happiness, depicted and hinted at in 'Our Village,' from the struggles and anxieties, the alternations of prosperity and distress, which made up the real history of the family. Dr. Mitford may have been, and probably was, a pleasant person in companionship; but, even from the facts reluctantly communicated by his daughter, he must be pronounced to have been, in the extreme, thoughtless, extravagant, and selfish. He received a large fortune with his wife; and he appears to have had, more than once in his life, a good professional practice. Other sums of money likewise came into his hands—the largest item being £20,000, gained in a lottery, by a ticket which, at a time of pressing difficulty, he had insisted on purchasing for his daughter, then a little girl. One supply after another disappeared nearly as fast as it was obtained; the family migrated from place to place, shifting painfully between opulence and poverty; and at length the daughter had to support, first her father, and afterwards herself, by the hard earnings of literary labour. In 1842, when Dr. Mitford died, a subscription was raised by the friends of the family; and soon afterwards Miss Mitford received a pension from the government.—In early life Miss Mitford's literary inclinations leant decidedly towards poetry and the drama. Her first publications were three volumes of poems, 'perpetrated,' to use her own good-humoured phrase, 'in less than two years,' and all published in 1806. Two of them were poetical narratives: 'Blanche, a Spanish Story;' and 'Christina, the Maid of the South Seas.' They were followed, in 1812, by 'Wellington Hall, a Poem,' which described a coursing-match, and showed the predilection for greyhounds with which the readers of her prose works have been made so familiar. Her love for dramatic poetry and acting, nourished in her childhood by a governess, whom she describes pleasingly, and strengthened, as she tells us, by her presence at performances of classical plays in Dr. Valpy's school at Reading, was allowed full scope for some years of her life. If her tragedies have not kept possession of the stage, this is no more than must be said of other poets of our age who are more celebrated. 'Julian' (1823) is really a fine drama for the closet; 'Foscari' (1826) is not much inferior; and 'Rienzi' (1828) was, for a time, very successful in the theatre. 'Charles I.' was refused a chance,—by the silly scruples which were the rule of action for George Colman, the licenser: the oriental opera of 'Sadak and Kalasrade' failed, but perhaps through the music; and several other plays, with fragmentary dramatic scenes, may be read in a collected edition.—Long, however, before the appearance of Rienzi, Miss Mitford had, fortunately (in the end) for her own fame, been compelled to step aside into other paths. In her own brave words, 'the pressing necessity of earning money, and the uncertainties and delays of the drama at moments when disappointment or delay weighed upon me like a sin, made it a duty to turn away from the lofty steep of tragic poetry, to the everyday path of Village Stories.' The vein thus happily struck by Miss Mitford, presented itself to her in an extensive and various course of contribution to magazines and annuals. The earliest of her rural sketches were refused admission into the 'New Monthly Magazine,' during Thomas Campbell's nominal editorship. They first appeared, in 1819, in no more distinguished a vehicle than 'The Lady's Magazine.' They formed afterwards the first portion of 'Our Village;' and the series was completed in five volumes in 1832. The town of Reading, near which the author lived for many of the latest years of her life, was the original of another series, 'Belford Regis,' published in 1835. A good many other stories and sketches of the

same sort are scattered through periodicals; and a few have been collected. Miss Mitford's prose pieces are wearisome to many readers, and must be so to all who crave strong excitement. They have, indeed, two sources of weakness: the lingering fondness and endless repetition with which she dilates on inanimate objects and groups; the constancy (an odd feature in a practised writer of tragedies) with which she shuns and keeps back everything that is painful or even deeply pathetic. But her descriptions have both great truth, and, for lovers of nature of a certain kind, lively interest; and over every character and incident she throws a semi-transparent veil of cheerfulness, which irradiates her pages as if with a continual flood of sunshine. It would be a curious thing to know how far she was indebted to reality, for the amiabilities, and generosities, and felicities of her personages; or how far she practised, on any or all of her originals out-of-doors, the process of beautifying which we know her to have applied to her own fireside and its occupants.—In 1852 appeared, in three volumes, Miss Mitford's 'Recollections of a Literary Life; or, Books, Places, and People.' The work contains very few personal details; but it is a remarkably pleasant series of extracts, chiefly poetical, and of light criticism, almost always laudatory, especially of her own friends. Particulars of her life were prefixed by her more fully to the two volumes of her collected dramas in 1854. In the same year, too, were published her last works, 'Atherton, and other Tales.' In her 'Recollections' she had described, with a half-comic pathos, the miseries of an invalid, compelled to quit an old and favourite, but decaying abode. In her new house, Swallowfield Cottage, not far from the former, and, like it, near Reading, she spent her last days, in the cheerful contentment natural to her character, and with all the happiness that could be made for her by many and distinguished friends. She died there on the 10th of January, 1855. [W.S.]

MITZKIEVITCH, Adam, a Polish poet, formerly professor of the Sclavonic language and literature in the college of France. Died at Constantinople, 1855.

MOLÉ, Louis Mathieu, Count, the celebrated French statesman, was descended from the old noblesse of that country, and was a youth when his father was beheaded in the reign of terror. Inheriting the talent which had rendered his ancestors illustrious, he had therefore to make his way under very different circumstances, and at the age of twenty-five published a work, 'Essai de Morale et de Politique,' which attracted the attention of Napoleon, who appointed him, together with MM. Portalis, jun., and Pasquier, one of his Maitre des Requêtes,—by which may be understood the functions of a law officer attached to the Council of State, somewhat resembling those of our masters in the Court of Chancery. In this character he was appointed, together with his colleagues, one of Napoleon's commissioners in the Grand Sanhedrim of the Jews which was convened in Paris in 1806, with the ultimate object, probably, of their restoration to Palestine, but with the preliminary view of inducing them to enter the army. After this M. Molé was made Prefect of Dijon, and while holding this appointment wrote the life of his great ancestor Mathieu Molé, who was president of the parliament of Paris during the wars of the Fronde: his subsequent honours under the empire were those of Conseiller d'Etat and Director-General des Ponts et Chaussées, with the title of Count,—supreme judge and minister of justice after the campaign of 1812, and president of the Council of Regency when Napoleon took the field in person again. In this character he remained faithful to the Empress Marie Louise, till released from his duty by the recommendation of Napoleon himself, and was then forced on Louis XVIII., who could not tolerate the renegade nobility, by Talleyrand; nevertheless, he became one of Napoleon's peers during the hundred days, and at the same time resumed his old functions of Director-General des Ponts et Chaussées, which he continued to exercise under the second restoration. In this period of his career M. Molé acted with the opposition against Polignac, and was of course a foremost man when Louis Philippe became king, who immediately appointed him foreign minister, and at a later period prime minister. The brilliancy of his reputation was now greatly enhanced by the ability with which he sustained himself against the attacks of MM. Thiers and Guizot; and as this is the most fitting place to speak of his general character, we may describe him concisely in the words of Lamartine—'a man of political temperament, of ability for a crisis, agreeable to the Court, honoured by conservatives, and loved by the superior bourgeoisie; one of those national aristocrats whose character accords with their birth, and whose native superiority wins for them honour and affection even from the most zealous democracy.'—(*Rev. of* 1848.) Like several other of the chief statesmen of France, he made what effort he could to save the monarchy in 1848, and those failing, he afterwards lived almost retired, saving that he appeared once more as auditor to the Council of State during the Presidency of Louis Napoleon. His last hopes, it is believed, were fixed on the restoration of Henry V. Count Molé died suddenly of apoplexy, Nov. 24, 1855. [E.R.]

MOLESWORTH, Sir William, justly characterized as the liberator and regenerator of our colonial empire, was born in London, 1810. He was descended from an ancient family, in whose ranks have been numbered colonial governors, courtiers, and naval officers, the barons of Pencarrow, since the time of Elizabeth. Sir William became baronet at the age of thirteen by the death of his father, and was just rising to his majority at the period of the reform agitation, in which cause he made his maiden speech at a county meeting in 1831, having recently returned from his travels on the continent. In 1832, he was returned with Mr. Trelawney as M.P. for the eastern division of Cornwall, and kept his seat till 1837, when his local influence failed to make head against the conservative feeling that prevailed: the same year, however, he was returned for Leeds in conjunction with Mr. Edward Baines. In 1841, foreseeing the defeat of the liberal interest, Sir W. Molesworth declined the contest, and, retiring a while from the bustle of political life, he girded himself, by hard political study, for future action. Southwark, in fine, had the honour of sending him to parliament in 1847,

and the same constituents have twice re-elected him,—first, in 1853, when he became first commissioner of public works; and again, on his recent appointment as secretary of state for the colonies. The laborious zeal in one great cause, the political talents, and the persevering singleness of purpose by which Sir William Molesworth at length attained this eminence, gave high promise of his administrative abilities in office; but he had scarcely time to realize his position when he was surprised by death, October 22, 1855. His early loss will be long and deeply lamented,—and by none so much as our expectant fellow-subjects in the colonies. Order and constructive ability, combined with integrity, independence, and unflinching perseverance in the investigation of difficulties, are rare political qualities, and the less brilliant some of the practical talents may be which go to make up such a character, the more unselfishness we may claim for their exercise. Another kind of tribute is still due to his memory. Sir William Molesworth is only recognized in one-half his character as a politician or statesman: he was also the cultivated philosopher and man of letters. In 1839, he commenced publishing at his own cost, and has since completed, the works of Hobbes, in a beautiful library edition, English and Latin; he has also left in MSS. the materials, far advanced towards completion, for a life of that philosopher. [E.R.]

MONTGOMERY, James, the last survivor but one, and a worthy member, though not among the greatest, of the great company of poets who glorified the first generation of our century, has recently gone to his rest, full of years, and of the honour that belongs to good men.—He was born at Irvine in Ayrshire, on the 4th of November, 1771. His parents, who were of the sect of Moravians, emigrated in his boyhood on a missionary enterprise to the West Indies, where both of them soon died. Their son was left for education in a seminary of the Brethren at Fulneck, in Yorkshire; and there he spent ten years of his early youth. Much of the plaintive and devotional sweetness which breathes through his poems may be attributed to the influence of the Moravian spirit; but the Moravian rules were far from being directly favourable to the cultivation of those literary and poetical tastes, which were early developed in his mind, and had to be indulged by stealth when yielded to at all. His superiors wisely yielded to his reluctance to the ministry, for which they had designed him; but no better place could be found for him than one behind the counter of a miscellaneous shop. Thence, after a year's servitude, he eloped, his possessions consisting of three shillings and sixpence, and a volume of manuscript poems. Starved out before being able to reach the great mart of letters, he took another place of the same sort as before, writing to his preceding master for a character, and (to the credit of both parties) receiving one, with an invitation to return. A few months afterwards he found his way to London; and, although he failed to gain a publisher for his poems, he obtained a place for himself as shopman to a bookseller in Paternoster Row. —Soon he returned to Yorkshire, and, in 1782, entered the employment of Mr. Gale, of Sheffield, a bookseller, who was also proprietor of a newspaper, then called the *Sheffield Register*. Montgomery began to write for the newspaper; and when, its politics being too liberal for the age, Gale found it convenient to quit England, his young assistant took the editorship. He re-named the print the *Sheffield Iris*, a name which in more recent times he made so respectable and so respected. In the meantime, however, troubles came over him. Although his writings are believed to have been exceedingly moderate in tone, and are very unlikely, from his character and disposition, to have been otherwise, yet the jealous government of the day prosecuted and punished him twice in the course of twelve months. In January, 1795, for having printed (not written) a song on the fall of the Bastile, he was sentenced to imprisonment for three months, and fined twenty pounds: in January, 1796, his sentence was a fine of thirty pounds, with imprisonment for six months, for having offended, by an account of a riot in the streets, a zealous volunteer officer, who was also a magistrate. These events gave birth to a short series of poems: 'Prison Amusements, written during nine months of imprisonment in the castle of York'.—Montgomery's larger poems soon began to appear: 'The Wanderer in Switzerland,' in 1806; 'The West Indies,' in 1809; and 'The World Before the Flood,' in 1812. A second series of the same class was formed by 'Greenland,' published in 1819; and 'The Pelican Island,' in 1828. A good many of his early essays in the *Iris* are said to have been collected and reprinted; and within the last thirty years have appeared his 'Prose by a Poet,' and 'Lectures on Poetry and Literature.' His prose writings, however, are of small account: nor have his more ambitious works, in verse, vitality or substance enough to float them down the stream of time. His name is preserved, and made dear to the lovers of poetry, inspired at once (a rare union) by genius and by devotion, through his minor poems of a lyrical and reflective kind. Such pieces as 'The Grave,' and 'The Common Lot,' are familiar to every one who loves poetry of a religious cast. His poetical works were collected into four volumes in 1841, and into one volume in 1850; and, in 1853, he published 'Original Hymns, for Public, Private, and Social Devotion.'—His retirement from the editorship of the *Iris* took place in 1840; and the newspaper did not long survive the loss. For the last few years of his life he possessed a government pension. He died at his house in Sheffield, April 30, 1854. [W.S.]

MONTGOMERY, Robert, author of the 'Omnipresence of the Deity' and other well known works, died at the beginning of December, 1855. Mr. Montgomery was educated at Oxford, and ordained about the year 1835. He was some time minister of St. Jude's episcopal chapel at Glasgow, but the last years of his life he rented Percy street chapel in the metropolis, where his eloquence in the pulpit and his amiable private character made him highly popular.

MOORE, Lieut.-Col. Willoughby, an aged officer memorable for the noble performance of his duty on board the transport ship Europa, which was destroyed by fire on the night of May 31, 1854, being then on her voyage to the East, and about 200 miles from Plymouth. He remained on board the burning vessel to the last, making the

best arrangements in his power for removing the men (a detachment of the 6th dragoons), and is stated to have been at length driven into the mizen chains by the violence of the flames and to have there perished.

MOORE, Mrs. Willoughby, lady superintendent of the officers' hospital at Scutari, died at her post of duty, Nov., 1855.

MORGAN, John Minter, a well-known philanthropist, author of a project for a self-supporting village, was born in 1783. His father was a wholesale stationer in the metropolis, and at his death left Mr. Morgan in possession of an ample fortune. Naturally benevolent, and desirous of active occupation, his attention was arrested by the projects of Robert Owen, on which he published his comments in a pamphlet, 1819. The year following he published his famous little work entitled 'The Revolt of the Bees;' and thenceforth, by poems, lectures, or addresses, seizing with avidity on every opportunity presented by circumstances, he sought to obtain a hearing for his plans. The essential point in which he differed from Mr. Owen was in the recognition of religious principles as the basis of his calculations. In 1842 he petitioned parliament for an inquiry into his project, entitled the 'Church of England Agricultural Self-Supporting Institute;' and, besides addressing large public meetings on the subject, he promulgated his views by the press in his 'Christian Commonwealth' His plan was received with some favour in Germany, where an opportunity existed for comparing it with the Moravian establishments, and in this country it was viewed with favour by a scattered few of the clergy. Competition was the great evil it proposed to extinguish, and therewith much of the misery that afflicts society; but the difficulty of raising a sufficient capital (£40,000 was the sum proposed), no less than the prejudices of society, and perhaps the formality that characterized Mr. Morgan's plan, ever prevented the establishment of a model institute. The projector sought what consolation he could in the hope of a better future, and published, in 1850, a series of works bearing on the renovation and progress of society, called 'The Phœnix Library,' 13 vols., 12mo; this series included the productions of his own pen, and, of course, 'The Revolt of the Bees.' Mr. Morgan died at his residence in Stratton street, Piccadilly, December 26, 1854, shortly after establishing an institution on Ham Common, called 'The National Orphan House.' [E.R.]

N

NACHIMOFF, Admiral, well known as the commander of the Russian fleet when the Turkish ships were destroyed at Sinope, in Nov., 1853. Killed at Sebastopol, July, 1855.

NAPIER, Sir George Thomas, a younger brother of the hero of Scinde, General Sir Charles James Napier, born at Whitehall, 1784, died at Geneva, September, 1855. He was in the chief actions of the Peninsula, and at the siege of Cuidad Rodrigo he lost his right arm. From 1837 to 1844 he served his country as governor of the Cape of Good Hope, since which he passed most of his time abroad. The offer of his services in the Crimean war was declined.

NEWPORT, George, a distinguished physiologist and naturalist, born at Canterbury, 1803; died in London, 1854. Mr. Newport is a good example of the benefits arising from the institution of those societies for the cultivation of literature and science, which are now so general throughout the country. Engaged as a youth in a humble business, he luckily had his mind directed to scientific pursuits through the influence of the literary society established in his native town. His taste led him to anatomical and physiological investigations, and was the means of inducing him to study medicine. This profession led him to follow still further these particular branches of study, and to the prosecution of them he ultimately devoted his whole time and attention. His numerous memoirs in the Transactions of the Linnæan and Royal Societies, and in various scientific journals of the day, established his fame as an original and acute observer, procured for him twice the Royal medal of the Royal Society, caused him to be elected President of the Entomological Society, and obtained for him from the Crown a pension of £100 per annum. His last labours were a course of patient investigations and experiments to show the changes undergone in the ovum of the frog during its development; and it was to his zeal in prosecuting these researches that he owed his death. Engaged in obtaining a supply of frogs in the marshes near London, he contracted a fever which cut him off in his fifty-first year. [W.B.]

NICHOLAS, late Emperor of Russia, brother of his predecessor, Alexander, was born in 1796, and died suddenly, of paralysis of the lungs, soon after midnight, between March 1st and 2d, 1855. The career of Nicholas is one of the most remarkable in the annals of royalty, and his character one which would have stood out grandly in other ages. Previous to his accession, the name of the Emperor Nicholas hardly belongs to history, but the first events of his reign stamped his character, and served, perhaps, to decide his policy once for all, towards his own subjects. The death of Alexander, Nov. 30, 1825, proved the signal for a widespread revolt, which menaced the throne and the existing institutions of the country; for at its head were many of the officers who had marched into Germany with the Russian army in 1812, and there became acquainted with the theories of republican and constitutional government. The conspiracy was general, extending from St. Petersburg to Kief; and, in the capital, the populace were joined by the guards, under pretence of supporting Prince Constantine, who had long before, definitively resigned the crown in favour of his brother. On this occasion the young sovereign displayed all the chivalry of his character, and as much by his personal daring as the terrible use he made of his cannon in the streets of Petersburg, awed his rebellious subjects into obedience. His coronation was celebrated with unusual pomp, Sept. 3, 1826, at which time the affairs of Greece occupied the attention of the Western powers, and made manifest the ambition and the secret designs of the Russian government: for the present, however, a settlement was effected by the treaty of London, concluded July 6, 1827, between England, France,

and Russia. In the meantime, war had broken out between Russia and Persia, in which, by the victorious arms of Paskievitch the Russian frontier was advanced to the Arras (*Araxes*), as admitted in the articles of peace signed at Turcomanchai, Feb., 1828. Thus another province was added to the Russian empire, besides which, and contrary to stipulation, she retained Talish and Moghan beyond the Arras, as a means of easier entrance into the Persian dominions. On the 4th of the succeeding April, war was formally declared against Turkey, for alleged violations of the treaty of Bucharest concluded sixteen years before, and an army of 115,000 men crossed the Pruth: the sacrifice of life on both sides was very great, but Turkey was the sufferer in her possessions, and was compelled to conclude the treaty of Adrianople, Sept. 14, 1829, which handed over to Russia the Circassian coast of the Black Sea, and was even stigmatized by Lord Aberdeen for its duplicity. The interest of these events to Western Europe was soon, however, absorbed in the greater peril created by the French Revolution of 1830, and the Czar himself was immediately occupied with the last desperate struggle of the Poles, which lasted from Nov., 1830, to Oct. 5, 1831, when the wreck of the patriot army surrendered to Rudiger and Paskievitch. This cruel and decisive conflict had hardly been terminated, when the revolt of the Pasha of Egypt against the Grand Sultan afforded the emperor an excuse for sending an expedition to the Bosphorus; at which opportunity he extorted from the Porte the clandestine treaty of Unkiar Skelessi, dated July 8, 1832, the effect of which was to close the Dardanelles against the fleets of Europe, in a word, to place Constantinople by her own act, at the mercy of the Russian fleet in the Black Sea. This event was followed by political complications of no ordinary difficulty, which, in 1840, had nearly produced a war between England and France, and led to our military operations in Syria, where the further advance of Mehemet Ali was checked by the operations of Sir Robert Stopford and Commodore Napier. The succeeding years, till 1848, were not marked by any event that we need notice in this summary, but the intrigues of the Russian government are supposed by many to have secretly fomented the convulsions of that year, and there is historical evidence, that the Czar, whatever his apparent moderation, was ever watchful of his opportunity to crush the free institutions of the West, or, as he latterly expressed it, to 'put a stop to the materialism of England.' The opportunity for a first advance was created by the peril of the Austrian government, and in July, 1848, the Russian troops were marched into Hungary in support of the house of Hapsburg, where Bem and Dembinski at the head of 20,000 Poles had joined the Magyars: the Hungarians, it is well known, were eventually defeated by the surrender of Georgey to the Russian General Rudiger, on the 11th of August, and the immediate gain of the Czar was the fall of a constitutional government, which had been perilous in close proximity with his dominions. The events of the late war are too familiar to require an extended notice, but it may be mentioned that the quarrel originated, substantially, in the assertion, by Russia, of a right to the protectorate of the Greek Church throughout the dominions of the Sultan; in support of which, part of the Russian army was ordered towards Moldavia, at the latter end of 1852. Two divisions actually crossed the Pruth at the beginning of July, 1853, the interim having been occupied by the mission of Prince Menschikoff to Constantinople, and the naval demonstrations on the part of England and France in Besika Bay. The subsequent occurrences to the death of Nicholas, are inscribed in the annals of our country in pages which can never be pronounced inglorious, whatever faults of administration, and want of leading ability, may, at the same time, have been brought to light. The sudden death of the Czar, as he stood upright in his pride, serves to mark the character of the man, whose passions could sere his brain at the same moment that he preserved his unrelenting aspect, and moved among his courtiers and subjects with the haughty bearing of a demi-god, or a hero of the ancient world. The time, however, has not yet arrived to estimate his character fairly, and it must be conceded that selfishness of a merely personal nature formed no part of it. His temper and policy were alike imperial, and all his designs tended to the advancement of the glory of his country, and the improvement of his people,—so far, at least, as such designs are compatible with the absolute manner of government. [E.R.]

NICHOLSON, GEORGE, a clergyman and theological writer, died 1819.

NICKLE, MAJOR-GENERAL SIR ROBERT, an old Peninsular officer, late commander of the forces at Melbourne, memorable for his services at Ballarat, 1785-1855.

NIXON, SAMUEL, a sculptor of London, whose principal works are 'The Four Seasons' in Goldsmith's Hall, 1803-1854.

NOLAN, LEWIS EDWARD, captain in the 15th hussars, killed in the famous cavalry charge at Balaklava, was the son of the late Major Nolan, some time vice-consul at Milan. He obtained his first commission in the army of Austria, but entered the service of his country in 1839 as ensign in the 4th foot. He was a man of varied accomplishments, skilled in many languages, Eastern and European, besides being a matchless cavalier and swordsman. In 1853 he published a work on the 'Organization, Drill, and Manœuvres of Cavalry Corps,' having first visited the principal military posts in Russia, besides other parts of Northern Europe. The fatal mistake under which the light cavalry were ordered to charge the Russian guns has been amply discussed in the public journals. Captain Nolan was killed by the first shot as he rode in advance of his men. [E.R.]

NORBURY, LORD. See TOLER.

O

O'CONNELL, MAURICE, eldest son of the celebrated Daniel O'Connell. He was called to the Irish bar in 1827, and became member for Clare in 1831 on the nomination of his father, after which he was seldom without a seat in parliament. Died in June, 1853.

O'CONNOR, FEARGUS, the chartist leader, was born in 1796, at Dargan Castle, county Meath. He was known in 1832 as one of the supporters of O'Connell, and obtained a seat in the first reformed parliament for the county of Cork. At the general election of 1835, he was elected for Cork a second time, but was unseated on the petition of Mr. Longfield: in the same year he contested, unsuccessfully, the borough of Oldham. From that period till 1847, though he was once or twice a candidate, he did not go to the poll, but he was then returned by the chartists of Nottingham, and was still member in 1852, when his mental aberration became manifest. At the time of his greatest influence, Mr. O'Connor was proprietor and editor of the *Northern Star*, a weekly journal devoted to the political interests of the working classes. It was under the direction of this journal that the movement was set afoot which resulted in the famous petition for the charter, and the gathering in London of a large body of the working classes, April 10, 1848. Though since made a subject of ridicule, there was so little sense of security in the public mind at the time, that a large provision was made for the defence of the government and the capital by the duke of Wellington; the people, however, dispersed quietly under the honest advice of their leader, and the petition was wisely abandoned when it was discovered that the mass of signatures was vitiated, by many that were either false or ridiculous. The political career of Mr. O'Connor was now at an end, and the total failure of his land scheme, followed by the unmerited disgrace and calumny to which he was subject, seem to have overturned the balance of his reason His insubordination in the House led to his committal by the speaker during the session of 1852, and he was finally consigned to the care of Dr. Tuke of Chiswick, where he died, Aug. 30, 1855. Mr. O'Connor, like many of his countrymen, was a man of violent passions, but thoroughly honest in his intentions, and so far from mercenary that his devotion to the cause he espoused left him a beggar. The remnant of his followers expressed their sense of his disinterestedness in the motto displayed at his funeral, 'He lived and died for us' [E.R.]

OCTAVIUS. See AUGUSTUS.

OLAUS, MAGNUS, an archbishop of Upsala who lived during the first half of the 16th century. He is known throughout Europe as a legendary writer, his stories of Lycanthropy, of Mermen, and similar marvels being frequently cited. An English version of his work was published in 1658.

OMMANEY, SIR JOHN ACKWORTH, K.C.B., rear-admiral of the Red, was born 1783, and died on 8th July, 1855, at his seat, Warblington House, Havant, Hants.

O'NEILL, JOHN BRUCE RICHARD, third viscount and baron, memorable as the last of the hereditary chiefs of Ulster, 1780-1855.

O'REILLY, THE HON. DOWELL, for nearly a quarter of a century attorney-general of Jamaica, and president of the legislative council there, was born in 1795; died at his residence, St. Andrew's, Kingston, Jamaica, in October, 1855.

ORMOND, JOHN BUTLER, second marquis of, distinguished for his contributions to the *Belles Lettres*, born in Dublin, 1808; died suddenly while bathing, 1854.

OXLEE, JOHN, a learned divine, remarkable for his industry and great literary capacity, born in Cleveland 1779, died 1854. He was master of 120 languages or dialects. His principal work is entitled 'The Christian Doctrines of the Trinity and Incarnation.'

P

PACIFICO, DON, well known for his claims upon the Greek government, which had well nigh provoked a war, died in London at an advanced age, 1854.

PAGET, LORD. See ANGLESEY.

PAILLET, M., a distinguished French barrister and member of the assembly, died 1855.

PAPWORTH, GEORGE, distinguished as an architect and engineer, 1801-1855.

PARK, PATRICK, a sculptor, died 1855.

PARKER, VICE-ADMIRAL HYDE, was the son of admiral Sir Hyde Parker, who died in 1807, and grandson of vice-admiral Sir Hyde Parker, who was lost in the Cato in 1782. He first entered upon active service in the navy in 1799, and attained the rank of post-captain after the expedition to Copenhagen in 1807. Since the peace he served some years on the Mediterranean station, and in 1845 commanded an experimental squadron. In 1852 he attained the rank of vice-admiral, and took office as one of the lords commissioners of the admiralty, under the duke of Northumberland; died 1854.

PARKER, CAPTAIN HYDE, son of the preceding, was born 1825, and obtained his first commission April 5, 1844. Two years subsequently he joined the Constance, 50, Captain Sir Baldwin Walker, and in 1847 obtained the rank of commander. He was entrusted with an important command as captain of the Firebrand in the Black Sea fleet, and exhibited the highest qualities of the seaman. The squadron blockading the Danube was under his orders, and in a short period the military stations and batteries which had been the chief impediments to the free navigation of the river were destroyed. In a fortnight after these achievements, Captain Parker entered the river with a boat expedition, his object being to reconnoitre a battery commanding the quarantine ground. The pinnace in advance grounded, and a destructive fire was poured upon the boats. At this moment our young hero resolved to storm the forts; and advancing at the head of his men, he received a ball in the heart, and fell dead in the arms of his coxswain. The correspondent of the *Morning Herald* thus alludes to his noble end, and sums up his character:—'Belonging to a family long distinguished in our naval annals, Captain Hyde Parker gave promise of equalling any of his race in services to his country. On receiving the news of his death, "Any one but him!" was the universal cry throughout the combined fleet. "I have no one left like him!" said our sorrowing admiral. The undaunted courage he had shown, added to his consummate ability, had already won for him a name which will not readily be forgotten. He was indeed no common man. We lament that there has passed from among us that genius which grasped instinctively questions which required from

others months of study—that strange fascination of manner which made all who came into contact with him love and yet respect him—that active intellect at home on every subject—that generous spirit far more careful for others' welfare than his own—that mind, so continually occupied in his country's service. Such was one who may perhaps be the last of his famous name. There gathered round to grace that funeral train the men of almost every nation; the strong sons of his own land—the brave children of our loved and noble ally—the dark Italians—all mingled, in martial pomp, with the troops of the Moslem, who then, for the first time, saw how France and England honour their warriors dead. But one feeling animated all, from the ambassadors and representatives of the four great nations who bore his pall, down to the Turks and Greeks who, moved far beyond their wont, gathered round us in sympathizing crowds. Even their women cast aside their wonted reserve for the moment; the tear was dropped over the fallen stranger who was to rest so far from his own land; from many a lip we heard the low murmur, "Kardesh, kardesh," "Brothers, brothers." His body was interred in the English cemetery at Pera.' It may be interesting to add that the fort against which he was gallantly advancing when he received his death-wound, was soon after in possession of his men, led by Captain Powell. [E.R.]

PARMA. Ferdinand Charles de Bourbon, duke of Parma, born 1823, was the son of Charles II. and the Princess Theresa of Sardinia, daughter of King Victor Emmanuel. His father became duke of Parma on the death of Marie Louise, the widow of Napoleon, in 1847, and abdicated in favour of his son, who assumed the title of Charles III. March 14, 1849. He was assassinated March 26, 1854, and his widow became regent during the minority of her son.

PARRY, Sir William Edward, rear-admiral of the White, was born at Bath, where his father was in practice as a physician, 1790. In 1803 he entered the navy as volunteer on board the Ville de Paris, 110, and in 1810 was commissioned as lieutenant. His first acquaintance with the northern seas was in the ordinary service, affording protection to the Spitzbergen whale fishery, and collecting observations towards the improvement of the admiralty charts. From 1813 to 1817 he was engaged in active service on the North American station, and at the close of that period was soliciting for employment in African discovery. At this time, however, the Royal Society had memorialized the government to prosecute certain discoveries in the arctic regions, and as Parry had expressed himself equally 'ready for hot or cold,' he sailed for the north with Captain Buchan in May, 1819. This expedition returned in November, 1820, and Lieutenant Parry was soon after rewarded with the rank of commander. Three other expeditions in the arctic seas were undertaken by him as captain of the Hecla; the first extending over the years 1821 to 1823; the second from 1824 to 1828, reckoning the whole period till the Hecla returned to England,—her companion, the Fury, Captain Hoppner, having been wrecked; the third, completed in 1827, in which, defiant of every risk, he advanced to the highest latitude ever reached, 82° 45'. Captain Parry was now rewarded with the honour of knighthood, and shortly after went out to New South Wales as commissioner for managing the affairs of the Australian agricultural company,—an appointment which he retained till 1834. In 1835 he became assistant poor law commissioner in Norfolk, and in 1837 was employed by the admiralty to organize the packet service. Two other functions of his extend over several years,—that of hydrographer to the admiralty from 1823 to 1829; and that of comptroller of the steam department of the navy from 1837 to 1846. In 1853 he was appointed lieutenant-governor of Greenwich hospital, shortly after his promotion as rear-admiral of the Blue. Died in July, 1855. Sir Edward Parry is the author of a small work, entitled 'Thoughts on the Parental Character of God,' besides narratives of his voyages. [E.R.]

PASCO, John, rear-admiral, memorable as having performed the duty of signal officer at the battle of Trafalgar, when Nelson gave the order, 'England expects every man to do his duty;' 1776-1854.

PAUL, Hamilton, a Scotch journalist, known as the college friend and companion of Campbell, editor of an edition of Burns, 1774-1854.

PEPE, Guglielmo, a native of Calabria, well known as a general of the Neapolitan army, and a leader of the revolutionary party in Italy, was born in 1783, and first entered the army when Murat was king of Naples. He continued in the service after the restoration of the Bourbons, and was exiled for his share in the revolutionary movements of 1820-21. In 1848 he returned to his country, and was appointed commander-in-chief of the army sent to central Italy against the Austrians. At Bologna he was ordered to return, but instead of doing so he repaired to Venice, and served as commandant till the surrender of the city in 1849. Died near Turin, Aug., 1855.

PEREIRA, Jonathan, an eminent physician, distinguished in the metropolis as a lecturer on chemistry, botany, and the materia medica, died, in consequence of an accident, in his forty-ninth year, Jan., 1853. Dr. Pereira, by his labours on the materia medica, has the reputation of having developed what was practically a new science. His 'Elements of Materia Medica' was published in its improved form in 1839.

PHILLIPS, Samuel, well known as an essayist and journalist, was the son of a tradesman, and was born in 1815. Having failed in an endeavour to carry on his father's business, he devoted his time to literature, and appeared as the author of 'Caleb Stukely,' in 1842. Subsequently he wrote for the *Morning Herald*, and was appointed literary reviewer on the *Times*. Died 1854.

PONSONBY, Lord, a diplomatist, 1771-1855.

PORTSMOUTH, Newton Fellowes, fourth earl of, M.P. for Andover, 1772-1854.

POTTINGER, Sir Henry, a distinguished English diplomatist, died 1856.

PRIULI, the surname of several Venetian doges. Lorenzo, who reigned from 1556 to 1559. Jeromino, brother and successor of the preceding, died 1567. Antonio, successor of Nicholas Donato in 1618. In his reign, that dangerous conspiracy was formed, of which St. Real has written the history; died 1623.

PROSSI, TOMMASO, one of the most disting. authors and poets of modern Italy, 1789-1854.

PUSEY, PHILIP, an eminent practical agriculturist, late editor of the 'Agricultural Society's Journal,' 1799-1855.

R

RADOWITZ, JOSEPH VON, a Prussian general and military writer, was born in 1797, and was descended from the lesser nobility of Hungary. He received his military education in France at the time Jerome Buonaparte was king of Westphalia, and commenced active service as an artillery officer in 1812. After the peace, he devoted himself to religious and mystical studies, and having enemies at court, passed some time in honourable banishment, but was recalled to Berlin in 1840, when a war with France was imminent. In the revolutionary year 1848 he retired from the Prussian service, and became a member of the national assembly of Frankfort, the eventualities of which forced him to Berlin in the character of the king's friend and minister. Died Dec. 25, 1854.

RAGLAN, LORD, late commander-in-chief of the British army in the Crimea, was born 1788, and was first known as Lord Fitzroy Somerset. His father was the fifth duke of Beaufort, his mother a daughter of Admiral Boscawen; he belonged to the highest class of the English aristocracy. Having entered the army at an early age, he was selected by the duke of Wellington to serve on his staff in 1807, and was accordingly under fire for the first time in the attack of the British upon the Danish troops, in the expedition to Copenhagen. He accompanied our great captain to the peninsula, being first appointed one of his aides-de-camp, and afterwards his military secretary. In the words of Lord Hardinge, 'during the whole period that the duke of Wellington was in the peninsula—with the exception, perhaps, of a short time when he was in England for the benefit of his health—Lord Fitzroy Somerset was at his right hand;' he was present in all the great actions of the peninsular campaign, and ever foremost in the field; at Badajoz, he was among the first to mount the breach, and it was to him that the governor delivered up his sword; at Busaco, he was slightly wounded, and at Waterloo he lost his right arm. His rank at this time was that of lieut.-colonel in the 1st foot guards. His embassies and other minor services to the state, we pass over to mention that he held the office of military secretary, at the horse guards, for twenty-five years, being from 1827 to 1852,—the year in which he was appointed master-general of the ordnance, and raised to the House of Peers by the title of Lord Raglan. Events were now ripening, which, it is impossible to deny, have shed a fresh lustre on the name of the gallant Fitzroy Somerset. In February, 1854, he was appointed commander of the forces proceeding to the East, and in the month of May succeeded the marquis of Anglesey as colonel of the royal horse guards (blue). At the beginning of May, he arrived with Lord de Ros, and the principal officers of his staff, at Gallipoli. At the end of August, and beginning of September, the allied armies were embarked for the Crimea, and at daybreak on the morning of September 19th the tents were struck, and the armies put in motion, with the view of securing the desired basis of operations, and opening a communication with the fleet. The first great battle was now fought, in which Lord Raglan displayed all the valour of his younger days; at the critical moment he dashed forward at the head of his staff, many of whom fell around him, and having crossed the bridge of the Alma, obtained a point of view which enabled him to win the victory with a less sacrifice of life than would otherwise have been possible. At Balaklava, as usual, Lord Raglan and his staff were in advance of the troops—at one moment under command of the guns of Sebastopol, at another, in front of a sudden apparition of Russian infantry. The same personal devotion marked his conduct at Inkermann, for shot and shell were falling thick around him, when Colonel Gambier received his orders to bring up the two heavy guns (18 pounders), which aided so materially to decide the fate of the day. At one moment a shell exploded in the midst of the staff, killing or wounding many. After these hairbreadth escapes, it is singular to record the death of the veteran soldier from natural causes, and the more so, that he still held the post of danger and of duty at the last hour. On the 29th of June, 1855, eleven days after the unsuccessful attack upon the Redan and Malakoff, Lord Raglan breathed his last in perfect tranquillity; a short illness, aggravated by mental anxiety, being the only prelude of his fate. His remains were brought to England. [E.R.]

RATTEE, JAMES, distinguished for the beauty of his carvings, and other enrichments in the style of mediæval architecture, 1820-1855.

REHAUSEN, BARON DE, successor of Count Bjornstjerna as Swedish minister in London, 1802-1854.

RENOUARD, ANTOINE AUGUSTIN, an eminent French bibliographer, author of a valuable annotated catalogue of books—'Annales de l'Imprimerie des Aides,' 'Elemens de la Morale,' and other works, died in Paris, aged ninety-eight, 1854.

RHODES, JOSEPH, an artist and art teacher, who had sustained his reputation in Yorkshire for more than half a century, died 1855. His figures, landscapes, and flowers, afforded equal evidence of his skill in execution.

RIDDLE, EDWARD, a mathematician and astronomer, late head master of the Greenwich Hospital schools, author of astronomical and other professional works, 1788-1854.

RIGOLLOT, MARCEL JEROME, a French physician, distinguished also as a naturalist and antiquarian, 1786-1855.

ROBERTSON, PATRICK, Lord, a judge of the court of session, author of poems, 1794-1854.

ROGERS, P. H., a landscape painter, d. 1853.

ROGERS, REAR-ADMIRAL ROBERT HEWLEY, born August, 1783, died 8th January, 1857.

ROGERS, SAMUEL, living to reach his ninety-third year, linked together in the history of English literature four successive generations. He witnessed in his old age the era of poetical interregnum, in which there is claimed for Tennyson the place of dictator: he had passed his own brightest days in the reigns of Scott, and Byron, and Wordsworth: his first volume had been printed in the

same year with the first volume of Burns: and he had even, in still earlier youth, looked up with awe to the critical throne of Samuel Johnson. Rogers was born at Stoke-Newington, near London, on the 30th of July, 1763. He was the son of a London banker, whose association with his fellow-dissenters made 'Watts' Hymns' to be the first poetical studies of the schoolboy; while his political activity may have aided in generating the poet's mildly Whiggish opinions. His life was, even for a literary man, singularly uneventful. He had neither difficulties to combat, nor misfortunes to suffer. He was accomplished, both through education, society, and foreign travel: he was always affluent, so far at least as to possess means more than sufficient for the luxurious life of a bachelor, who loved alike fashion, literature, and art; and all the days of his long life were spent in the pleasant employments of an amateur in letters and in painting and music, and of a friend or patron of literary men and artists.—His own literary productions showed, from beginning to end, a strongly imitative turn. They are the effusions of a man finely impressible by poetical ideas; decidedly not of one who could himself either create novel images, or strike out new channels of feeling. Some passages of his poems are very pleasing, seldomer through any vigorous pictures than through some touch of emotion deeper than the usual vein. But even in such passages we feel ourselves to be listening to what is merely an echo. Yet it is curious and interesting to mark how, in period after period, the echo was caught from the present as well as from the past. One characteristic, however, of the English poetry of the eighteenth century, clung always to Rogers. His verses were elaborated, both for diction and for melody, with a care which scarcely any writer of our age has dreamt of, and which most of them have despised. His principal poems were polished and repolished for years before being thrown on the world; and while there was thus gained a remarkable sweetness both of phrase and of rhythm, the charm was but too often purchased by an augmentation of that natural feebleness, from which, perhaps, the writer could hardly in any circumstances have altogether escaped.—In 1786, Rogers published, with other poems, his 'Ode to Superstition.' In it the influence of Gray is strongly perceptible: and Goldsmith was as plainly the model for his most popular poem, 'The Pleasures of Memory,' which appeared in 1792. In 1798, in his 'Epistle to a Friend,' he had still received no teaching more recent than that of Pope and his followers. Aspirations more active, but far from successful, were evinced in 1812 by the fragmentary 'Voyage of Columbus;' and his subsequent works showed still more how he had been impressed by the more energetic school, which had grown up since his youthful taste was formed. In 1814, his 'Jacqueline' was printed with Byron's 'Lara,' a companionship which proved fatal to a weakish, yet pretty tale. In 1819, appeared 'Human Life,' which many readers hold to be his best work; but surely this place is better deserved by 'Italy,' which, first privately printed, then much altered and corrected, from first to last, for ten or more years, was in part offered to the public, in 1823. Vigorous or essentially original it is not, either in imagery or otherwise; but it is full of fine taste, and of sympathy for beauty both in nature and in art, not unaccompanied with active observation; and the polishing in which the timid poet so much delighted, was here performed with even more than his ordinary skill. With this poem Rogers's authorship may be said to have closed.—During the time it lasted, he was the friend of many among the leading men of letters; Byron, Moore, and Campbell being on terms especially intimate with him. He associated much also with some of the leading statesmen of the Whig party, especially Fox, Sheridan, Lord Holland, and the Marquis of Lansdowne. But likewise, from before Fox's death, his house in St. James's place continued to be for more than fifty years a place of meeting for all who, through genius, fashion, or celebrity of any kind, could interest his curiosity and grace his classic board. Rogers's breakfasts were things especially famous. A volume of 'Table-Talk,' already published since his death, has furnished the uninitiated with some specimens of the anecdotes, oftener (it should seem) pointed than good-natured, with which he was wont to entertain his guests. The tone of his conversation is hinted in a line of Moore's Diary: 'Rogers amusing and sarcastic as usual.' He possessed a large and exceedingly choice collection of works of art, from which three paintings were bequeathed by him to the National Gallery. He was a kind patron of living artists, and spent £10,000 on illustrated editions of his poems. To literary men, also, and others in difficulties, he was generous: he relieved Sheridan's distresses; Moore was obliged to him in the crisis of his Bermuda affairs; and a loan from him enabled Campbell to purchase a share in the 'Metropolitan Magazine.'—Rogers's attendances at picture sales and exhibitions, and at operas and concerts, and those other light devices in which he whiled away his time, lasted till he was extremely old. Indeed, they were stopped only when, being run over by a carriage in the street, he received an injury which confined him to his own house for the last few years of his life. He died there, on the 18th of December, 1855. [W.S.]

ROSE, Sir George Henry, well known as having filled various diplomatic and other offices of state, author of several pamphlets; died at an advanced age, 1855.

ROSMINI, Abbe, distinguished in Italy as a writer on moral philosophy, and the founder of an order called after him the Rosminiani, 1797-1855.

ROSSI, Countess. See Sontag.

ROUSSIN, M., a distinguished French admiral, born 1781, entered the service in 1798 and was permanently employed during the war. On the establishment of peace he was engaged in scientific surveys, and in 1831 made a peer of France. He died in 1854.

ROUTH, Martin Joseph, late president of Magdalen College, and a learned writer, died in the hundredth year of his age, December, 1854. His principal works are, the 'Reliquiæ Sacræ,' published 1814-1815, and an edition of Burnet, 1823. His memory is associated with the friendship of Dr. Parr, Porson, and many other names of another generation.

ROWE, Rev. Samuel, a topographical writer and liturgist, 1793-1853.

ROWSON, FREDERICK, one of the directors of the National Freehold Land Society, author of 'The Debater,' 'The Female Poets of Great Britain,' &c., died 1855.

RUBINI, GIAMBATISTO, the famous tenor singer, was a native of Italy, born 1795. He commenced his musical career by playing the violin in the church of Romano, and made his first appearance on the stage in 1815 at Naples. In 1825 he went to Paris, and in that capital and London realized a large fortune, and acquired a brilliant reputation. Died March 2, 1854.

RUTHERFORD, ANDREW, Lord, an eminent Scottish judge, 1791-1854.

RUTLAND, JOHN HENDRY MANNERS, fifth duke of Rutland, born 4th January, 1778, died 20th January, 1857. The duke of Rutland was known as one of the best landlords in England, and was deservedly popular among his numerous tenants. His Grace took little active part in politics, but on all important questions generally voted with the conservative party.

S

SAINT ARNAUD. See ARNAUD.

SAINT HILAIRE, AUGUSTE, an eminent Fr. naturalist, distinguished for his researches into the vegetation of the Brazils and of South America, 1779-1853.

SALE, LADY FLORENTIA, widow of Major-General Sir Robert Sale, remarkable for the daring constancy with which she accompanied her husband in all his campaigns, died at Cape Town, 1854. At the period of the Cabool disasters, she became the prisoner of Akbar Khan, and afterwards gave the world an interesting memoir of her captivity. Lady Sale was in receipt of a pension of £500 a-year.

SALTOUN, ALEXANDER GEORGE FRASER, sixteenth lord, distinguished for his gallantry as a peninsular officer, and for his defence of Hougoumont at the battle of Waterloo, 1785-1853.

SAULL, WILLIAM DEVONSHIRE, well known in the metropolis in connection with popular subjects of debate, as the working man's friend, died, aged seventy-two, 1855. He was a geologist and antiquarian, and has left a valuable museum.

SAUNDERS, THOMAS, a citizen and antiquarian of London, memorable for his exertions in procuring the restoration of 'The Ladye Chapel,' in Southwark, 1786-1854.

SAVILLE. See FAUCIT.

SCHNEIDER, J. C. F., a German musician, 1786-1853.

SCORESBY, REV. DR. J. R. S. (formerly Captain William), was the son of an able and distinguished seaman in the northern whale fishery, and was born at Whitby, in Yorkshire. As chief mate of his father's ship, the Resolution of Whitby, in 1806, he sailed into the highest latitude then reached by navigators. In 1820, he published his account of the arctic regions, one of the most interesting records of maritime adventure ever written. On his retirement from the sea, Captain Scoresby entered into holy orders, and took a Doctor's degree. His discourses to seamen are of peculiar excellence. Dr. Scoresby, in the latter years of his life, enriched the *Edinburgh Philosophical Journal*, and other scientific periodicals, with valuable contributions. After a lingering illness, he died at Torbay, on the 21st March, 1857.

SELWYN, WILLIAM, an eminent lawyer, author of a valuable professional work, known as 'Selwyn's Nisi Prius,' 1774-1855.

SHADFORTH, THOMAS, lieut.-colonel of the 57th regiment, killed in the attack on the Redan fort, June 18, 1855, was the son of Colonel Thomas Shadforth, now of Sydney. He entered the army in 1825, and fell gallantly in the fifty-first year of his age. While he was highly esteemed by Lord Raglan, circumstances prove that he was equally beloved by his men, whom he kept in a remarkable state of efficiency.

SHEEPSHANKS, RICHARD, a Church of England minister, who devoted himself wholly to scientific pursuits, author of several articles on astronomical instruments, and similar subjects, in the 'Penny Cyclopædia,' 1794-1855.

SIBOUR, MONSEIGNEUR MARIE DOMINIQUE AUGUSTUS, archbishop of Paris, born 1792, assassinated by Verges, a priest, in the church of St. Etienne du Mont, Paris, in 1857.

SIBTHORP, CHARLES DE LAET WALDO, the well known member of parliament for Lincoln, and colonel of the Lincoln militia; was descended from an ancient family settled in Nottinghamshire. He was born in 1782, and first became member for Lincoln in 1826, since which he was constantly re-elected, excepting only in the year 1833. He was a staunch protestant and conservative, thoroughly honest, independent, and blunt in expressing his opinions. Died Dec. 14th, 1855.

SMECTYMNUUS. See STURSTOW.

SMEDLEY, REV. EDWARD, a learned minister of the Church of England, was the son of a minister of the same name, who was one of the masters of Westminster school. He was born in 1789, and was educated at Cambridge, where he took the degree of M.A. in 1812. Between that period and 1828, he took four of the Seatonian prizes for English poems, and published a history of the Reformed Religion in France. He also edited the 'Encyclopædia Metropolitana.' Died at Dulwich in July, 1836.

SMIBERT, THOMAS, a Scottish journalist and miscellaneous writer, died 1853.

SMITH, RICHARD JOHN, the celebrated actor of the Adelphi, was born at York, 1786, where at that time his father and mother were staying, then engaged in their professional vocation as actors. He made his first appearance as a regular actor at Sheffield, where he played the Coward in 'Douglas,' 17th September, 1804. His first appearance in London was at the Surrey theatre, in May, 1816, where he took the part of Farouche in the 'Black Forest.' His connection with the Adelphi dates from October 12th, 1829. Died in March, 1858. Mr. Smith was devoted to his profession, and possessed an antiquarian's knowledge of armour, costume, and prints.

SMITHSON, MISS. See BERLIOZ.

SONTAG, HENRIETTA, the famous soprano singer and actress, was born at Coblentz in 1805, of parents both belonging to the theatrical profes-

sion. Her wonderful talents for song were developed by a musical education at Prague, and her first subsequent appearance on the stage was at Vienna in 1820 or 1821. In 1823 and 1824 she was chosen successively by Weber and Beethoven to take a part in their operas, and finally appeared in Paris and London. Soon afterwards she was married to Count Rossi, and was thus lost to the stage. The political events of 1848 compelled her to resume her profession, and she succeeded Mdlle. Lind at her Majesty's theatre, afterwards visiting many parts of Europe and America. Died of cholera in the city of Mexico when about to appear in 'Lucretia Borgia,' 17th June, 1854.

SOUTHEY, Mrs. Caroline, widow of the late poet-laureate, to whom she was married in 1839, died at Buckland, near Lymington, in the sixty-eighth year of her age, 1854. It has been stated that she was related to the poet William Lisle Bowles; but this is an error, arising from her father's name, who was formerly a captain in the army. Mrs. Southey was a poetess, and also a graceful prose writer. She enjoyed a pension of £200 a-year from the Queen, granted two years prior to her decease.

SOWERBY, George Brettingham, an eminent conchologist; born 1790; died in London 1854. He was the son of James Sowerby, well known as the proprietor and publisher of the 'English Botany,' edited by Sir J. E. Smith. He seems to have inherited his father's taste for natural history, but it was chiefly to the study of conchology he devoted his time and attention. He dealt largely in objects of natural history, but chiefly shells; and to him is due, to a great extent, a better knowledge in this country of the celebrated Lamarck's arrangement. Mr. Sowerby contributed numerous papers on conchological subjects to the scientific periodicals of the day, and he was the originator and publisher of the 'Zoological Journal.' His principal work, however, and by which he is best known is his 'Genera of Recent and Fossil Shells,' in two volumes; but which, unfortunately, was never completed. [W.B.]

SPRATT, James, a captain in the royal navy, dist. for his gallantry in the action at Trafalgar, died at Teignmouth, aged eighty-two, June, 1853.

STANGER, William, M.D., an English naturalist, attached to the Niger expedition in 1841; 1812-1854.

STEVENSON, S. W., a scholar and numismatist, author of 'A Dictionary of Roman Coins,' and 'Travels,' 1785-1854.

STOCKS, John Ellerton, M.D., a zealous and practical botanist. Born near Hull, 1820; died 1854. Dr. Stocks held a medical appointment in the service of the East India Company, and devoted his leisure time to the study of botany. During his service in India, he was for some time inspector of forests in Scinde, and was thus led to travel much through that country and Beloochistan. He fulfilled the duties also for some time of conservator of forests and superintendent of botanic gardens in Bombay, in the absence of Dr. Gibson, who held that appointment. In the course of his official duties he had opportunities, which he did not neglect, of forming an extensive collection of plants, with a large series of drawings made by native artists, all of which he brought to this country in the beginning of 1854, along with materials, in a forward state of preparation, for a general work on the natural history, manners, customs, arts, manufactures, and commerce, agriculture, &c., of science. These collections he had commenced arranging and putting in order, when illness supervened, and he was carried off by a fit of apoplexy, in August, 1854, at the early age of thirty-four. Dr. Stocks was a man of great and varied attainments in literature, and had his life been spared, the science of botany, especially, would have been enriched by his valuable contributions. His published papers are chiefly contained in Sir W. J. Hooker's 'London Journal of Botany,' and 'Kew Garden Miscellany.' [W.B.]

STORER, James Sargeant, an English draughtsman and engraver, famous for his accurate delineations of the antiquities of our country, and for his topographical views, 1772-1854.

STRANGFORD, Percy Clinton Sydney Smythe, sixth viscount, a distinguished diplomatist and man of letters, was born 1780, and succeeded his father in the peerage 1801. In early life, diplomacy and literature divided his attention at the court of Lisbon, and his translations from Camoens at that period are warmly eulogized by his countryman, Thomas Moore. In 1808-9, when, in consequence of the Portuguese revolution, the Prince Regent removed his court to the Brazils, and thus founded the Brazilian empire, Lord Viscount Strangford was residing in Lisbon with the rank of minister plenipotentiary, and appears to have enjoyed the full confidence of the royal family of Portugal; in fine, he joined them in the emigration—one of the most remarkable circumstances of modern times—and remained many years at Rio Janeiro, performing the same functions as at Lisbon. His subsequent missions were to the court of Flanders, 1817; to the Ottoman Porte, 1820; and to St. Petersburg, 1825, where he was succeeded by Lord Heytesbury. In 1828 he went on a special mission to the Brazils, in which year Don Pedro agreed to a treaty of peace with Buenos Ayres, and acknowledged the independence of Monte Video, and the Banda Oriental: with this mission his diplomatic career terminated. Since that period Lord Strangford attached himself almost solely to literature, and at the time of his death had made a large collection of documents towards the biography of his ancestor, Endymion Porter. Died May 29, 1855. [E.R.]

STRANGWAYS, Thomas Fox, brigadier-general commanding the royal artillery in the British army in the Crimea, was born 1790, and entered the artillery service in 1806. In 1813 and 1841 he was with the allied army in Germany, and distinguished himself in the battles around Leipzig. For these services the Swedish order of the sword was conferred on him. He served also in the decisive campaign of 1815, and at Waterloo was slightly wounded. His death at Inkermann was caused by a round shot, which blew away his leg. Mr. Russell relates: 'The poor old general never moved a muscle of his face. He said merely, in a gentle voice, "Will any one be kind enough to lift me off my horse?" He was taken down and laid on the ground, while his life-blood ebbed fast, and at last he was carried to the rear. But the gallant old man had not sufficient strength to undergo an

operation, and in two hours he had sunk to rest, leaving behind him a memory which will ever be held dear by every officer and man of the army.' [E.R.]

STRUTHERS, JOHN, a minor Scottish poet and historical writer, born in Lanarkshire, 1776, died at Glasgow, August, 1853. His best poem is 'The Poor Man's Sabbath,' first published in 1804, at which time the author obtained his living as a working shoemaker. For the last twenty years of his life he held the appointment of librarian at Stirling's library, Glasgow.

STUART, LORD DUDLEY, the friend of Poland, son of John, first marquess of Bute, and of a daughter of Thomas Coutts the banker, was born in 1803. He commenced his public career at the critical period of 1830, when he became member for Arundel, of course in the liberal interest. Home politics, however, did not engage much of his attention, his enthusiasm being excited by the arrival in England, at this time, of Prince Adam Czartoryski, and the wreck of the Polish army. Lord Dudley Stuart felt that the liberties of Europe were menaced by the advance of the Russian empire, and that the restoration of Poland was the only barrier that could be raised against her; this feeling, and a deep sense of the wrongs which the Poles had endured, took full possession of his heart and mind, and dictated his whole course of action. He fought the battles of the Poles almost alone in the House of Commons, keeping his seat for Arundel till 1837, when he was defeated by Lord Fitzallan. He then remained out of parliament for ten years, and eventually, in 1847, was returned at the head of the poll for Marylebone; in 1852 he was re-elected without opposition. Lord Dudley Stuart rejected every proposal to take office, always declaring that he would accept no other than that of ambassador at the court of Warsaw. Zealous in this cause to the last hour, he left England in September, 1854, to recruit his health, and bent his steps to Denmark and Stockholm, where he might use his influence in procuring the adhesion of those powers. Though suffering from illness, he had two audiences of the king, and was so weak when he last visited the palace that he was carried up and down the stairs. These exertions, added to his extensive correspondence, proved too much for his exhausted constitution, and he expired in Stockholm on the 17th of November. The immediate cause of his death was the deposition of water in the cellular membrane of the lungs. In early life Lord Dudley Stuart passed some years in the south of Europe, and was married to the daughter of Lucien Buonaparte, prince of Canino. [E.R.]

SULLIVAN, JOHN, a member of the supreme council of Madras, distinguished for his knowledge of Indian affairs and his unflinching advocacy of the native population, died 1855.

T

THACKERAY, ELIAS, cousin to the popular author of that name, a minister of the Church of England, 1771-1854.

THIERRY, AUGUSTIN, historian of the Norman Conquest, was born at Blois, on the 20th May, 1795, of poor and humble parents. He passed through his studies with distinguished success at the college of his native town. In 1811, on quitting his college, M. Augustin Thierry entered the normal school, where, after passing two years, he was appointed professor in a provincial college. The invasion of 1814 brought him to Paris. Fired with all the ardour of youth, and versed in the most varied studies, he had as yet no particular predilection for any distinct branch of science, and his political ideas, though fervent, partook of the confusion which characterized the period. 'I yearned,' says Thierry, 'for a future, I knew not exactly what; for a liberty, whose definition, if I give it at all, assumed something of this form:—a government with the greatest possible amount of individual guarantees, and the least possible amount of administrative action.' There was at this time living in comparative obscurity in Paris, a celebrated political economist, whose Memoirs, recently published, have created a sensation in England (St. Simon). The freshness and daring scope of the views of this thinker fascinated the youthful Augustin, who, quitting the university, devoted himself with all the fervour of his nature to the study of the loftiest social problems, and attached himself to St. Simon as secretary and disciple. Thierry's co-operation with St. Simon was, however, of but short duration. In 1817, we find he has joined the *Censeur Européen*, which enjoyed the reputation of being the most important and high-minded of the liberal journals of the period. The new school of French history had not at this time raised its head. The annals of France lay utterly disfigured beneath the dull and arid nomenclature of the elder historians. Garnier, Millot, Anquetil, reigned supreme. No historian had yet thought of moving out of the beaten track, when M. Thierry, having occasion to seek in the history of the past materials for the polemics of the day, first descended into the arena, and young, ardent, and yet unconscious of his vocation and destiny, entered upon that study which resulted in the establishment of the new doctrines and the new principles. Aristocracy, assailed and dominated from the days of the Grand Monarque until the epoch of the Restoration, had yet learned nothing and forgotten nothing. With the return of the Bourbons it once more raised its voice. These were the words which, through its most eloquent champion, it addressed to new France: 'Enfranchised race, slaves wrested from our grasp—depressed people—leave was granted you to be free, but not to be noble: for us, all is of right; for you, all is of favour!' This pride of birth with which Montlosier assailed the Revolution, met in M. Thierry an antagonist 'too proud to care from whence he came.' The pretensions and insolence of Montlosier were wholly based on the old right of conquest. A century before this epoch Boulainvillier had sought to construct an historical system, based upon the distinction between the conquered and the conquerors in France. The Abbé Dubois, a man of the people, stood forward to combat the theory by nearly as great a fallacy, by denying the fact of a conquest at all. Montlosier had reproduced the theory of Boulainvillier, but he encountered an antagonist not more sincere, perhaps, than the abbe, but incomparably more able. M.

Augustin Thierry proudly accepted the fact of the conquest as the premises on which to found his claims in favour of the conquered. Not content with establishing the original iniquity of the conquest, he denounced it as the source of not merely the evils of the past, but of all present difficulties. 'The genius of conquest,' said Thierry, 'has made its mock of nature and of time; it still hovers over this unhappy country; it is under its influence that the distinctions of caste have succeeded to those of blood; those of orders to those of castes; those of titles to those of orders.' It was in the demolition of the theories of Montlosier, and defending the Revolution, that Thierry's great work, the 'Histoire de la Conqueste de l'Angleterre par les Normands,' was produced. The immense sensation which it created, is known to all in any measure acquainted with the new school of French history. The great labours to which its author had subjected himself impaired at once the health and the sight of the accomplished historian. After a journey into Switzerland, and a visit to Provence, he returned to Paris somewhat invigorated in general health, but his sight still declining, and almost blind, he resumed his labours in the field of history. At this period a young man, then unknown, but destined ere long to take a brilliant position in literature and journalism, Armand Carrel, became his secretary. Young Carrel, by his friendly earnestness of purpose, rendered the necessity of reading with the eyes of others less painful to Thierry than it had formerly been. His next publication was the 'Lettres sur l' Histoire de France.' Shortly after the appearance of this work he was elected a member of the Institute. But assailed by a nervous malady of the severest kind, he had once more to quit his beloved Paris, and betake himself to the baths of Juxenil. It was at these baths he became acquainted with and married the lady who was to alleviate his sufferings, by aiding him on his way through the evil days of premature old age. Shortly after this the Academie Francaise awarded him the Gobert prize of £400, which he held till death. Almost at the same time this honour was conferred upon him, M. Guizot recalled him to Paris to preside over an undertaking honourable alike to the historian who conceived it and the historian who directed it,—the task being to form a collection after the manner of the great Benedictine compilations devoted to the nobility and the clergy, of all the materials to be found throughout France bearing upon the history of the third estate. Combating alike blindness and paralysis, Thierry continued to the last to prosecute his favourite studies. He died in Paris, in May, 1856. His genius has been accurately summed up by one who knew him well: 'No historian, ancient or modern, has exhibited in a higher degree than he, that human sense which is the very soul of history. I mean that comprehensive sensibility, synthetic without losing aught of the true, which leads a writer to attach himself to the destiny of a whole people as to the destiny of an individual; following this people, step by step, through ages, with an interest as earnest and emotions as vivid as though he were following the steps of a friend engaged in a perilous enterprise.'

THOMPSON, WILLIAM, alderman and member of parliament for London, was born at Kendal, in Westmoreland, 1792. From 1820 to 1826 he sat in parliament as member for Callington, and from that period to 1831 he represented the city, where in the interim he had 'passed the chair,' as lord mayor. From 1832 to 1837, he was the popular candidate in Sutherland, but having changed his politics, he retired in 1841, and afterwards represented the county of Westmoreland. Died 1854.

THORN, SIR NATHANIEL, K.C.B., K.H., col. of the 3rd buffs, had been more than fifty years in the British service. He entered the army in 1802, went, in 1808, with the buffs to the Peninsula, shared in most of the engagements from that time to 1814. He was at Busaco, Badajoz, Talavera, Vittoria, the Pyrenees, Nivelle, Nive, Orthes, and Toulouse. He had just returned from his investiture as a Knight Commander of the Bath, when he was suddenly taken ill, and died at his residence, near Taunton, on the 28th January, 1857.

TORRENS, MAJOR-GENERAL SIR ARTHUR WELLESLEY, born 1809; died at Paris, where he was residing as military commissioner for this country, August, 1855. General Torrens is memorable for his gallant conduct at Inkermann, where he received a wound while cheering on his men, from the effects of which he never fully recovered. He received the thanks of parliament and was promoted in December, 1854.

TRURO, THE RIGHT HON. THOMAS WILDE, first Baron Truro of Bowes, was born July, 1782, and educated at St. Paul's school. Early in life he adopted the avocation of his father, who was a solicitor, but ultimately he relinquished it for the higher branch of the same profession. He was called to the bar by the Hon. Society of the Inner Temple, in 1817, and rose to great eminence as a *nisi prius* advocate. After a singularly rapid rise at the bar, he was appointed solicitor-general in 1839, and in 1841 he became attorney-general. In 1846 he was raised to the bench as chief justice of the court of common pleas; in 1850 he became lord chancellor, and was created a peer with the title of Baron Truro. In politics Lord Truro was a strenuous supporter of the whigs. His powers as a debater were very superior. Lord Truro died on the 11th November, 1855, at his residence, Eaton square, London.

TULK, CHARLES AUGUSTUS, a magistrate of Middlesex, author of several religious works, 1786-1849.

TYLDEN, WILLIAM BURTON, brigadier-general in the royal engineers, died of cholera in the Crimea, September 22, 1855. He was honourably mentioned by Lord Raglan after the battle of the Alma; and it was owing to his exertions that Varna was saved from destruction when the powder magazines were in danger of ignition.

U

URE, ANDREW, M.D., F.R.S., was born in Glasgow, in May, 1778, founded the Observatory of Glasgow, author of 'Ure's Dictionary of Chemistry,' and other well known works. Since 1830, Dr. Ure resided in London, where he died on the 2d January, 1857.

UXBRIDGE, EARL OF. See ANGLESEY.

V

VALPY, ABRAHAM JOHN, famous for his editions of the classics, died in his sixty-eighth year, 1854.

VAN EYCKEN, JOHN, a distinguished painter of Belgium, died in Brussels, Dec., 1854

VEDDER, DAVID, distinguished as a poet and graceful prose writer, was born in the Orkneys, 1790, his father being a small laird in the island. Left an orphan at an early age, he became a seaman, but at the age of thirty took a situation on land as tide surveyor, and remained in the service of the customs till about two years before his death. His works are, the 'Covenanters' Communion,' 'Orcadian Sketches,' 'Lays and Lithographs,' and his popular translation from the German of 'Reynard the Fox.' Died 1854.

VICO, LIEUT.-COL., joint commissioner for France with Lieut.-Col. de Lagondie, at the headquarters of the British army in the Crimea, died before Sebastopol, July 10, 1855.

VISCONTI, M., a distinguished French architect, died 1854.

VOROSMARTY, MICHAEL, a famous Hungarian poet, 1800-1855.

W

WADMORE, JAMES, a well known patron of the fine arts, possessor of many great works of the old masters, and some fine pictures by Turner; 1782-1853.

WAKEFIELD, EDWARD, author of 'Ireland, Political and Statistical,' died at Knightsbridge in his eighty-sixth year, May 18, 1854.

WALKER, R. F., an Oriental scholar and translator from the German, died 1854.

WALLICH, NATHANIEL, a celebrated botanist, born 1796; died in London, 1854. Dr. Wallich was a Dane by birth and parentage, and served in early life in the Danish settlement of Serampore in India. At the conquest of that place by the English, he was allowed to enter the E. I. Co.'s service, and being a devoted botanist, he obtained the appointment of superintendent of the botanical garden at Calcutta. He was the author of the 'Flora Indica,' and the 'Plantæ Asiaticæ Rariores.' The former work was written while he was in India, in conjunction with the celebrated Dr. Cary, and the latter was published by him after his coming to England. It is in three folio volumes, with 100 coloured plates, and is a monument of labour and perseverance. [W.B.]

WALWORTH. See RICHARD II.

WARNEFORD, S. W., a clergyman, distinguished as a benefactor to colleges and schools, 1763-1855.

WARNER, MRS., the celebrated actress, was born in Dublin, where her father was in business as a chemist, and when only fifteen years of age took a part with Macready at the Plymouth theatre. In 1836, she was engaged in Drury Lane by Mr. Bunn, and obtained great success in the 'Wrecker's Daughter.' She was afterwards engaged at the Haymarket, and in the Patent theatres (when under the management of Mr. Macready), where she divided the Shaksperian drama with Miss Faucit. At Saddler's Wells she was associated with Mr. Phelps in sustaining the legitimate drama, and subsequently made a similar effort at Marylebone. Died of cancer in the breast, Sep. 25, 1854. MRS. Warner was the last great actress of the English stage, and is still without a successor.

WARNER, SAMUEL ALFRED, well known as Captain Warner, was a master in the royal navy, and the son of a master mariner. His famous invisible shell was the subject of an experiment in 1841, at which Sir Robert Peel was present, and again, in 1844, off Brighton, when the 'John o'Gaunt,' a vessel of 800 tons measurement, was blown to pieces. A government commission had previously decided against his claims, and his 'long range' was never brought to trial. Nothing certain is known of his inventions by the public, but they are regarded as the offspring of monomania. Captain Warner died suddenly of apoplexy in 1854.

WAT TYLER. See RICHARD II.

WATSON, JOSHUA, well known as a devoted and learned lay member of the Church of England, born in London 1776; died at Clapton, January 30, 1855. Few men in recent times have equalled Mr. Watson in their devotion to the charitable uses and institutions of the church, or in the capacity to serve her. Mr. Watson was alike prodigal of his money, his influence, and his special talents in the cause he loved.

WATSON, WALKER, 'the poet of Kirkintilloch,' author of 'Jockie's far awa,' and many well known popular songs, died at an advanced age, 1854.

WEBB, PHILIP PARKER, an author of several works on botany, remarkable for their scientific accuracy, and the extensive reading displayed in them, 1792-1854.

WEST, WILLIAM, formerly a bookseller, author of several county histories, and of an amusing work, entitled his 'Recollections,' 1770-1855.

WHARNCLIFFE. See WORTLEY.

WHISH, SIR W. SAMPSON, a gallant general in the service of the E. India Company, 1787-1853

WHITTAKER, JOHN WILLIAM, a controversial divine, author of several learned works, and an interesting essay on Ancient Etymologies, 1790-1854.

WILDE. See TRURO.

WILKE, JOHN, a member of parliament, best known as a collector of books and autographs, 1765-1854.

WILLIAMS, EDWARD, the once celebrated *Iolo Fardd Glas*, a Welch bard and writer, died in the workhouse of Pen-y-bout, Glamorganshire, at the advanced age of eighty, 1854. He was by trade a cooper, and adhered to it as a means of gaining his livelihood till the infirmities of age rendered it impossible to do so any longer.

WILLIAMS, JOHN, member of parliament for Macclesfield from 1847 to the last general election, 1851, when he was defeated by Mr. Egerton. Born of poor parentage in Denbighshire, 1799; died suddenly, Nov. 29, 1855.

WILLIAMS, S., a wood engraver and designer, celebrated for his illustrations in periodical and other works, born at Colchester, 1778; died 1854.

WILSON, HARRY BRISTOW, D.D., an anti-

quarian and religious writer, was born in London 1774, and in early life was appointed one of the masters of Merchant Tailors' School, of which institution he afterwards wrote the history. In 1816 he became rector of the united parishes of St. Mary, Aldermary, and St. Thomas the Apostle. In this living he remained till his death, Nov. 21, 1854.

WILSON, JOHN, a celebrated landscape and marine painter, born in Ayr, 1774; died at Folkestone, April, 1855.

WINDUS, THOMAS, an antiquarian and collector of articles of vertu, 1797-1855.

WING, WILLIAM, late secretary to the Entomological Society, and a clever delineator of the objects which engage the researches of that body, 1827-1855.

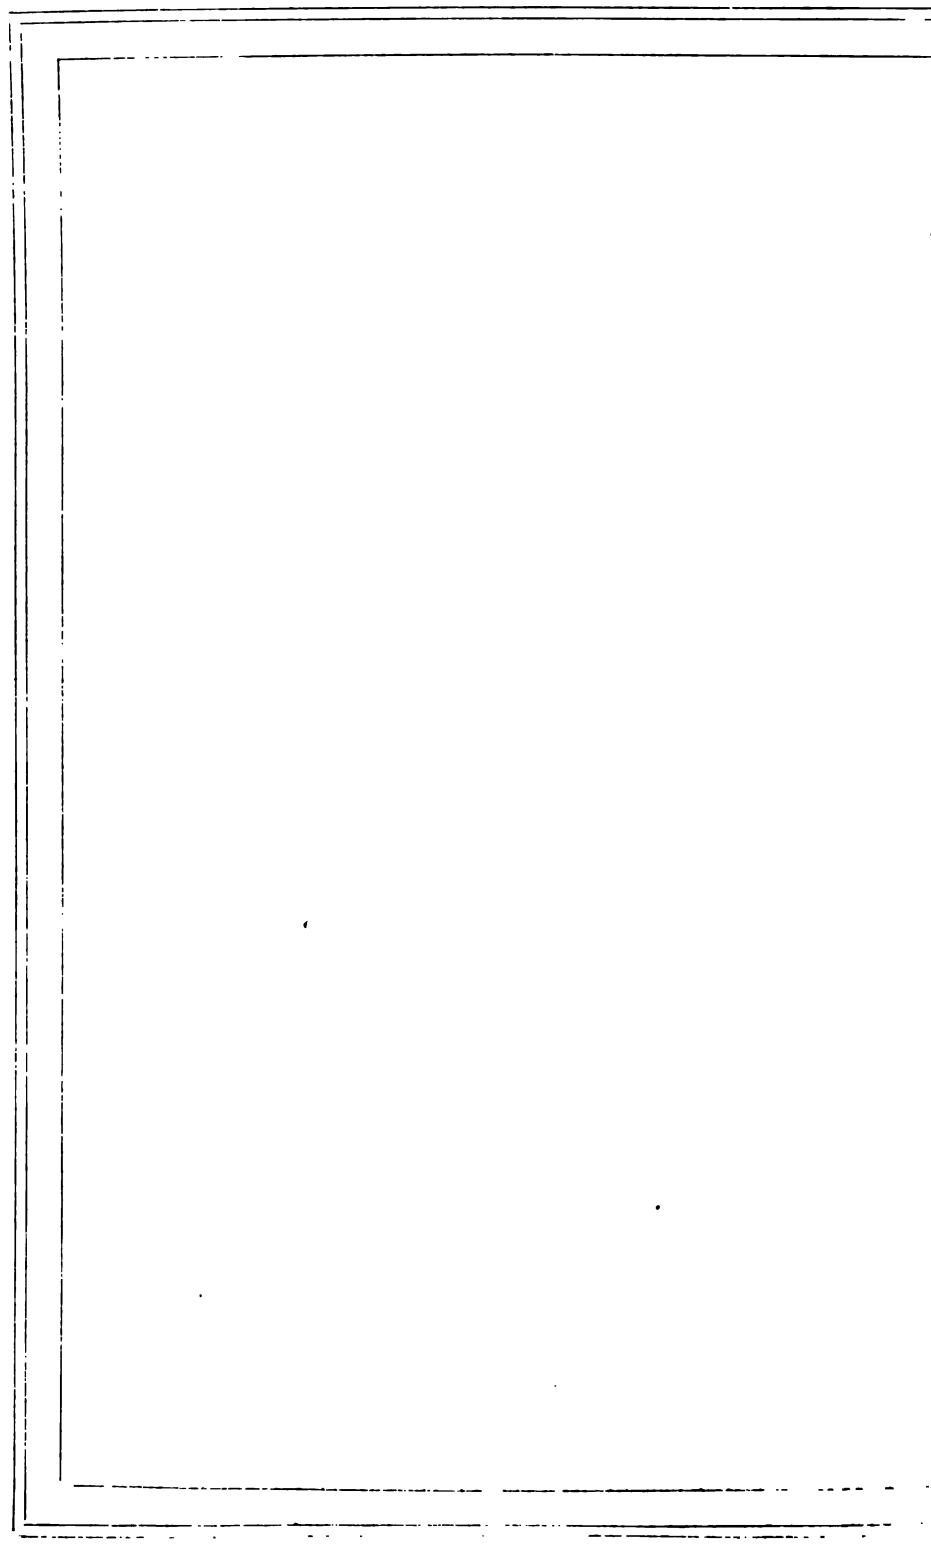
WORTLEY. JOHN STUART WORTLEY, Baron WHARNCLIFFE, born 23d April, 1801. Was member for the West Riding, Yorkshire, from the general election in 1841 to the period of his accession to the peerage in 1845. Since that time he devoted himself mainly to agricultural improvements. His death took place at his family mansion, in October, 1855.

WRIGHT, FANNY, once celebrated as a Socialist and political agitator, was born at Dundee in 1796, first attracted public attention by her book, published in 1818, entitled 'A Few Days in Athens,' and about three years afterwards gave the world her 'Views on Society and Manners in America.' In 1825 she returned to that country, and founded a colony of redeemed slaves; she even, in 1833, appeared as a public lecturer, and 'Fanny Wright societies' sprang into existence. Her establishment being broken up, she joined Robert Owen at New Harmony and edited the 'Gazette,' but contracted an unhappy marriage with a M. Darusmont. Died at Cincinnati, 1853.

Y

YATES, JOSEPH BROOKS, a presbyterian minister, archæologist, and man of letters, many years resident in Liverpool, 1780-1855.

YEA, LACY WALTER GILES, lieut.-colonel of the royal fusiliers, was the eldest son of Sir Walter Yea, and was born in Bristol, 1808. He entered the army in 1825, and won his earliest and last laurels in the Crimea. He commanded the first brigade of the light division, the advance of which at the battle of the Alma makes one of the most tragical chapters in the history of the war. The correspondent of the *Times*, who records in what confusion they advanced, relates also, 'The 7th fusiliers, led by Colonel Yea, were swept down by fifties' (letter of September 21st); and in commenting on his death passes the highest eulogiums upon him: 'A more thorough soldier, one more devoted to his men, to the service, and to his country, never fell in battle. . . . At the Alma he never went back a step, and there were tears in his eyes on that eventful afternoon when he exclaimed to me, when the men had formed on the slope of the hill after the retreat of the enemy, "There! look there! that's all that remains of my poor fusiliers! A colour is missing; but, thank God, no Russians have it!"' He fell dead under a shower of grape shot after leading his men out of the trenches on the fatal 18th of June, 1855. [E.R.]



DICTIONARY

OF

COTEMPORARY BIOGRAPHY.

ABBOTT, JACOB, American writer, born at Hallowell (Maine), in 1803, studied at Bowdoin College. In 1825 he commenced the publication of that series of works, moral and religious, with which his name has now become identified—of which 'The Corner Stone,' 'The Way To Do Good,' and his illustrated 'Histories,' are the best known. The college of Andover conferred upon this popular writer the title of D.D. Precision and clearness are the grand characteristics of Abbott's style.

ABD-EL-KADER was born in the neighbourhood of Mascara, in 1807. At a very early age he successfully opposed the French in their attacks upon Algiers. His first battle was fought in 1832, and the last in October, 1843. During that period he was alternately the ally and the foe of France. In his wars with that powerful state he managed to gain followers, and to inspire them by preaching the propriety of fighting for the faith of their fathers, and not submitting themselves like cowards to the Christians. In consequence of the skilful and energetic operations of Marshal Bugeaud he was completely reduced. In December, 1843, he submitted himself to General Lamoriciere. He was well used by the French officials in Algeria, but in spite of the pledge of the Duke d'Aumale, those of them nearer home confined him in the castle of Pau. The present emperor set him at liberty in 1852. In 1853 and again in 1855 he visited Paris, and was quite a *lion* amongst the Parisians.

ABDUL-MEDJID, reigning sultan of Turkey, was born April 23, 1823, and is the eldest son of Mahmoud II., whom he succeeded on the 1st July, 1839. His father, it is said, desired that he should receive a European education; but the opposition of the Mohammedan priests prevented the desire from being carried out. Abdul-Medjid ascended the throne of his ancestors at a most critical epoch in the history of Turkey. The battle of Nezib had just been fought. The pasha of Egypt seemed to have beaten down the might of the Ottoman empire. The road to Constantinople was open to Mehemet Ali. In this critical juncture the leading European powers interfered, to prevent the dismemberment of the dominions of the sultan. The pasha of Egypt refusing to accede to the terms of the treaty of London, signed July, 1840, his obstinacy was ultimately brought to reason by British cannon. Several of the fortified towns of Syria were successfully bombarded, and Mehemet Ali was compelled to submit. It had been anticipated by the adherents of the old system of things in Turkey that those reforms initiated under the stern rule of Mahmoud would be prevented under his somewhat facile successor. But a decree, published in November, 1839, by the present sultan, gave solemn sanction to the reforms of his father, even adding something to these reforms. The result of this proclamation was a conspiracy to upset the government. The conspiracy was, however, detected, its ringleaders put to death, and tranquillity restored. It is unfortunate, however, that the reforms which it has been sought to introduce in Turkey have, practically speaking, been carried out nowhere, except in Constantinople and its immediate vicinity. As connecting itself intimately with late important events in the career of the sultan, it is worthy of note that religious liberty has been very fully enjoyed under his sway, neither of the powers that quarrelled over the guardianship of the holy places exhibiting anything approximating to the same toleration of opinion. The history of the contest of which the protection of the holy places was the occasion, as it forms no part of the personal biography of the sultan, demands no further notice here. The earl of Carlisle, who enjoyed a personal interview with Abdul-Medjid, has described him as feeble, unstrung, doomed, with no energy of purpose. But his refusal to surrender the Polish and Hungarian refugees of 1848, even in presence of the menaces of Russia and Austria, evinced a resolution which ultimately America and England became emulous to second. The war exhausted and impoverished Turkey. Efforts to introduce economy into the administration are being made, with, however, but indifferent success. Educated in the harem, the good intentions of the sultan are to a great extent neutralized by the pernicious influence of early associations. Too prone to leave matters of expenditure to the direction of his servants, the public treasury is often plundered even by his most familiar friends. The arms of England and France preserved the sick man from the suspicious attentions of Russia; but time alone will show whether permanent convalescence may be hoped for.

ABERDEEN, EARL OF, was born in 1784, succeeded his grandfather to the Scottish honours in

1801, and obtained the viscounty in 1814. He has held several of the highest offices under the crown. Once prime minister. Has a great taste for the fine arts, and in all such matters takes a lively interest. Was married twice. By his first marriage had no family, by the second has four sons and one daughter.

ADALBERT, Henri Guillaume, prince of Prussia, and cousin-german to Frederick William IV., born at Berlin, 29th October, 1811. At an early age he entered the corps de l'artillerie of the Prussian army. Subsequently he has devoted himself to travel, visiting nearly every kingdom of Europe. In 1848 he assumed the duty of organizing the national marine of Prussia, of which he was constituted commander; and in that capacity, in 1856, led an expedition against the Riff pirates.

ADAMS, John Couch, born in Cornwall in 1817. His father was a farmer, but Adams had no love for his father's calling. Cultivated a strong taste for mathematics. By some he was reckoned the discoverer of the planet Neptune. This honour, however, was accorded to M. Le Verrier instead. He spent a considerable time studying the perturbations of Uranus, but he again permitted himself to be deprived of the honours resulting from the discovery of the cause of these perturbations by the same French philosopher. He has recently been appointed to the chair of mathematics in the university of St. Andrews.

AGASSIZ, Louis, a distinguished naturalist, b. in 1807 at Motiers in Switzerland. He very early discovered great proficiency in science. He studied medicine, and at the university of Munich took the degree of M.D. He published several interesting works in natural history. Subsequently he went to the United States of America, where he at present fills the chair of comparative anatomy in the university of Charleston, and is considered one of the first naturalists of the day.

AINSWORTH, William Harrison, was born in Manchester in 1805. Was originally intended for the law by his parents. In consequence of strong literary predilections this course was abandoned, and he devoted himself entirely to literature. His great peculiarity as a novelist was his abandoning the ordinary staple of such productions—love, and betaking himself to the illustration of felony. The grand climax of his stories were not a good marriage and profitable settlement, but the gallows and Tyburn. Mr. Ainsworth has also ventured a great deal in periodical literature.

AIRD, Thomas, was born at Bowden, Roxburghshire, 28th August, 1802. A poet of considerable genius. Has been occasionally connected with the press in various parts of the country. Was a contributor to Blackwood, and in 1852 edited an edition of the select poems of Dr. Moir (Delta), with a memoir of the Doctor prefixed. Mr. Aird is editor of the *Dumfries Herald*.

AIRY, George Bidell, D.C.L., M.A., born at Alnwick, Northumberland, 27th July, 1801. In 1826 was appointed Lucasian professor in Trinity College, Cambridge. In 1828 was appointed to the Plumian professorship; part of his duties were to take care of the university observatory. In 1835 was appointed astronomer royal. He contributed to the *Encyclopædia Metropolitana*, and has written several very useful papers on important branches of science,—gravitation, the disturbance of the compass in iron-built ships, as well as the results of some very interesting pendulum experiments in Harton coal mine, near South Shields.

ALBERT, Franz-August-Karl-Emanuel, prince consort, and duke of Saxe Coburg-Gotha, and consort of queen Victoria, was born August 26, 1819. Prince Albert was educated with his elder brother, the present duke regnant of Saxe Coburg-Gotha, under the consistorial councillor Florschutz, and subsequently at the university of Bonn. His studies there included the languages, history, the physical and natural sciences, music and painting. Prince Albert was married to queen Victoria in 1840, at St. James's Palace, having a few days previous to that event been naturalized by act of parliament. Almost immediately after his settlement in England, the prince read a course of constitutional history and law, with one of our most eminent legists. Prince Albert has kept himself aloof from party politics, but on all social questions he has ever taken a warm interest. As head of the fine arts commission, and as chairman of the council of the Great Exhibition, his services were invaluable. The prince is a field marshal and a colonel of the grenadier guards.

ALBONI, Marietta, the most distinguished contralto of the day, born at Citto di Castella in 1826, married Count Pepoli in 1853.

ALCOCK, Joseph François, French magistrate, was a member of the liberal opposition to the Bourbon government. At the revolution of July, 1830, he was nominated by Dupont de l'Eure 'president du tribunal de premiere instance de Roanne.' In the following year he was elected a member of the chamber of deputies. In 1837 he was nominated councillor of the royal court of Lyons. At the revolution of February, 1848, M. Alcock became procureur-general of the court of appeal in Lyons, and in May, 1849, was nominated a councillor in the court of cassation.

ALEXANDER II., surnamed Nicolaewich, the present emperor of all the Russias, was the eldest son of the late emperor Nicholas and the empress Alexandra Feodorowna, or, as she was called before her marriage with the emperor Nicholas, the princess Frederica Louisa Charlotte Wilhelmina, sister of the present king of Prussia. Alexander was born 29th April, 1818, and was highly educated. At a very early period he entered the military service, but never has exhibited any special military genius. In 1841 he married the princess Marie of Hesse. As crown prince he was represented as opposed to the warlike policy of his father; and the measures he has since adopted for the development of the arts of peace and the elevation of the serfs of Russia, would seem to indicate that he has become inspired with a conviction that peace hath her victories not less renowned than war.

ALFORD, Rev. Henry A., B.D., poet and biblical critic, was born in London in 1810, and educated at Ilmenster grammar school and Trinity College, Cambridge. His first effort in verse was a volume entitled 'Poems and Poetical Fragments,' published at Cambridge in 1831. In 1835 'The School of the Heart, and other Poems,'

appeared, in two volumes. In 1834 Mr. Alford was elected a fellow of Trinity College, Cambridge, and from 1835 to 1833 was vicar of Wynewold, Leicestershire. In 1841-2 Mr. Alford was Hulsean lecturer in the university of Cambridge, and in 1844 he published an excellent edition of the Greek New Testament. Since 1853 Mr. Alford has been officiating minister of Quebec street chapel, where he enjoys a high reputation.

ALDRIDGE, IRA, negro actor, born 1805, is the son of a negro chief in the interior of Africa. Destined for an ecclesiastical career, he was trained in New York as a protestant missionary, but the passion for the drama growing upon him, he made his debut in that city as an actor. His appearance was an ovation, but his performances being subsequently interrupted by the police, he visited England with the view of again devoting himself to theological studies. But once more the stage vanquished the pulpit, and he appeared as 'Othello' with great success. Subsequently he received an engagement from the manager of Covent Garden, and since then has performed, not only in the metropolis, but in all the chief cities and towns of Great Britain, and also in all the capitals of the continent.

ALISON, SIR ARCHIBALD, Bart., was born in 1792 at the parsonage house of Kenley, Shropshire. He was educated at the university of Edinburgh, where he carried away some of the highest prizes both in the mathematical and Greek classes. In 1814 he passed as an advocate at the Scottish bar. In 1834 he was appointed to the responsible judicial situation of sheriff of Lanarkshire. He has written several interesting and important treatises, but the great work of his life has been the 'History of Europe.' This work is the result of fifteen years' travelling and study, and fifteen more of composition. He is now engaged on a continuation, bringing the work down to our own times.

ALVAREZ, JUAN, Mexican general, b. 1780.

ANDERSEN, HANS CHRISTIAN, was born 2d April, 1805, at Oderse. His parents being poor, were unable to give him a liberal education. While young he conceived a great love for a player's life. He went to Copenhagen in 1819, but his rude appearance and want of education insured his rejection at the theatre of the capital. He ultimately came under the notice of Counsellor Collin, who succeeded in getting him admitted to the government gymnasia. From this school he went to college, and afterwards travelled into several continental countries. He has written about thirty-five volumes of novels, the most of which have been translated into German, Dutch, English, and Russian.

ANDERSON, WILLIAM, LL.D., born at Kilsyth in 1803, a popular Glasgow preacher, and author of various polemical works.

ANTHON, CHARLES, LL.D., was born in the city of New York, in 1797. In 1811, after receiving an excellent preliminary training, he entered Columbia College, and graduated with distinguished honours in 1815. In 1820 he was appointed adjunct professor of languages in Columbia College, which he held for some fifteen years. Almost immediately after this appointment he undertook the preparation of a new edition of 'Lempriere's Classical Dictionary.' In 1835, in connection with the publishing house of the Messrs. Harper, Professor Anthon projected and edited a classical series which includes all the more important Greek and Latin authors.

ANTONELLI, CARDINAL, secretary of state in the government of the pope, was educated at the Romish seminary founded by Gregory XVI. He assumed the purple a little before the election of Pius IX. The cardinal belongs to the reactionary party, and from his superior force of character is understood to exert a powerful influence upon the present pontiff.

ARAGO, ETIENNE, a journalist, brother of the late eminent astronomer of the name, was born at Perpignan, Feb. 7, 1803. Studied at the college of Sorreze, and held during the period of the restoration an appointment in the polytechnic school, which he resigned to enter upon a literary career. In 1840 he connected himself with the Paris press, writing for the *Siècle* and the *National*. He was also one of the founders of the *Reforme*, in which he was a copious writer.

ARGYLL, GEORGE JOHN DOUGLAS CAMPBELL, duke of, was born in 1823, is the son of the seventh duke. When marquis of Lorn, and at the early age of nineteen, he entered the arena of ecclesiastical controversy, by publishing a 'Letter to the Peers from a Peer's Son,' discussing the question of non-intrusion. In 1847 the marquis of Lorn succeeded his father in the dukedom, in the sheriffdom of Argyllshire, and as master of the queen's household in Scotland. In 1848 he published 'Presbytery Examined,' a production originally meant as a contribution to one of the quarterlies, but which, having grown too bulky for its original purpose, was published as a separate treatise. The work is a good defence of Presbytery against the assaults of the Puseyite prelatic party in Scotland. In 1852 the duke of Argyll took office under Lord Aberdeen as lord privy seal; and in 1855 he became postmaster-general under Lord Palmerston. In 1844 he married the eldest daughter of the duke of Sutherland, Lady Elizabeth Georgiana Gower. As a popular lecturer the duke is much esteemed; as a statesman he has not yet secured that position which might have been anticipated from his general capacity.

ARNOLD, MATTHEW, poet, son of the late Dr. Arnold of Rugby, was born on the 24th December, 1822, educated at Rugby and Oxford. As a poet, Mr. Arnold has no sympathy with what has been designated the spasmodic school. The classical, not the romantic, is his admiration, and his poetry appeals rather to the intellect than the passions. Mr. Arnold is at present one of the government inspectors of schools.

ARNOT, NEIL, M.D., an eminent physician, born at Dysart in 1788, author of several scientific works.

AUBER, DANIEL F. E., was born at Caen, Normandy, 29th January, 1784. His father was a printseller. At the age of twenty he was sent to London to learn something of his business; but he returned, not to follow out the business, but to become a music composer for the stage. In this line his pen has been most prolific, and his reputation universal. His most popular operas are 'Masaniello,' and 'Fra Diavalo.'

AUERBACH, BERTHOLD, a German litterateur, born at Nordstetten in 1812.

AYTOUN, WILLIAM EDMONDSTOUNE, was born in 1813, and educated at the seminaries of Edinburgh. In 1840 he was admitted to the Scottish bar, and in 1845 was appointed professor of rhetoric and *Belles Lettres* in the university of Edinburgh. He has written a great deal of poetry, principally ballads. He was also a contributor to Blackwood. In 1856 he published a long poem entitled 'Bothwell.' In the early days of his career he belonged to the liberal school of politics; but he has gradually veered round to that of conservatives. As a token of gratitude for this happy change, Lord Derby, in 1852, appointed him sheriff and vice-admiral of Orkney.

B

BABBAGE, CHARLES, was born in 1790, and educated at Trinity College, Cambridge. He devoted himself entirely to the study of mathematics and mechanics. He travelled through England, and over the continent, inspecting wheels, levers, valves, &c. In 1821 he undertook to direct the construction of a calculating machine. By 1833 a portion of this machine was put together, and performed its work with all the precision which had been predicted of it. But since that it has been allowed to stand still, although it cost the enormous sum of £17,600. In 1828 Mr. Babbage was called to fill the chair of mathematics in Trinity College. He has written several scientific treatises. In politics he is decidedly liberal.

BACK, SIR GEORGE, F.R.S., was born at Stockport, Cheshire, on 6th Nov., 1796. He entered the royal navy, as midshipman, on board the 'Arethusa,' in 1808. He was at several naval engagements; but the great work of his life, and for which he displayed a peculiar aptitude, has been travelling in the arctic regions. Since 1837 he has been permitted to live on half-pay; was knighted in 1839.

BAEHR, JOHN C. FELIX, was born at Darmstadt, on the 13th June, 1798. A voluminous author of historico-philological works.

BAILEY, PHILIP JAMES, author of 'Festus,' &c., was born at Nottingham, April 22, 1816. After receiving the education afforded by the public schools of his native town he proceeded to Glasgow, and matriculated at the university of that city. In the autumn of 1833 he entered the offices of a solicitor in the Temple, with whom he remained some two years. Subsequently he was admitted a member of Lincoln's Inn, and was called to the bar by the benchers of that ancient society in 1840. His 'Festus,' published by Pickering, met with a generally enthusiastic reception in Britain and America. Mr. Bailey has since published the 'Angel World,' 'The Mystic and the Age,' a satire.

BAILY, EDWARD HODGES, R.A., was born at Bristol, 10th March, 1788. He was educated for commercial pursuits, but at the age of sixteen he abandoned the counting-house, and became a wax modeller. In this he succeeded beyond his expectation. He went to London and was favourably received by Flaxman, and commenced to work in his studio. Mr. Baily has produced a great number of very fine statues, &c., 'Eve at the Fountain,' 'Eve Listening to the Voice,' &c. His fame is European.

BAINES, MATTHEW TALBOT, born at Leeds, in 1799, second son of the late Mr. Baines, proprietor of the *Leeds Mercury*, and M.P. for Leeds. After passing through his primary studies he entered Trinity College, Cambridge, where he obtained the first prize for eloquence. In 1825 he was called to the bar by the benchers of Inner Temple. At the bar he soon acquired a conspicuous position as one of the first of pleaders. His great reputation at the bar opened for him the doors of the senate; and his parliamentary ability secured for him a place in the government of Lord Palmerston. From 1849 to 1855 Mr. Baines was president of the poor law board, and never were the affairs of that organization better managed than during his presidency. As a politician, Mr. Baines, without being exactly a radical, belongs to the more advanced than merely whig school. In common with the other members of the Baines' family he takes a deep interest in the educational advancement of the people.

BALFE, MICHAEL WILLIAM, was born in Dublin, 1808. Before he was five years of age he began to discover great love for music. He received his first lessons from Mr. Meadows, band master of an infantry regiment lying at Wexford. In less than three months he acquired such a facility on the violin, that his master requested his father to place him under more experienced tuition. He became a first violinist, performed as such in several of the principal London theatres. He has composed a great many operatic pieces, as well as became an excellent vocal performer in them. He travelled over the continent, receiving honours and applause in abundance.

BANCROFT, GEORGE, was born at Worcester, Massachusets, U.S., in 1800. He graduated at Harvard College. He afterwards travelled in Europe, and studied at Gottingen and Berlin. He has published poems and contributed to the 'North American Review;' but the great work which has rendered his name deservedly famous is his 'History of the United States.' In politics he is democratic, was a member of President Polk's government, and from 1846 till 1849 he represented the United States at the court of Britain.

BARAGUEY, D'HILLIERS, marshal of France, was born at Paris on the 6th September, 1795. In 1812 he was nominated a sub-lieutenant, and in 1815 raised to the rank of captain. In 1827 he became a lieutenant-colonel, and in 1830 took part in the expedition to Algeria. His success against the Arabs gained him the confidence of the government of Louis Philippe, and as the reward of his valour he was made a lieutenant-general. On the fall of the citizen king in the revolution of 1848, the provisional government appointed him to the command of the military division of Besançon. He replaced Changarnier in the command of the army of Paris, and concurred in the accomplishment of the *coup d' etat* on the 2d December, 1851. For this service he was nominated a member of the consultare commission. In the war with Russia he was commander-in-chief of the Baltic expedi-

tion, and for his good services was elevated to the dignity of a marshal of France, and received the grand cross of the legion of honour.

BARBES, ARMAND, born at the *Pointe a Petre* (Guadaloupe) in 1810. The instincts of a dreamy and enthusiastic mind made of him from a very early period a child of conspiracy. Throughout almost the entire reign of Louis Philippe he was engaged in intrigues against the government. The revolution of 1848 found him in prison and restored him to liberty. Personal gratitude to Lamartine for having at one period saved him from the scaffold, for a time restrained him from indulging that excess of fanaticism which had through life cursed his existence. He founded a club, which took his name, and in which the doctrines of socialism were mingled with the energy of republicanism. The name of Barbes sounded in the ears of the people like the tocsin against monarchy and the bourgeoisie. In 1849 Barbes was sentenced to transportation, but the punishment was commuted to perpetual detention. He was afterwards pardoned by the emperor, and is now a voluntary exile.

BARNES, ALBERT, a popular biblical commentator, born 1st December, 1798. After passing through the usual preparatory studies he was ordained a pastor of one of the Presbyterian churches of Philadelphia. As a preacher he possesses commanding eloquence; as a biblical expositor his works have been of considerable service to the Sabbath school teachers of Britain and America. Unlike a great proportion of the American clergy, Mr. Barnes has always been a strenuous foe of slavery. His works have had an immense sale not only in America, but in England and Scotland.

BARNUM, PHINEAS TAYLOR, a celebrated American charlatan, was born in the village of Bethel, in Connecticut, in 1810. From a very early period Barnum exhibited an aversion to work of the ordinary kind, which people with less power of face are compelled to follow for their subsistence. After an unsuccessful attempt in the newspaper line, he hit upon the lucky expedient of securing an old negress, whom he represented as the nurse of Washington, and 160 years of age. The story took, thousands in every town and city of America flocked to see the early guardian of their liberator. On this side the Atlantic pathetic pictures were drawn by anti-slavery orators of the degradation thus cast upon the memory of the great general of the republic. The 160 year old negress shelved, Barnum opened a cabinet of curiosities in New York. His next great card was General Tom Thumb. In 1855 Barnum published his life, giving a detailed account of how he managed to deceive the public by his various speculations.

BAROCHE, PIERRE-JULES, French advocate, born at Paris, 8th November, 1802. Devoted to professional and political life. As a member of the chamber of deputies in conjunction with Odilon Barrot he opposed the ministry of Guizot, whose system of government he stigmatized as a system of corruption. In those days the political creed of Baroche was political liberty, gratuitous education, equitable remuneration, *du travail*, protection to agriculture. Subsequently, however, he rather tarnished his reputation by taking part in the repressive measures of Louis Napoleon. On the accomplishment of the *coup d' etat* he accepted the vice-presidency of the '*commision consultative*,' and in 1855 was invested with the grand cross of the legion of honour.

BARROT, ODILON, was born at Villepot, 18th April, 1791; was educated for the law. In politics he has always belonged to the liberal opposition. He contributed much to the bringing about the revolutions of 1830 and 1848. Along with M. Thiers he tried to form a cabinet in 1848. He supported the right of the Count of Paris to the throne. For some time he held office under Louis Napoleon, but ultimately the emperor dispensed with his services.

BARTH, DR., was born at Hamburgh, 18th April, 1821. He was educated in his native town, and afterwards studied at Berlin. In 1845-6-7, he accomplished a journey round the Mediterranean, as well as through the contiguous countries of that famous sea. In 1849 he set out for Africa, in company with Mr. James Richardson, and did not return till 1855. On that vast continent he has travelled at least 12,000 miles. His journeyings were confined to North and Central Africa.

BARTHELEMY, AUG.-MARSEILLE, French poet, born at Marseilles in 1796. The satirical powers of Barthelemy frequently brought him in contact with the government of the restoration, and the revolution of July, 1830, found him in prison. Restored to liberty, he sang the victory of the people, and from Louis Philippe he received a pension of 1,200 francs; which, however, he subsequently lost, from not guiding his muse by the inspiration of the government. The latest effusions of the poet's genius are war songs celebrating the triumphs of the Crimea.

BARTLETT, JOHN R., American ethnologist, born 23d October, 1805, at Providence, Rhode Island. His chief works are, 'A Personal Narrative of Explorations and Incidents in Texas,' and 'The Progress of Ethnology.'

BASTIAT, FREDERIC, a French and political economist, and eminent advocate of the doctrines of free trade. His 'Popular Fallacies concerning General Interests' is one of the most powerful and logical exposures of the protectionist system ever written.

BASTIDE, JULES, French legislator, born at Paris in 1800. Distinguished at college. A career of fortune was open to Bastide had he not chosen to sacrifice fortune to opinion. After the revolution of July, 1830, Bastide, who had been most conspicuous at the barricades, opposed the royalty of the duke of Orleans. The result of this opposition was such as compelled him to seek in England a shelter from the fury of the political passions evoked on the soil of France, the part he had acted being deemed worthy of death. At the revolution of 1848, Bastide, who had returned to France after sojourning in England for a couple of years, was appointed to various important positions by the provisional government.

BECQUEREL, ANTOINE CESAR, an eminent French philosopher, was born on the 7th March, 1788, at Châtillon-sur-Loing in the department of the Loiret. Having studied at the Ecole Polytechnique in 1808, he became an officer of engineers, and served in that capacity with the imperial troops in Spain during the years from

by Captain Beechey. In 1829 he was promoted to the rank of captain. In 1842 he published the narrative of a voyage round the world. In 1843-48 he visited Labuan, rendering Sir J. Brooke most valuable assistance against the pirates that infested the Bornean archipelago. In 1852 Sir Edward commanded the government expedition sent in quest of Sir John Franklin. In addition to several volumes of travels, Sir E. Belcher has published various works of more strictly professional interest of great value.

BELL, JOHN, was born in Norfolk in 1800. Besides being tolerably conversant with literature and history, he is a sculptor who has risen to some degree of eminence. The principal feature in his character as a sculptor is his having attempted to break away from the usual subjects of his craft, and to bring out something new: in this he has so far succeeded.

BELL, ROBERT, litterateur, born at Cork in 1800, author of the 'History of Russia,' in Lardner's Encyclopædia, and editor of Parker's edition of the 'Poets of England,' &c. An erudite and accurate writer.

BENDEMANN, EDWARD, eminent painter, born at Berlin, in 1811. Grandeur of style and accuracy of design are conspicuous in all his works.

BENEDICT, JULIUS, was born at Stuttgardt in 1804. At an early age he showed a great taste for music. When sixteen years of age he became the pupil of the great Weber, and continued such for three years. On account of Weber's recommendation he was engaged to conduct German operas at Vienna, in 1824. He afterwards did the same at San Carlo, in Naples. His own operas, in consequence of their being purely German, never took at Naples. In 1830 he returned to Stuttgardt, where he met with a considerable amount of success. In 1835 he reached London, and since then he has remained in this country. His English operas have been well received.

BERGHAUS, HENRY, celebrated geographer, born at Cleves (Prussia), in May, 1797.

BERLIOZ, HECTOR, an eminent French musical composer, born December, 1803.

BERRYER, P. A., an advocate of great repute. Born at Paris in 1790. Whether under a legitimist *regime*, or the constitutional government of July, 1830, the wild republic of 1848, or the imperial rule of Louis Napoleon, he has maintained ably and firmly, but temperately, his political opinions, and obtained the respect of all governments in succession, although known to be one of the advisers and agents of the Comte de Chambord, the legitimist pretender to the crown of France. Being elected a member of the French Academy in 1855, in his speech on the occasion, he made some severe observations upon the degraded condition of France, which necessarily gave high umbrage to Louis Napoleon, who ordered its suppression, but in a few hours reversed the interdict, and Berryer applying to the emperor to be excused from presenting himself, according to the usual forms, at the Tuileries, pleading his political principles and position as a reason, the request was allowed. Berryer, consistent in his own opinions, has been the intrepid advocate of all the more illustrious victims of government prosecutions in France, from Ney to Montalembert.

BETHELL, SIR RICHARD, was born at Bradford in 1800. He was educated at the Bristol grammar school, and at the age of fourteen entered Wadham College, Oxford, where, at eighteen, he took his degree of B.A. In 1823 he was called to the bar. In 1840 he was made a queen's counsel. In 1851 he was returned to the House of Commons for Aylesbury, and at the formation of the Aberdeen ministry, he was nominated solicitor-general, and knighted.

BINNEY, REV. THOMAS, was born in Newcastle-on-Tyne, and educated for the ministry at Wymondley. He was first placed at Newport, Isle of Wight, from which he removed in 1829 to London. Since then he has always been recognized as one of the leaders of the English independents. He has both travelled and written, but the great source of his fame is the pulpit.

BIOT, JEAN BAPTISTE, was born at Paris in 1774. After a term of study at the college of Louis le Grand, Biot passed into the artillery; but abandoned the military service for scientific pursuits, and won so much distinction as to be appointed professor of mathematics in the central school at Beauvais. Unable to procure the scattered works of the great mathematicians, Biot wrote to Laplace requesting permission to peruse the proofs of his 'Mechanique Celeste.' The request was granted, and henceforth Biot and Laplace were fast friends. In his twenty-sixth year Biot was recalled from Beauvais and appointed to the chair of natural philosophy in the college of France. In 1803 Biot was elected a member of the Academy of Sciences. In 1806 he was chosen a member of the Bureau des Longitudes, and took part in the extension of the French arc of the meridian across Spain and the island of Formentera. The completion of the triangulation in Spain led to a desire to carry it farther north. The English arc begun by General Roy had been carried to the extremity of Scotland by Colonel Mudge. To accomplish this object Biot embarked for England. Colonel Mudge accompanied him to Scotland. The Investigator brig of war was placed at his service. The Investigator sailed north to the little island of Uist, and in this bleak region of fogs and storms his observations were completed. In 1840 the Royal Society awarded Biot their Rumford medal for his researches in connection with the circular polarization of light. Biot married at twenty-two. By his wife, the daughter of Brown, professor of natural philosophy, and contemporary with Reaumur and Nollet, Biot had two children, a son and daughter. The daughter is now a grandmother; his son, distinguished for his knowledge of Chinese, died in 1850. Biot's published contributions to the literature of science are numerous and valuable.

BISCHOFF, THEODORE LOUIS WILLIAM, an eminent anatomist and physiologist; native of Hanover; born October, 1807. He is now professor of anatomy at Munich.

BLACK, ADAM, M.P., was born in Edinburgh, in the year 1784. He was educated at the high school of his native city. When he commenced business he dealt in books of every description—old and new. After a while, his success in business warranted his removing to more extensive premises, on the North Bridge. Mr. Black has always taken

an active part in politics; and during the radical agitation boldly sided with the liberals. He has been twice Lord Provost of, and now represents Edinburgh in parliament.

BLANC, LOUIS, was born at Madrid, in 1813, and is of Corsican extraction. At the age of nineteen he came to Paris, where he wrote for several daily journals. From that period till the revolution of 1848, he continued an untiring writer for the press. His productions tended materially to bring about that event. He was a great advocate for 'organization of labour,' the attempt at which so miserably failed. Near the close of that year, in consequence of the Assembly having given orders that he should be prosecuted for conspiracy, he escaped to England, where he has since remained. He has, since his arrival, been actively employed on a 'History of the French Revolution,' which is to be completed in ten volumes; several of these have been published.

BLANQUI, LOUIS AUGUSTE, born at Paris, 1805. A prominent member of the extreme revolutionary party in France. Condemned to death for conspiring against the government of Louis Philippe,—a sentence subsequently commuted to perpetual imprisonment. Set at liberty by the revolution of 1848, Blanqui, with whom antagonism to authority had become a second nature, organized in Paris that society of the central republicans which so menaced the provisional government, by demanding from it a host of wholly impracticable measures. He is now imprisoned.

BOECKH, AUGUSTE, born 1785, at Carlsruhe, in the grand-duchy of Baden, an eminent philologist. Educated at the university of Halle, in the Prussian province of Saxony, and thence admitted into the teacher's seminary at Berlin. Subsequently he was appointed professor of the Greek language and literature in the university of Berlin, —an office he still holds. Professor Boeckh is an associate member of the Academy of Inscriptions and *Belles Lettres* of France, and a corresponding member of most of the learned societies of Europe. Professor Boeckh's principal philological and critical work is his edition of Pindar, consisting of the Greek text, with various readings, scholia, a Latin translation, a continuous commentary, notes, and a treatise on Greek versification. The work, however, that has mainly contributed to establish his reputation with the students of Greek antiquity, is 'Die Staatshaushaltung der Athener,' translated into English by the late chancellor of the exchequer, Sir George Cornewall Lewis, under the title of 'The Public Economy of Athens.'

BONAPARTE, CHARLES LUCIEN JULES LAURENCE, prince of Canino, eldest son of Lucien Bonaparte, was born at Paris, 24th May, 1803. As a naturalist the prince has acquired great distinction, being regarded as one of the chief living authorities in ornithology. His chief publications are a continuation of 'Wilson's Ornithology of America,' in four folio volumes, and the 'Iconografia della Fauna Italica,' a splendidly illustrated work in three volumes folio. For many years the prince of Canino has been the chief promoter of the annual congress of the savants of Italy.

BONAPARTE, JEROME, the youngest brother of Napoleon I., was born at Ajaccio, on the 15th December, 1784. When Napoleon became first consul, he removed Jerome, then fifteen years of age, from college, and placed him in the naval service. When hostilities broke out between France and England in 1803, Jerome cruised off the West India Islands. Forced to quit that station without doing anything either brilliant or effective, he took refuge in the port of New York. While in the United States he married Miss Elisabeth Paterson, the daughter of a wealthy merchant in Baltimore. The marriage was a misalliance in the estimation of his brother, and Jerome's wife was forbidden to enter France. Under this interdict the daughter of the Baltimore merchant proceeded to England, where she gave birth to a son, Jerome Napoleon Bonaparte. When Napoleon became emperor he caused the marriage to be annulled by a decree of the council of state; the pope, however, refused to ratify the divorce. Making no figure at sea, Napoleon transferred his brother from the naval to the military service, and in 1807 he entered the army with the rank of general. In that same year he married Frederique Catherine, daughter of the king of Wurtemberg. Napoleon now erected Westphalia into a kingdom, and created Jerome its king. Compelled to abandon his kingdom on the abdication of Napoleon, he lived in exile until the return from Elba, when he repaired to Paris, and distinguished himself at Waterloo. After the final abdication of his brother he lived chiefly at Trieste, where he purchased a palace. When Louis Napoleon became ruler of France, Jerome was recalled to Paris, and the old man who had witnessed so many changes of fortune, was created a marshal of France, president of the senate, and in failure of the direct succession, heir to the imperial throne.

BONAPARTE, LOUIS LUCIEN, second son of Lucien Bonaparte, born in Worcestershire, January, 1813, during his father's residence in England. Has written largely on science, and is specially distinguished as a chemist. On the establishment of the empire he was made a member of the senate of France.

BONAPARTE, LOUIS NAPOLEON, third son of Louis, king of Holland—this Louis was third brother of the emperor Napoleon. Louis Napoleon was born at the Tuileries, 20th April, 1808. He spent his youth in Switzerland. His first attempt on France was made at Strasburg, 30th Oct., 1836. This failed. The next was made at Boulogne, 6th Aug., 1840. In both instances he was made prisoner. For the first offence he was banished to the United States, and for the second he was confined in the citadel of Ham. On 25th May, 1846, he made his escape from Ham, and travelling through Belgium, reached England, where he remained till the revolution of 1848. In that year he was elected a representative of the national assembly, and subsequently president of the republic. On 2d Dec., 1851, he accomplished his famous *coup d'état*, and proclaimed himself dictator; and on 2d Dec., 1852, he was proclaimed emperor. He was married on the 29th Jan., 1853, and has since visited her Britannic Majesty twice. In his earlier days he wrote several volumes on what he deemed interesting topics. Since he has succeeded to power he has shown himself, in some respects, a patron of literature; in other respects he has been quite the opposite.

BONAPARTE, NAPOLEON JOSEPH CHARLES PAUL, second and only surviving son of Jerome Bonaparte by his second wife, was born 9th September, 1822. Elected a member of the legislative assembly, prince Napoleon distinguished himself by the support of the ultra opinions, but since his cousin became emperor, he has been a devoted adherent of the imperial policy.

BONHEUR, MADEMOISELLE ROSA, eminent animal painter, born at Bordeaux in 1822.

BOPP, FRANZ, an eminent philologist, born in 1791, at Mayence, in the grand-duchy of Hesse-Darmstadt. In 1812 Bopp removed to Paris, where he continued for about five years; after that he removed to London, to Göttingen, and ultimately to Berlin, where he was appointed professor of Sanscrit and the Oriental languages, a situation which he has ever since continued to fill with the highest reputation. Professor Bopp's investigations have been chiefly directed to comparative grammar,—a science which he has called into existence by the study of Sanscrit. A comparative grammar of the Sanscrit, Zend, Greek, Latin, Lithuanian, Old Sclavish, Gothic, and German languages, is his great work.

BORROW, GEORGE, is a native of Norfolk. His first publication, 'An Account of the Gypsies in Spain,' raised him at once to a high rank as a painter of men and manners. This was followed by 'The Bible in Spain,' being a description of his adventures as an agent of the Bible Society. His 'Lavengro' is understood to be a sort of autobiographical sketch of his own history, and abounds in striking descriptions, scenes, and incidents. Borrow may be considered as the Salvator Rosa of modern literature, his pictures of the wild races of gypsies and vagrants of every character are drawn by the hand of a master, and merely as artistic descriptions possess a rare and peculiar merit.

BOSWORTH, JOSEPH, D.D., LL.D., F.R.S., an eminent Anglo-Saxon scholar, born 1788. Author of numerous philological works.

BOWRING, SIR JOHN, K.B., was born at Exeter in 1792. He was for some time editor of the 'Westminster Review.' He has an extraordinary knowledge of European literature. He received from the university of Groningen, Holland, the degree of LL.D. He was various times commercial commissioner to France; in 1849 was appointed British consul at Hongkong, and in 1853 received the honour of knighthood, and was made governor of Hongkong.

BRAVO-MURILLO, JUAN, ex-president of the Spanish ministry, was born at Frejenal de la Sierra, in the province of Badajoz, June, 1803. Destined for the church, he studied theology at Seville and Salamanca. Abandoning theology he became a student of law, and in 1825 entered the College of Advocates at Seville. His great oratorical powers soon gave him celebrity among the collegians. On the death of Ferdinand VII. he was appointed attorney-general at Caceres in the tribunal of Estremadura. This official position was held by him until the extreme progressionist party came into power in 1835. He now chose Madrid as the scene of his exertions, and with his friend the jurist Pachico, began the publication of the 'Bulletin de Jurisprudence.' When the revolution of 1841 broke out Bravo was arrested as the leader of the Moderados. In 1847 he became minister of justice in the cabinet of the duke of Sotomar, but resigned when Pachico became the head of the government. In 1851 he was charged with the formation of a new cabinet, of which he was himself the head. In the spring of 1853 his cabinet fell.

BREMER, MISS FREDERICA, an eminent Swedish novelist, whom the Howitts have by their admirable translations naturalized in England; born in 1802 at Abo.

BREWSTER, SIR DAVID, LL.D., was born at Jedburgh, in Scotland, in 1781. Originally intended for the Scottish Church, he was admitted a licentiate, and in 1800 obtained the degree of M.A. from the university of Edinburgh. In 1807 he received the degree of LL.D. from the university of Aberdeen, and in 1808 was elected fellow of the Royal Society of Edinburgh. In the latter year he became the editor of the 'Edinburgh Encyclopædia,' which was completed in 1830. The attention of this illustrious philosopher was early directed to the subject of optics, a science which he greatly extended, and in which many of his experiments and discoveries have been of the highest practical value. In 1811, when writing the article 'Burning Instruments' for the 'Edinburgh Encyclopædia,' he threw out the beautiful suggestion, that a powerful lens might be constructed out of zones of glass built up of several circular segments, and which would be well adapted, from its great reflective power, to the illumination of light-houses. In 1813 appeared his 'Treatise on New Philosophical Instruments,' in which his strong practical sagacity and sound science suggested various important improvements. Brewster obtained the Copley medal from the Royal Society in 1815, as a reward for his optical researches, and was adopted into that learned body the same year. The French Institute in 1816 bestowed upon him the half of their prize of 3,000 francs, awarded for two of the most important discoveries in science effected during the two years preceding; and in 1819 the Royal Society gave him the Rumford gold and silver medals for his discoveries on that abstruse physical question, the polarization of light. In 1816 he invented the kaleidoscope, that elegant philosophical toy. Continuing with pertinacious industry his scientific labours, assisted by Professor Jamieson, he commenced the *Edinburgh Philosophical Journal*, and shortly after, the *Edinburgh Journal of Science*. In 1825 the French Institute elected him a corresponding member, and subsequently the same honour was conferred by the Royal Academies of Russia, Prussia, Sweden, and Denmark. To him is owing the suggestion, in 1831, of the scientific meeting at York, from which issued The British Association for the Advancement of Science. In 1832, he received the dignity of knight from William IV. Besides a large amount of contributions to scientific journals, Sir David has published the following works: 'A Treatise on the Kaleidoscope,' 'A Treatise on Optics,' 'Letters on Natural Magic,' 'Life of Sir Isaac Newton,' 'More Worlds than One;' he is also one of the editors of the *London and Edinburgh Philosophical Magazine*. In 1849 he was elected one of the eight foreign associates of the National Institute of France,

order in council, passed in retaliation of Napoleon's Berlin and Milan decrees. In the same year he entered parliament. His triumphant defence of Queen Caroline in 1820 raised him to the highest pitch of popular applause. From 1830 to 1834, Lord Brougham was identified with the fortunes of the whig cabinet, sharing alike in its popularity and disfavour. To the lord chancellor, in conjunction with Earl Grey, was committed the difficult task of carrying against the opposition of the peers the parliamentary reform bill. In the discharge of this duty he exerted all his energy and eloquence. At no crisis in his history did the daring character of the learned lord more completely disclose itself than in those repeated interviews with the king, which the ominous aspect of events necessitated. In 1834 there was a fresh ministerial crisis. The whigs were superseded in office by Sir Robert Peel, and though in a few months the great conservative statesman was compelled to retire, in the reconstructed whig cabinet Lord Brougham had no place. Since that time he has never been a member of any ministry. But though occupying no official position, the noble and learned lord has largely influenced the course of legislation, especially in educational and legal reforms. Perhaps the least worthy of his appearances in parliament were the speeches in which he denounced the anti-corn law league as unconstitutional, even while supporting its policy. On the fall of Louis Philippe in 1848, he expressed a desire to the provisional government to become a citizen of France. In the name of that body Marrast replied, that if he desired to become a French citizen he must cease to be an English peer. In addition to his great political and legal services Lord Brougham has been a voluminous author. A collected edition of his entire works was recently published by the Messrs. Griffin. Lord Brougham married Mrs. Spalding in 1819, and had one daughter, who died. His peerage terminates with his life.

BROWN, Miss Frances, blind poetess, born June, 1816.

BROWNING, Mrs. Elizabeth Barrett, the most distinguished of living poetesses. Born in London of a family in affluent circumstances, she gave early promise of poetic talent, and has from time to time produced works of the highest merit, equally distinguished for their learning and beauty.

BROWNING, Robert, was born at Camberwell, in 1812. He is a poet of genius, but his works have never been of such a character as to make him popular. He has written several pieces for the stage.

BRUNEL, Isambard Kingdom, son of the constructor of the Thames tunnel—eminent engineer, was born at Portsmouth. While yet a child he was taken to France, and received his education at the College of Henri IV., at Caen. Mechanical and railway engineering have been the special objects of Mr. Brunel's study. He designed the first steam-ship built to cross the Atlantic, the 'Great Western,' and the 'Great Eastern,' about which the world has heard so much, is also the product of his genius. In 1838 Mr. Brunel was appointed engineer of the Great Western Railway, and under his superintendence have all the tunnels, bridges, and other works been constructed on that line. Conspicuous as feats of engineering skill is the bridge across the Thames at Maidenhead, the bridge at Chepstow, crossing the Wye, and above all, the bridge just erected over the Tamor of the same span and height as the Britannia bridge, with a central pier rising from a depth of eighty feet of water, the deepest yet encountered in railway engineering. Mr. Brunel was elected a fellow of the Royal Society in 1830, and was chosen one of the council in 1844. He is also a vice-president of the Institution of Civil Engineers, and chevalier of the legion of honour.

BRUNOW, Baron, the celebrated Russian diplomatist, born at Dresden in 1796. Became connected with Russia in 1818. Represented Russia at London, from 1839 till 1854.

BRYANT, William Cullen, was born at Cummington, Massachusets, 3d Nov., 1797. At an early age he decided to make the law his profession. He has written a great deal of poetry, showing a considerable amount of talent. He has also been long connected with one of the leading American newspapers.

BUCCLEUCH and QUEENSBERRY, Walter Francis Montague Douglas Scott, fifth duke of Buccleuch, born 1806. Studied at St. John's College, Cambridge, entered the House of Lords in 1827. In 1855 was nominated colonel of the Edinburgh militia. The duke is a moderate conservative in politics, and takes considerable interest in social improvements and the amelioration of the condition of the Scottish peasant.

BUCHANAN, James, was born 13th April, 1791, in the county of Franklin, Pennsylvania. His father was an Irishman, a native of Donegal. Mr. B. studied law, but had a strong bias for politics. His career has been one of unprecedented success. He has been a member of the House of Representatives, a senator, a secretary of state, an ambassador to foreign courts, and is now president of the republic.

BULWER, Sir Edward Lytton, is son of the late Gen. Bulwer; was born in 1805. He has written a great many novels of various characters —romantic, incidental, sentimental, and historical. He has also distinguished himself in the political world. While still young he was deprived of his father, but his mother—the heiress of the family of Lytton of Knebworth—possessing a taste for elegant literature, imbued the mind of the future poet and novelist with a taste for literature. From the private schools where he received his earliest education, Bulwer went to Cambridge, and completed there his intellectual training in a distinguished manner, having the good fortune to be the successful competitor for the chancellor's prize medal with his English poem on Sculpture. In 1827 he began his career as a novelist by the publication of 'Falkland.' Within a year of the publication of 'Falkland' 'Pelham' appeared, which in its turn was succeeded by the 'Disowned,'—'Devereux,' 'Paul Clifford,' and 'Eugene Aram' followed. Having seen fit or necessary to pause in his career as a novelist, he became the editor of the 'New Monthly Magazine,' to which he contributed a series of papers known as the 'Conversations of the Ambitious Student,' the chief of which have since been pub-

lished in a collected form. In 1833 'England and the English' appeared, a work which excited in a peculiar degree the wrath of the critics. 'The Last Days of Pompeii,' and 'Rienzi, the Last of the Tribunes,' followed. 'Rienzi' gave Bulwer a commanding position as a novelist. 'Ernest Maltravers,' 'The Last of the Barons,' 'Zanoni,' 'Harold, the Last of the Saxon Kings,' 'The Caxtons,' 'My Novel,' and 'What Will He Do With It,' are his other chief works of fiction; 'The Lady of Lyons,' 'Richelieu,' and 'Money,' his most successful plays; the 'New Timon,' and 'King Arthur,' are his most ambitious poems. In 1831 the novelist entered parliament as the member for St. Ives, in the ranks of the 'English Radicals.' In 1835, when Sir Robert Peel took office, he published the 'Crisis,' a powerful pamphlet, which ran rapidly through more than twenty editions, largely influenced the elections, and won for its author a baronetcy. Excluded from parliament at the general election of 1842, for eight or nine years he remained sequestered from political life, but in 1852 he was returned for Hertford. In 1854 the associated societies of the Edinburgh University elected him as honorary president, and in 1857 he was chosen lord rector of Glasgow University, an office to which he has recently been re-elected. On the fall of Lord Palmerston, Sir Edward Bulwer Lytton was appointed colonial minister in the government of Lord Derby, an appointment which he still holds.

BULWER, THE RIGHT HON. SIR HENRY LYTTON, is brother of the novelist, and was born in the same year, 1805. He has appeared as an author, but his career has been strictly political. Since 1829 he has acted as a diplomatist for his government in various countries. In his political career he has been generally consistent and successful.

BUNSEN, THE CHEVALIER DE, was born in 1790, at Korbach, in Germany. He was Prussian ambassador at Rome, Switzerland, and, from 1841 till 1851, at the court of England. Since then he has been living in a private residence on the Rhine, and occupying himself with learned studies. He has written several interesting and useful works.

BUOL-SCHAUNSTEIN, Count, chief minister of Austria, is the son of an Austrian diplomatist. On the death of Schwarzenberg in 1852, he was summoned from London, where he was then ambassador, to receive his present appointment. Count Buol has sought to strengthen the Austrian monarchy by administrative reforms at home, and by directing all his energies to the emancipation of Austria from Russian influence. In 1856, as Austrian plenipotentiary, Count Buol took part in the peace conference of Paris.

BURGOYNE, SIR JOHN FOX, entered the army as one of the corps of royal engineers, August, 1798. Served in Malta, in Egypt, in Sicily, and in Sweden, from 1800 to 1807. Served under Sir John Moore. In 1809 joined the army under Sir Arthur Wellesley, and continued with it, attached to the third division, until the termination of the Peninsular war in 1814. After passing through the various intermediate military grades, he attained the rank of lieutenant-general in 1852, and was then created a knight of the grand cross. In 1854 he was sent to Turkey, and continued in the Crimea as chief of the engineering department of the British army till his recall in 1855.

BURRITT, ELIHU, known as the learned blacksmith, was born in Connecticut, in 1811. He received but an ordinary school education, but by perseverance and industry he has acquired a knowledge of a great many languages and dialects. He is also a proficient in mathematics. Mr. B. has made himself well known in this country and in France, by his untiring exertions to form and consolidate the league of universal brotherhood. He is also a strenuous advocate for the ocean penny postage.

BURTON, JOHN HILL, was born 22d Aug., 1809, at Aberdeen; was educated for the law; but has figured more as a historian and literary writer than as a lawyer.

C

CABALLERO, FERMIN, a Spanish journalist and statesman, born 1800. His parents were peasants, but discerning the superior abilities of their child, exerted themselves to secure for him a superior education. He early manifested a predilection for geographical studies. The first work that drew upon him public attention was a series of criticisms on a geographical dictionary of the Peninsula, a work of imposing pretensions, but got up with so little care in the editing, that it was rendered nearly worthless. The wit and knowledge with which Caballero exposed the shortcomings of Minano's 'Dictionary,' brought him at once fame and wealth. In 1833, Caballero established the *Boletin de Comercio*. Subsequently when that journal was suppressed by authority, he produced the *Eco del Comercio*, a paper which, mainly from the vigour of its original writing, was speedily recognized as one of the most influential journals in Spain. On the accession of Lopez to the ministry, in 1843, Caballero became a member of the cabinet, but was expelled by Espartero. On Espartero's fall he resumed office, though but for a brief period. Caballero's most important works are geographical; his 'Manual Geographica administratino de Espana' is a work of vast and varied research. A small pamphlet on the geographical learning of Cervantes will supply some valuable notes to future commentators on Don Quixote.

CABET, ETIENNE, leader of the French communists or Icariens, was born at Dijon, January 2, 1788. Having received a liberal education, he was admitted a member of the bar. In 1816 he defended General Veux, who, in conjunction with some others, was tried for conspiracy against the restored Bourbons. The ardour with which Cabet defended his client drew upon him the suspicion of authority, and subsequently he quitted Dijon, for that focus of revolution, Paris. On the fall of the elder Bourbons he was appointed procureur-general for Corsica. Displeased with the constitution of July, one of Cabet's first acts on arriving in Corsica was to denounce the new charter. This in an official could not be tolerated, and Cabet was accordingly recalled. On his return he at once threw himself into the ranks of

the opposition, and became conspicuous in the Chamber of Deputies by the violence of his harangues. Having established a newspaper of ultra democratic tendencies, in 1834, he was prosecuted for certain libels on Louis Philippe, and condemned to two years' imprisonment. Escaped to England, he remained there until the amnesty of 1839, when he returned to Paris. It was in 1842 that Cabet first enunciated his peculiar communistic opinions; his 'Voyage en Icarie,' published in that year, attracted great attention among the workmen of Paris. Having procured a grant of a tract of country in Texas, a portion of his followers set out from France to found in the New World a social republic. Subsequently Cabet followed his disciples. In his journey through the United States he heard of the expulsion of the Mormons from Nauvoo, and in May, 1850, Cabet with his followers took possession of the city. The latest accounts of this band of voluntary exiles from the civilization of the Old World, represent them as living harmoniously enough, but steadily decreasing.

CABRERA, DON RAMON, count of Morella, one of the most eminent Carlist generals in Spain, born at Tortora, in Catalonia, in August, 1810. Devoted to the church; through family influence he obtained the reversion of a chaplaincy, but the bishop refused to consecrate him to office, because of the immorality of his life. The death of Ferdinand VII., and the breaking out of the civil war, found Cabrera ready for action. He espoused the cause of Don Carlos, by whom, in 1838, he was promoted to the rank of lieutenant-general, and created count of Morella. On the fall of Don Carlos he was compelled to take refuge in France. Thinking the revolution of 1848 a favourable moment to advance the pretensions of the Carlist party, Count Morella landed in Spain, but being badly wounded at Pasteral, he was obliged again to take refuge in France; from France he passed into London, where he has married a rich English lady.

CAIRD, JAMES, M.P., and eminent agricultural writer, born at Stranraer, in 1816, educated at Edinburgh. At the general election of 1857, Mr. Caird was elected as member of parliament for the borough of Dartmouth. Mr. Caird's contributions to the *Times* newspaper, and his works on high farming, have given him an immense reputation. His presence in the House of Commons is a guarantee for the practical and intelligent discussion of agricultural questions.

CAIRD, REV. JOHN, M.A., a popular preacher of the Church of Scotland, was born in Greenock in 1823. He studied at the university of Glasgow, and in 1844 was licensed to preach the gospel. In the following year he was ordained minister of Newton-on-Ayr, and a few months subsequently was removed to Edinburgh, having been elected by the town council minister of Lady Yester's church in that city. In 1850 he removed from Edinburgh to Errol, and in 1858 he removed from Errol to Glasgow, where a magnificent church has been erected for him. Mr. Caird's pulpit appearances are marked by simplicity, earnestness, and fervour. A discourse preached before the Queen, in the parish church of Crathie, published by request of Her Majesty, has attained an unprecedented popularity, and a volume of his sermons has recently been published by the Messrs. Blackwood, which has already won almost an equal admiration.

CAMBRIDGE, H.R.H. GEORGE WILLIAM FREDERICK CHARLES, duke of, is the son of Adolphus Frederic, first duke, and is a grandson of George III., and cousin to Her Majesty. His royal highness was born at Hanover, March 29, 1819, and on the death of his father in 1850, succeeded to the dukedom. In 1857 he became colonel of the army, in 1845 a major-general, in 1854 a lieutenant-general, and was appointed to command the Highlanders and guards which formed the first division of the army sent to the Crimea to support the interests of Turkey. At Alma and Inkermann his royal highness displayed both ability and valour as a commander. On the retirement of Lord Hardinge the duke was appointed commander-in-chief of the British army.

CAMPBELL, SIR COLIN, lieutenant-general, K.C.B., commander-in-chief of the Indian army, was born at Glasgow. In 1808 he joined the army. Sir Colin served in the expedition to Portugal and Walcheren, and subsequently shared the fortunes of Sir John Moore in the peninsula. At the siege of San Sebastian he led the storming party; in 1815 he shared in the expedition to the United States. In 1842 he commanded the 98th regiment in the expedition to China. In the Punjaub campaign he was a general of brigade. Of his doings at Chillianwallah, Lord Gough, the commander-in-chief, thus wrote:—'Brigadier-general Campbell, with that steady coolness and military precision for which he is so remarkable, carried everything before him.' In 1854, Sir Colin was appointed to the command of the Highland brigade. At the Alma his coolness and intrepidity contributed in a marked manner to the distinguished success of the British arms. At Balaklava he held the post of honour. The 'thin red line' has become a thing of history. So conspicuous had been Sir Colin's services in the Crimea, that when the revolt of the Sepoys broke out he was at once appointed to the command of the army in the East. 'When will you be ready to start?' said Lord Palmerston. 'To-morrow,' said the veteran; 'all I want can be got in Calcutta as well as here.' What Havelock and Outram so gloriously began, Campbell has no less gloriously terminated. These three share the honour of having crushed the Indian mutiny, and avenged our slaughtered countrymen. As a reward for these last services he has been raised to the peerage as Lord Clyde.

CAMPBELL, REV. JOHN, D.D., originally a blacksmith. John Campbell, by the rough energy of his character, won his way to the position of a leader among the English independents; became editor of the 'British Banner,' 'Christian Witness,' 'Christian Penny Magazine,' &c. Dr. Campbell began his career as a minister in Kilmarnock, where he was the first congregational minister. At the period when the 'Christian Witness' was started, he had reached the acmè of his popularity. Since that time the progress of a more liberal theology than is known to distinguish the Doctor, has wrought a considerable change in the feeling with which he is regarded by the body whose representative man he had been for a series of years. In addition to his labours as a journalist,

Lord Morpeth, was born April, 1802. He entered public life as attaché to the embassy at St. Petersburg. Subsequently he was elected one of the members for Yorkshire. The earl has acquired an honourable reputation as a man of letters and general culture, has lectured to mechanics' institutions, has travelled in America and the East. As lord-lieutenant of Ireland under Lord Pamerston's administration he was extremely popular.

CARLYLE, THOMAS, was born in 1795 at Ecclefechan, a small village in Dumfriesshire, where his father held a small farm. Educated at Annan, at the age of fourteen he removed to the university of Edinburgh, where he passed through a rather extended curriculum, distinguishing himself at once in classics and mathematics. Destined for the church, but turned aside from his purpose by circumstances honourable to himself, he devoted himself to literature. His works now amount to nearly a score of volumes, and in them may be found much of the most original and powerful writing of our day. The chief of these are his 'French Revolution,' and the 'Letters and Speeches of Oliver Cromwell.' At present he is engaged upon a 'Life of Frederick the Great,' the first two volumes of which have just been published. No other writer of our time has been so well abused by the critics, yet no other writer has exerted so potent an influence upon contemporary literature.

CARNOT, HIPPOLYTE, minister of public instruction in France under the republic of 1848, was born in 1801.

CARPENTER, WILLIAM BENJAMIN, M.D., one of the most eminent physiologists of the day. He is the son of the late Dr. Lant Carpenter. On leaving school he contemplated entering upon the profession of a civil engineer. His tastes, however, subsequently induced him to determine upon devoting himself to medical science, and in 1833 he entered the medical classes of University College, London, where he greatly distinguished himself as a student. After passing his examination at the Royal College of Surgeons and Apothecaries' Society in 1805, he entered the university of Edinburgh, where he speedily attracted notice at once by the maturity of his knowledge and the originality of his views. Dr. Carpenter graduated at Edinburgh in 1839. Shortly subsequent to this he settled at Bristol, where he was appointed lecturer on medical jurisprudence in the medical school of that city. Here it was that Dr. Carpenter wrote the 'Popular Cyclopædia of Science,' and the 'Principles of Human Physiology.' These works have been the precursors of a host of treatises on cognate topics. For many years Dr. Carpenter edited the *British and Foreign Medico-Chirurgical Review*. He is professor of medical jurisprudence in University College, London, lecturer on general anatomy and physiology, and examiner in physiology and comparative anatomy in the university of London. In 1844 he was admitted a member of the Royal Society. In 1849 Dr. Carpenter gained a prize of 100 guineas, offered for the best essay upon the use and abuse of alcoholic liquors. A people's edition of this work, published by Bohn, has attained great popularity.

CASS, GENERAL LEWIS, a distinguished American statesman of the democratic party, and of notorious pro-slavery predilections, born at Philadelphia, in 1793.

CATTERMOLE, GEORGE, painter, born at Dickleburgh, near Diss, Norfolk, in 1800, is one of the most original of the English school of painters in water-colours. His pictures embrace a comprehensive range of subjects, historical and poetical. Scott and Shakspeare have furnished the artist with ample material on which to exercise his peculiar powers. For more than twenty years Cattermole's works adorned the Water-Colour Exhibition, but during the last five or six years he has ceased to send his pictures there. Knights in armour, brigands in their haunts, and monks in their refectories, are his favourite subjects. His pictures invariably display great imaginative power, deep poetic feeling, delicate conception, and exquisite mastery of colour and tone.

CAUSSIDIERE, MARE, French politician, born at Lyons in 1809. Condemned to imprisonment for his connection with certain revolutionary proceedings in 1834, he was restored to liberty by the amnesty of 1837. His imprisonment appears only to have strengthened the ardour of his convictions, and soon after his release from incarceration he became recognized as one of the leaders of the advanced reform party. At the revolution of February, 1848, Caussidiere was installed prefect of police. Possessing a refined mind under a rough and unpolished exterior, he served his friends less than he made them subservient to his own use. He was a man of action in contact with the people, and surrounded by a militia ready for anything. During the brief reign of the provisional government, his energy contributed to restrain the imprudence of those Polish and Italian refugees with whom Paris swarmed, and who sought eagerly to compromise the republic by involving it in wars of aggression in the interests of foreign factions. Caussidiere in his exile has published a memoir of the revolution which has perhaps not received the attention its importance deserves.

CAVOUR, COUNT CAMILLE, president of the council of ministers, and chief adviser of the king of Sardinia. At once a statesman and an orator, Cavour is the firm friend of representative government. Under his administration Sardinia has taken a more conspicuous place in the European political system than she ever formerly occupied.

CAYLEY, ARTHUR, distinguished mathematician, born on 16th August, 1821, at Richmond, Surrey. Studied at Trinity College, Cambridge, where he took his B.A. degree, and was senior wrangler and first Smith's prizeman in 1842. In the same year he was elected a fellow of the college. Afterwards he studied for the law, and was called to the bar in 1849. Mr. Cayley has devoted himself to researches in the higher branches of pure mathematics. The *Philosophical Transactions* of the Royal Society contain many important contributions from his pen upon his favourite science.

CHADWICK, EDWIN, C.B., a distinguished social economist, born in 1802. The public life of this well abused man may be said to have commenced with his connection with those great measures of poor law amendment and sanitary reform, with which his name is now associated. In the prosecution of these measures he exhibited

great ability and devotion—not unmixed with a certain contempt for those who differed from his views, that might have been spared. The animosity which this temper kindled, compelled his retirement from official life.

CHAMBERS, WILLIAM and ROBERT, popular publishers, and originators of 'Chambers's Journal,' were born in Peebles, William in 1800, Robert in 1802. Both brothers received a good education in their native town, Robert passing through a complete classical course. Through the misfortunes of their father they were thrown, while yet in boyhood, on their own resources. The early struggles of the youths form a remarkable example of self-reliance, energy, and industry. The family having removed from Peebles to Edinburgh, William and Robert conducted separate establishments until 1832, when they united in establishing their well known *Journal*. Since that time their course has been steadily upwards. Until now their printing and publishing house in High street is one of the most remarkable and extensive in Scotland. Among the more important works they have published, are their 'Information for the People,' the 'Popular Library,' 'Instructive and Entertaining Library,' 'Repository of Instructive and Entertaining Tracts,' 'Miscellany,' 'Educational Series.' Mr. Robert Chambers has devoted great attention to literature and science. His chief works are the 'Traditions of Edinburgh,' 'History of the Rebellion of 1745-46,' 'Popular Rhymes of Scotland,' 'Life and Works of Burns,' by far the best life of Burns yet published, the 'Domestic Annals of Scotland.' His 'Ancient Sea Margins' is an important contribution to geological science. 'The Book of Scotland,' and 'Things as they are in America,' are Mr. William Chambers' chief works.

CHANGARNIER, NICOLAS AIME THEODULE, is one of the most celebrated of the African generals. In Algeria, he rose from the lowest position in the French army, to his present rank. His political power dates from the revolution of 1848. The provisional government then constituted him governor-general of Algiers. In Paris, during the insurrection of June, 1848, he took part in the suppression of the civil war, which led to the dictatorship of Cavaignac. On the election of Louis Napoleon as president of the republic, Changarnier was appointed commander of the first military division. Without bloodshed he suppressed the attempted insurrection of June, 1849. Napoleon's purpose served, he became jealous of the military talents of Changarnier, and the general was accordingly superseded in the command of the army of Paris. Since the *coup d'état*, Changarnier has been an exile; lately permission to return to France was given him, in common with the other exiled generals, but was spontaneously rejected.

CHEEVER, GEORGE BURRITT, D.D., a popular American theological writer, born in 1807, at Hallowell, Maine.

CHERNEY, COLONEL FRANCIS RAWDON, royal artillery pioneer of the overland route to India, one of the most intelligent and energetic of modern travellers, is a native of Ballyrea, in Ireland, born 1789.

CHILD, MRS., an eminent American educational writer, author of the 'Mother's Book,' 'Frugal Housewife,' &c.

CHISHOLM, MRS. CAROLINE, eminent for her efforts to improve the condition of emigrants, born at Wotton about the year 1810.

CLARE, JOHN, the peasant poet of Northamptonshire, born at Helpstone, in 1793.

CLARENDON, GEORGE WILLIAM FREDERICK VILLIERS, earl of, secretary of state for foreign affairs under Lord Palmerston's administration, born Jan. 26, 1800. His first prominent public appointment was that of plenipotentiary to Madrid. In this position he was fortunate enough to secure at once the confidence of the government he represented, and also the good opinion of the inhabitants of the Spanish metropolis. On his accession to the earldom in 1838, he returned to England. Not long after he had taken his seat in the House of Lords, a speech he delivered on Spanish affairs attracted general attention, and on the re-arrangement of the Melbourne cabinet in 1840, Lord Clarendon was appointed lord privy seal. Sir Robert Peel coming into power in 1841, Lord Clarendon returned to the opposition. In 1846, however, he became president of the Board of Trade under Lord John Russell. In the subsequent year he was nominated lord-lieutenant of Ireland. When he entered upon his vice-regal duties, famine and fever had induced great national distress and suffering, and the death of O'Connell then just announced in Dublin, was creating considerable excitement. The Repeal Association was daily growing more noisy and troublesome, 1848 was already casting its deep shadows over the path of the politician. The energy and prudence with which Lord Clarendon conducted himself during the crisis added much to his reputation for sagacity. Lord Clarendon held the vice-regal office until the resignation of the Russell ministry in 1852. On the formation of the Aberdeen cabinet, Lord Clarendon was appointed to the foreign office, a position which he likewise held under the government of Lord Palmerston. The noble earl has thus occupied a conspicuous political position in all the leading events of late years. Lord Clarendon married in 1839 a sister of the present earl of Verulam, by whom he has a youthful family. He was created a G.C.B. in 1838, and in 1849 received the knighthood of the Garter.

CLARK, MRS. MARY COWDEN, author of the 'Complete Concordance to Shakspere,' born June, 1809.

CLOSE, THE REV. FRANCIS, M.A., dean of Carlisle, an eminent preacher of the evangelical school.

COBDEN, RICHARD, born at Midhurst, Sussex, in 1804. Leaving home at an early age, he entered a London house, where he speedily gained the esteem of his employers. While there, combining business with intellectual advancement, he visited the United States and the greater part of Europe. Beginning business on his own account, he early gained a reputation for the production of elegantly designed printed goods. In a pamphlet entitled 'England, Ireland, and America,' and a pamphlet on Russia, he first embodied those views with which his name is now identified. Returned to parliament for Stockport, in 1841, he soon gained the ear of that most factitious of all assemblies, the House of Commons, by the admirable arrangement, direct-

ness, and force of his speeches. Throughout the anti-corn law struggle, Cobden was recognized as the leader of the enemies of the bread tax; and when Sir Robert Peel abolished obnoxious import, he pointed to Mr. Cobden as the man with whose name the honour of its abolition must be associated. At the general election in 1857, Cobden's peace principles lost him a seat in parliament. Since then he has been repeatedly solicited to offer himself as a candidate, but domestic affliction has unhappily deprived the country of his services.

CODRINGTON, Sir William John, K.C.B., was born in 1800. He is the eldest surviving son of Admiral Sir Edward Codrington. In 1821 he entered the army; and in 1836 became lieutenant-colonel in the Coldstream guards. In 1846 he attained the rank of colonel, and in 1854 that of major-general. When the British army went out to Turkey, Sir William accompanied it as a spectator. Being at Varna immediately before the sailing of the expedition to the Crimea, Lord Raglan appointed him to the command of the first brigade of the light division, vacant by the appointment of General Airey to the adjutant-generalship of the army of the East. Sir William led this brigade with great steadiness and gallantry at the battle of the Alma. On the morning of the battle of Inkerman, when visiting the outlying pickets, about five o'clock, he discovered the gray columns of the Russians advancing, rode back to his brigade and instantly gave the alarm. His bravery on that dreadful day was noted by the commander-in-chief, and when Sir George Brown retired wounded to Malta, General Codrington was appointed to the command of the light division. On the death of Lord Raglan, and the resignation of General Simpson, he was appointed commander-in-chief of the British army in the Crimea. For his services there he has since been made a knight commander of the bath.

COLERIDGE, Rev. Derwent, principal of St. Mark's College, Chelsea, son of Samuel Taylor Coleridge, was born at Keswick, September, 1800. Educated at a private school at Ambleside, and subsequently at St. John's College, Cambridge. His earliest contributions to literature were made to 'Knight's Quarterly Magazine,' under the signature of Davenant Cecil. But he is best known to the reading world by his admirable memoir of his brother Hartley, whose 'Poems' and 'Biographies of Northern Worthies' he edited. Since the death of his sister Sarah, Rev. Derwent Coleridge has taken her place as editor of his father's works.

COLLIER, John Payne, eminent philologist and editor of Shakspeare, born in London, 1789.

COLLINS, Wilkie, R.A., son of the great painter, a distinguished biographer and novelist, born in London in 1824.

COMBERMERE, Stapleton Cotton, first Viscount, is the eldest son of the late Sir R. S. Cotton, M.P. for Cheshire, born 1770, entered the army in 1791, and served in the campaign in Flanders, in 1793-94. Two years later he embarked for the Cape of Good Hope, under Sir Thomas Craig, in command of the 25th light dragoons, and accompanying his regiment to India, went through the campaign of 1798-99, against Tippoo Sultan, taking part in the siege of Seringapatam. In 1808 he accompanied Lord Wellington to the Peninsula, in command of a cavalry brigade, where he specially distinguished himself. In the year following the battle of Talevera he was promoted to the rank of lieutenant-general, and in 1810 was appointed to the command of the allied forces under the duke of Wellington. In this position he continued until 1814. In 1817 he was appointed governor of Barbadoes. In 1822 he assumed the chief command of the British forces in India. On the death of the duke of Wellington he was appointed constable of the tower of London. In 1855 he was created a field marshal.

CONSTANTINE, Nicholaevich, second son of the late Emperor Nicholas, grand duke of Russia, and grand admiral of the imperial fleet, born 1827, and was declared admiral of the fleet by his father in 1831, when he was four years old. His chief naval instructor was Admiral Litke, celebrated by his voyage from Cronstadt to Kamtschatka and back in 1826-27. Constantine in his boyish studies displayed a marked predilection for everything Russian. His general reputation for talent earned him a wide popularity in Russia, more especially with the old Russian party. In 1847 he visited England, and went to all the public establishments, leaving a favourable impression upon all with whom he came in contact. Constantine married the Princess Alexandria of Saxe Altenburg. In the late war he was intrusted with the control of the defensive operations in the Baltic. The high expectations entertained respecting his spirit and ability were scarcely realized during a contest in which he gave such conspicuous proof that discretion was the better part of *his* valour.

COOK, Eliza, one of the most pleasing song-writers of the day, born in London in 1817.

COOPER, Thomas Sidney, A.R.A., a distinguished painter, born Sept. 26, 1803. His parents were in humble circumstances, and his father having, while Thomas was a child, deserted his family, the boy was early thrown on his own resources. Having taught himself to draw, he succeeded in occasionally earning a few shillings by the sale of sketches of some old buildings. Subsequently he got employment as a scene painter at the theatre, and in 1827 he went to Holland. In Holland he practised portrait painting, and studied the works of the old Flemish and Dutch masters. Mr. Cooper also mastered the methods of the living painters of Holland, especially the method of the eminent animal painter, M. Verboeckhoven. In 1831 he returned to England—resolved to adopt animal painting as his particular department of art. The novelty of his manner at once caught attention, and attracted purchasers. His first picture exhibited at the gallery of the Society of British Artists, procured him a commission from Mr. Vernon, and since that time his career has been one of unbroken prosperity.

COPE, Charles West, R.A., distinguished at once as a historic and domestic painter, born at Leeds in 1815.

CORMENIN, Louis Marie De La Haie, Vicomte De, eminent French political writer, born at Paris, Jan. 6, 1788. The son and grandson of officers of high rank. M. de Cormenin received a careful training for public life. At the early age of twenty-two he was appointed by Napoleon first secretary of the council of state,

and while in that office was charged with drawing up some of its most elaborate reports. In 1828, Cormenin was elected deputy, and continued to be re-elected during some twenty years. His intimate and comprehensive knowledge of jurisprudence, his logical method, whether of speaking or writing, gave him great power. Louis Philippe had not long been seated on the throne of France ere Cormenin became bitterly hostile to the rule of the 'citizen king.' After the revolution of 1848, he diligently set himself to remodelling the constitution, being president of the commission named for that purpose. After the *coup d'état*, M. de Cormenin was appointed a member of the council of state reconstructed by Napoleon III.

COUSIN, VICTOR, the eminent eclectic philosopher, born at Paris in 1791. A translation of 'Plato' into French, published in 1812, first gave Cousin celebrity in the literary and philosophical world. In 1815 he was appointed by Royer Collard to deliver lectures on the history of philosophy in the 'Faculté des Lettres' of the university. On the fall of Napoleon, the misgovernment of the Bourbons excited his disgust, and from the professorial chair he was not seldom heard denouncing the doomed race which had 'learned nothing, and forgotten nothing.' The freedom with which he uttered his opinions on the restored monarchy, drew upon Cousin the attention of the government, which, in 1820, issued peremptory orders that he should discontinue his lectures. Thus set at leisure, he turned with renewed energy to philosophical studies. Travelling in Germany in 1834, his freedom of speech made him an object of distrust to the government of Prussia, and he was arrested accordingly; but after a brief imprisonment he was allowed to depart to Paris. In 1828 he resumed his lectures. When Guizot became a minister, Cousin was appointed inspector-general of education. In this capacity he visited Germany in 1831, and in 1832 that celebrated report on the Prussian system of education was published, which has given popular instruction such an impulse over Europe. Cousin has been the enthusiastic disciple of nearly every system of philosophy, and justifies this general devotion by professing an impartial and universal eclecticism. Sir William Hamilton's celebrated paper on the 'Philosophy of the Unconditioned' was mainly directed against the principles of Cousin, and is accepted by many of the profoundest and most cautious thinkers, as an effectual demolition of the theories of the brilliant Frenchman.

COUTTS, MISS ANGELIA GEORGIANA BURDETT, born 1814, granddaughter of the eminent banker of the name, to whose great wealth she has succeeded.

CRAIK, GEORGE LILLIE, a literary writer, and editor of the 'Pictorial History of England,' born in Fife in 1799. At the university of St. Andrews he went through the usual course of a divinity student, but did not take license as a preacher. Soon after the Society for the Diffusion of Useful Knowledge was formed. Mr. Craik wrote for it 'The Pursuit of Knowledge Under Difficulties,' and though appearing without a name, this work established its author's reputation as a writer of extensive and varied acquirements. Since then, Mr. Craik has largely contributed to our popular literature. Scrupulous accuracy, and sound criticism, are the leading characteristics of his writings. He is now engaged on a 'History of the English Language and Literature.'

CRANWORTH, ROBERT MONSEY ROLFE, Baron, late lord chancellor of England, born 1790.

CREASY, EDWARD SHEPHARD, M.A., professor of history in the university of London, born at Bexley, Kent, in 1812, educated at Eton, and St. John's College, Cambridge. In 1837 he was called to the bar by the benchers of Lincoln's Inn. In 1850 he was appointed professor of modern and ancient history in the university of London. His chief and most popular work is 'Fifteen Decisive Battles of the World,' published in 1851, of which at least a half dozen editions have been already called for.

CRÉMIEUX, A., a French legislator, and ex-minister of justice under the provisional government of France, in 1848. Cremieux was long a member of the Chamber of Deputies, always voting with the reform party against Guizot. When it was announced that the government would put down the reform banquets, Cremieux exclaimed, 'There is blood in this!' Encountering Louis Philippe and his queen in the Place de la Concorde, on the Thursday of their flight, he urged the king to depart immediately, no hope for them being left. Afterwards he proceeded to the Chamber of Deputies, and advocated the formation of a provisional government.

CRESWICK, THOMAS, R.A., painter, born at Sheffield, Yorkshire, 1811, one of the most general favourites among living English landscape painters. The first pictures by which Mr. Creswick became known, were his Welch streams; their exquisite combinations of rock, foliage, and river, excited universal admiration. In 1842 Mr. Creswick was elected an associate of the Royal Academy. If we are not mistaken, Mr. Creswick was the first, or at least among the first, of oil painters to introduce the now common practice of painting in the open air, direct from nature.

CROLY, REV. GEORGE, LL.D., poet, litterateur, and theologian, born in Dublin, 1785, and was educated at Trinity College. Dr. Croly was one of the earliest contributors to 'Blackwood;' as rector of St. Stephen's, Wallbrook, he is much esteemed. He has written songs and sermons, novels and newspapers, and all of them well. His 'Tales of the Great St. Bernard,' 'Salathiel,' and 'Marston,' are among the best works of fiction of our time. Dr. Croly is an eminent scholar, and in early life was an admirable musician.

CRUIKSHANK, GEORGE, artist, born 1794. His father was an artist of considerable ability. Desirous of going to sea, his first practice was without any intention of devoting himself to professional life. But his father's death leaving his mother and a sister under his care, he entered the Royal Academy as a student. The academy was crowded at the time. Fuseli told him he must fight for a place, but being somewhat short-sighted, and the illustrative figures so indifferently placed, that little good could be got from them, George made but one drawing during his attendance of the course. To enumerate all the works he has since them illustrated would be almost impossible. He is justly entitled to be considered the

originator of the now prevalent style of illustration. A great critic has pronounced him the prince of living caricaturists, and one of the best of men.

CUMMING, Rev. John, D.D., minister of the Scotch Church, Covent Garden, London, and author of numerous devotional and controversial works, born in Aberdeenshire, Nov., 1810. Since 1833, Dr. Cumming has been a highly popular preacher in the metropolis.

CUNNINGHAM, Peter, author of the 'Handbook of London,' and editor of Murray's edition of the 'Works of Goldsmith,' and 'Johnson's Lives of the Poets,' &c., born at Pimlico, London, April, 1816.

CUNNINGHAM, William, principal of the New College, Edinburgh, born at Dunse, Berwickshire, October, 1805. Educated at the university of Edinburgh, where he greatly distinguished himself as a student. Almost immediately after receiving license to preach, he was ordained assistant and successor to the Rev. Dr. Scott of Greenock. He was afterwards translated to Trinity College Church, Edinburgh. Dr. Cunningham took a prominent part in all the discussions and controversies which preceded the disruption of the Scottish Church; and, on the death of Dr. Chalmers in 1847, was appointed his successor, as principal of New College.

CURTIS Benj., an eminent American lawyer, b. in 1809, author of numerous standard legal works.

CUSHMAN, Miss Charlotte, an eminent American tragic actress.

D

DALE, the Rev. Thomas, M.A., canon of St. Paul's Cathedral, and vicar of St. Pancras, poet and popular author, born at Pentonville, London, August, 1797.

DALHOUSIE, James Andrew Brown Ramsay, marquis of, is the tenth earl of Dalhousie, born 1812; was governor-general of India during the last Sikh war; to his policy Britain owes the annexation of the Punjaub. The marquis returned from his duties in the East in shattered health. Lord Panmure is the heir of his Scottish titles.

DANA, James D., a distinguished American naturalist, born at Utica in 1813; author of several standard works on mineralogy, &c.

DANA, Richard Henry, poet and novelist, is the son of Francis Dana, minister to Russia, member of congress, and chief justice of the commonwealth of Massachusetts; born November, 1787.

DANBY, Francis, A.R.A., a distinguished painter of what is styled the historical landscape, born near Wexford, Ireland, 1793. He received his earliest lessons in design in the School of Arts, Dublin, and exhibited his first pictures in 1812, at the exhibition in that city. It was not, however, until 1824 that Danby attracted much attention as an artist. In that year his 'Sunset at Sea after a Storm,' purchased by Sir Thomas Lawrence, at a price much above what the modest artist had presumed to place upon it, proclaimed his powers. Next year he exhibited 'The Delivery of Israel out of Egypt.' In consideration of the great ability displayed in this picture, the Royal Academy elected him an associate. Mr. Danby's landscapes blend great imaginative power with great poetic refinement. In his own peculiar path, Mr. Danby has long stood without a rival.

DARGAN, William, capitalist and contractor, the architect of his own fortune, and projector of the Dublin exhibition.

D'AUBIGNE, Rev. J. H. Merle, the historian of the reformation, born at Geneva, Switzerland, 1794, and professor of church history in that city.

DAVID, Felicien, eminent musical composer, was born at Casenet, in the department of Vaucluse, on the 8th of March, 1810. A peculiarity of the compositions of David is the attempt to suggest by music, operations of nature, which are obvious only to the eye.

DAWSON, George, popular lecturer and preacher in 'The Church of the Saviour,' Birmingham, born 1821, educated at Glasgow university.

DELACROIX, Ferdinand-Victor-Eugene, eminent French painter, was born at Charenton, Saint Maurice, near Paris, about the beginning of the present century. His principal pictures are 'The Massacre of Scio,' 'Dante and Virgil in the Inferno,' 'Algerian Women,' 'The Jewish Wedding.' Delacroix, though not likely to take rank in the high position his admirers claim for him, undoubtedly possesses superior power as an artist, and his influence upon contemporary French art has unquestionably been great.

DELANE, John T., acting editor of the *Times* newspaper, was educated at Magdalen Hall, Oxford, where he took his degree. Under Mr. Delane's management the *Times* has attained its present high position.

DEMIDOV, or DEMIDOFF, Anatol, a Russian author of eminence, is the most conspicuous member of a family of capitalists—the Rothschilds of Russia. The founder of the house of Demidov was a serf, who, in the days of Peter the Great, left his native village to escape serving in the army of the Czar. Niteita bound himself to a blacksmith at Tula, receiving for his work at the rate of about three halfpence a-week. Before the close of his career, on the birth of the prince Peter, he made the empress a present of a hundred thousand roubles. Niteita was a special favourite of Peter the Great, and under his auspices he established the first iron foundry in Siberia. The gold and silver mines of the Ural mountains were discovered by his son and grandson. Prudently enough, however, they concealed this discovery, until they had ascertained the government would allow the proprietors of the land to work it to their own profit. In 1840, Anatol Demidoff was married at Florence to the Princess Matilda de Montfort, daughter of Prince Jerome Bonaparte and of Princess Catherine of Wurtemberg. The marriage produced no children, and after five years it was dissolved by mutual consent—the Princess Matilda receiving an allowance of 200,000 roubles a-year. Demidov resides chiefly in Italy.

DEMORGAN, Augustus, a distinguished mathematician, born in 1806 at Modma, on the coast of Java, now professor of mathematics in the university of London.

DE QUINCEY, Thomas, author of a series of the most original contributions to the magazine

did it appear that the real editorial faculty was to be found. Political disquisition was not the forte of the novelist, and the connection with the *Daily News* was abandoned. 'Dealings with the Firm of Dombey & Son' was now commenced, followed by 'The History of David Copperfield,' 'Hard Times,' 'Bleak House,' and 'Little Dorrit.' In 1850 Mr. Dickens started 'Household Words,' a weekly periodical, which has been enriched by the contributions of some of the ablest and most popular writers of the day. The time has not yet come for an impartial estimate of the genius of this unquestionably most successful novelist of our own, or of any age. Wherever the English language is known, Dickens is read, and not a few of his works have been translated into the varied languages of Europe.

DINDORF, WILHELM, was born at Leipzic, in 1802, is an eminent classical scholar; has edited the leading classics for the university of Oxford.

DISRAELI, THE RIGHT HON. BENJAMIN, novelist, biographer, statesman, and chancellor of the exchequer, born in London somewhere about the year 1805. His first literary efforts were made in 1826, when he contributed a series of articles to a daily metropolitan newspaper, the *Representative*. The paper did not exist more than five months, but the experiment was sufficient to confirm young Disraeli's ambition to combine political with literary distinction. In 1828 he published 'Vivian Grey;' the work made a great sensation. During the three years subsequent to the appearance of this novel, Mr. Disraeli travelled on the continent, and in the East, gathering those impressions of Oriental life which have been reproduced in his works. Returning from travel at the moment the reform bill agitation had introduced a new era in British politics, he made various attempts to get into parliament. Recommended by Mr. Hume and Mr. O'Connell, he stood for Wycombe in Bucks, but was defeated. In 1833 he became a candidate for Marylebone. In his address to the electors he described himself as a man who had already fought the battle of the people. Again, however, he was unsuccessful. So resigning for the present all hopes of parliamentary honours, he resumed his literary occupations. After devoting himself for about two years to purely literary avocations, during which he published the 'Wondrous Tale of Alroy,' 'The Rise of Iskander,' 'The Revolutionary Epic,' 'The Crisis Examined,' and 'A Vindication of the British Constitution,' in 1835 he stood for the borough of Taunton, resolved to try his fortune in the conservative interest. O'Connell, no longer his patron, was now the object of his attack. The agitator replied to the sarcasms of the novelist in a strain of the coarsest vituperation. The quarrel led to a hostile correspondence between Mr. Disraeli and Mr. O'Connell's son. Mr. Disraeli's success at Taunton was no better than it had been in Wycombe and Marylebone. But in a letter written to the elder O'Connell after the election, he thus alludes to his repeated failures:—'I have a deep conviction that the hour is at hand when I shall be more successful. I expect to be a representative of the people before the repeal of the Union. We shall meet again at Phillippi.' Mr. Disraeli once more returned to his literary labours. 'Henrietta Temple' was published in 1836, and 'Venitia' in 1837. His political ambition was now at length about to be gratified with a seat in the House of Commons. At the age of thirty-two he was returned as conservative member for Maidstone. Unfortunately, however, the list of his failures was not yet closed. His maiden speech was accompanied throughout by the laughter of the House, and at last he was compelled to resume his seat, uttering these words—'I have begun many things several times, and have often succeeded at last, I shall sit down now, but the time will come when you will hear me.' Within two years from this prediction of future success, arising from present failure, he had begun to obtain the ear of the House, and within two years more, he was recognized as the leader of the 'Young England Party.' During the Peel ministry of 1841-46, he acquired his highest distinction as a master of sarcasm. During all the period Sir Robert Peel was developing his free trade policy, Disraeli's attacks on him were incessant, and truculent in the extreme. His brilliant invective did no good to his party, but it secured for him personal distinction and parliamentary position. On the fall of Peel he was now the most conspicuous man in the protectionist ranks, and on the retirement of the Russell cabinet in 1852, Mr. Disraeli became chancellor of the exchequer, under Lord Derby. On the break up of the Palmerston cabinet, by the ill-fated conspiracy bill, he again resumed his position of leader of the Commons, under the noble earl. In 1839, Mr. Disraeli married Mrs. Wyndham Lewis, the widow of his parliamentary colleague, at Maidstone, and through her he became possessed of the wealth necessary to his complete political success. Since Mr. Disraeli commenced his parliamentary career, he has published 'Alarcos, a Tragedy,' 'Coningsby, or the New Generation,' 'Sybil, or the Two Nations,' 'Tancred, or the New Crusade,' and a political biography of Lord George Bentinck.

DIXON, WILLIAM HEPWORTH, of the Inner Temple, editor of the *Athenæum*, born 1821, is the author of the Lives of Howard, Penn, and Blake.

DOO, GEORGE THOMAS, eminent line engraver, was born in January, 1800, in the parish of Christ Church, Surrey. The works by which this distinguished artist is best known are his 'Knox Preaching Before the Lords of the Covenant,' after Wilkie; his admirable rendering of Etty's 'Combat,' and his elaborate version of Eastlake's picture of the 'Italian Pilgrims Coming in Sight of Rome.' Raffaelle's 'Messiah,' and his 'Infant Christ Bearing the Cross,' and the 'Ecce Homo' of Correggio are also works possessing a rare order of merit. The very limited patronage which line engraving has of late years received, has almost led Mr. Doo to abandon the profession, and for some time past he has painted in oil a number of highly characteristic portraits. Mr. Doo enjoys the professional distinction of historical engraver to the queen. His engraving of Her Majesty, after Patridge, is esteemed the best portrait of our sovereign lady yet published.

DORAN, JOHN, LL.D., born in London in 1817; author of several popular historical works.

DROUYN DE LHUYS, EDWARD, a French statesman and diplomatist, was born at Paris, on

the 19th November, 1805. Having received an admirable education, at an early age he entered upon political life. In 1831 he became attaché to the French ambassador at Madrid, the Count de Ragneral, whose confidence he soon completely won. In 1833 he went to the Hague, as charge d'affaires, and had there the chief share in conducting the diplomatic transactions arising out of the dissolution of the union between Belgium and Holland. The mode in which the diplomatist conducted himself in this critical juncture was highly gratifying to all concerned. Prince Tallyrand, who had watched the progress of the conference, pointed him out to the French government as of the greatest promise. In 1842, M. Drouyn De Lhuys was elected a member of the Chamber of Deputies. Even so early as 1842, this astute statesman saw symptoms of the coming disaster, which was to prostrate constitutional government in France, and remonstrated with Guizot upon the policy of the government. On the accession of Louis Napoleon, M. Drouyn De Lhuys was appointed minister of foreign affairs in the first government formed by him. In 1850 he was sent as ambassador to England. In 1855 he represented France in the conferences at Vienna, but the views he held being esteemed too favourable to Austria, he was superseded by Count Walewski. Subsequently he was appointed one of the vice-presidents of the senate.

DUDEVANT, MADAME AMANTINE AUSORE, better known in England by her assumed name of George Sand, was born in 1804, in the department of Indre, France. Her father served in the wars of the revolution, and was a captain in the army of the empire. His paternal ancestor was a premier general, but his mother was a granddaughter of Augustus II. of Poland. Left an orphan by the death of her father, who was killed by a fall from his horse, Mademoiselle Dupin was educated by her grandmother, the Comtesse de Horn. The comtesse was a believer in the doctrines of Rousseau, and educated young Ausore accordingly. When the girl had reached the age of fifteen, her grandmother was prevailed upon to send her to Paris. In Paris she was placed in the convent des Dames Anglaises. With all the enthusiasm of her nature she entered into the spirit of the place, and became for a time an ardent catholic. Her devoteeism went so far that, on her grandmother's death, she resolved to take the veil. The family authority was interposed to prevent this result, and at the age of seventeen she was married to M. Dudevant, a country gentleman of her native district. The marriage was not a harmonious one, and in 1831 a separation was effected, M. Dudevant being allowed to retain her fortune. At the age of twenty-seven she came to Paris. In an obscure lodging in the Quai St. Michel, she became acquainted with Jules Sandeau, a young student. To earn a living, the friends so associated betook themselves to literature. 'Rose et Blanche,' a novel, published in 1832, was the joint product of their labours. Business requiring Madame Dudevant's return to her native place, 'Indiana' was produced by herself alone, and to it, in commemoration of her friendship with the Parisian student, she affixed the name George Sand. This work at once gave her a celebrity which her subsequent writings have contributed to increase. Madame Dudevant's prolonged familiarity with the leading thinkers among the philosophical democrats, and her own ardent genius prepared her to hail, with the impassioned rapture of her nature, the triumph of democracy in 1848. For some time she edited a democratic journal in Paris. Lamartine, not quite assured respecting the course she might deem it her duty to follow, had an interview with her during his 'three months of power,' and did his best to tame her fiery spirit. He thought he had succeeded, but the deeper sympathies of her nature drew Madame Dudevant to the profession of a more unbridled democracy than Lamartine desired should become dominant. With the advent of Napoleon, the functions of Madame Dudevant as a journalist ceased, and since the proclamation of the empire she has turned from politics to literature. Her autobiography appeared some time ago. Several volumes of the work are filled with a narrative of the early life and military adventures of her father, Maurice Dupin. To justify this elaborate introduction, George Sand asserts that every isolated life is a mystery; that thoughts, beliefs, instincts, are all an enigma unless we can trace their origin in the past.

DUFAURE, M., an ex-minister of France, was born in 1789, educated for the bar. After practising his profession at Bordeaux, Guizot made him a councillor of state, and subsequently minister of public works. After the revolution of February he became a constitutional minister under Louis Napoleon. When the president of the republic resolved to usurp the supreme power, Dufaure having always supported the cause of liberty, opposed the *coup d'état*, against which he protested, in common with all the eminent statesmen of France.

DUFF, ALEXANDER, D.D., eminent Indian missionary, born at Pitlochry, Perthshire, in 1808.

DUMAS, ALEXANDRE, was born at Villers Cotterets, in the department of the Aisne, July 24, 1802. His father, a general of some distinction in the armies of the republic, died in 1806. Young Dumas received his education in his native town from Abbé Grégaine. At the age of fifteen he became a copying clerk. In 1820, Adolphe de Leuven, a young gentleman from Paris, who had begun to write for the theatre, proposed to him that they should unite their efforts. To write for the theatre, said Leuven, was a trade like any other, and only required practice. Thus commenced that career of romance and play-writing which has given Dumas so great a notoriety. His novels are legion, but the most popular are the 'Count de Monte Christo,' and 'Les Trois Mousquetaires.' In 1853 Dumas began to publish his 'Memoirs,' which now amount to some thirty volumes. The catalogue of his writings contains upwards of 1,200 volumes.

DUMAS, JEAN BAPTISTE, one of the most distinguished of French chemists, was born at Alais, department of Gard, in 1800. In 1814 he commenced his medical studies at Geneva, where his devotion to science drew upon him the attention of the Genevan professors. Having formed an acquaintance with Dr. Prevost of Geneva, Dumas and Prevost performed many experiments

together, and published numerous papers on physiological and pathological subjects. The fame of these papers procured him an appointment in Paris, as demonstrator of anatomy at the Ecole Polytechnique, and professor of chemistry at the Athenée. Dumas's researches upon ether, the laws of isomerism, the law of substitution, and the atomic weights of elementary substances, stand out among the researches that make the nineteenth century remarkable in the annals of science.

DUNDONALD, THOMAS COCHRANE, tenth earl of Dundonald, born 14th December, 1775. In his fifth year he was entered on the books of the 'Vesuvius,' then commanded by his uncle, Capt. Cochrane; throughout his entire naval career Lord Cochrane displayed the most consummate ability, and the most dauntless courage. Stripped of all the honours won during a brilliant life by a false charge of having contributed in 1814, to spread a report that Napoleon had fallen, in order to influence the funds, it was only in 1847 that he was reinstated in his rank in the British navy.

DUNGLISON, ROBLEY, M.D., a distinguished medical writer, born at Keswick in 1798: settled in America, and now professor of the institutes of medicine in Jefferson Medical College, Philadelphia.

DUPIN, ANDRE-MARIE JEAN JACQUES, French politician, ex-president of the National Assembly, was born at Vargy, October 6, 1784. He was educated in the institutes as well as the rudiments of law. He was with M. Berryer, the defender of Marshal Ney, in 1815; and as the steadfast enemy of the Jesuits, enjoyed an extended popularity under the restoration. Dupin has directed great attention to the productive powers of France, and has written two works upon that subject. From 1815 to 1830 he was a member of the representative chamber, and combated consistently the arbitrary tendencies of the different governments. In 1830 he became president and speaker of the new parliament. He made a show of moral opposition to the *coup d'état* when the assembly was dispersed, but he has since seen it his interest to reconcile himself to the rule of Napoleon. In point of fact, Dupin is the solitary example of the seduction of any eminent statesman of the old *regime* by the emperor. In his seventy-fifth year, childless, and gorged with wealth, this sordid soul, the defender of freedom under the first Bourbons, the friend and counsel of Louis Philippe, whose property, and the property of whose family Napoleon has confiscated, has not scrupled to stain his reputation by becoming a functionary of the emperor.

DUPONT, PIERRE, a French poet, born at Lyons in 1821. At the time of the *coup d'état* he had the honour to be arrested by order of Louis Napoleon, and sentenced to transportation to Cayenne, a sentence which, from consideration of policy only, was not carried into effect.

DYCE, THE REV. ALEXANDER, author, editor of 'Early English Literature,' and poetical critic, born in Edinburgh, 1798, received the early part of his education at the high school of that city. From Edinburgh he proceeded to Exeter College, Oxford, and having completed his curriculum, received episcopal ordination, and officiated for several years as a curate in Cornwall and Suffolk. In 1827 he came to London, and entered there upon a literary career, in which his general learning, and critical acquaintance with the older writers, have gained him merited distinction. His editions of the elder dramatists display great research, and great critical sagacity.

E

EADIE, JOHN, D.D., LL.D., eminent biblical critic, was born about the year 1814, in Alva, a small town in the shire of Stirling. At a very early period Dr. Eadie began to manifest the possession of superior powers, and having been placed under the care of a distinguished classical scholar —the late Rev. Mr. Browning of Tillicoultry—the youth made rapid progress in all those branches of a liberal education that form a necessary preparation for the sacred ministry. Having completed his preparatory studies, Mr. Eadie entered Glasgow college, and pursued, with remarkable success, the various branches of a liberal education. From Glasgow university he passed with honour to the divinity hall of the U. P. Church, then under the superintendence of Drs. Dick and Mitchell. Having completed his theological curriculum, Mr. Eadie became a preacher of the Gospel. His superior powers were soon appreciated, and at the early age of twenty-one he was ordained minister of the congregation of which he is still the pastor. On the death of the late accomplished Dr. Mitchell, professor of biblical literature to the U. P. Synod, such was the estimate of Dr. Eadie's scholarship and capacity, that he was unanimously appointed to fill the chair of his quondam teacher. While discharging with high acceptability the duties of this professorate, and continuing to minister to his congregation, Dr. Eadie has also devoted himself to the production of not a few works of surpassing usefulness and ability. If we remember rightly, an abridgment of 'Cruden's Concordance' was the first work with which his name was associated, and was undertaken in conjunction with the Rev. Dr. King. This work, containing nearly all that is valuable in the work of 'Alexander the Corrector,' as old Cruden loved to call himself, and being vastly more portable, has become almost a necessary adjunct to every minister's library. Already it has passed through twenty editions. The 'Biblical Cyclopædia,' 'Lectures on the Bible to the Young,' 'Divine Love,' 'A Complete Analytical Concordance,' 'Paul the Preacher,' and a 'Life of Dr. Kitto,' are all peculiarly popular and able works. His Commentaries on Ephesians, Colossians, and Philippians are highly valuable contributions to the science of biblical interpretation. Some of the most erudite and graceful papers in 'The Journal of Sacred Literature' were contributed by Dr. Eadie. The pages of the *North British Review* have likewise been enriched by his pen. His latest production is a touching and admirable estimate of that *facile princeps* of English congregational theologians, the late Dr. Pye Smith. This monograph has been appropriately prefixed to a new edition of the 'Scripture Testimony to the Messiah' of that learned divine.

EASTLAKE, SIR CHARLES LOCK, painter,

and president of the Royal Society, born 1796. Having passed through the usual course of education at the grammar schools of Plymouth and Plympton, he decided upon adopting painting as a profession, and entered as a student at the Royal Academy, London, then under the care of Fuseli. After completing his preparatory studies, Mr. Eastlake visited Paris, to study and copy some of those great works which Napoleon had collected in that nest of the riches of nations, the Louvre. The emperor's escape from Elba interrupted the studies of the painter. Mr. Eastlake accordingly returned to England, and established himself as a portrait painter in his native Plymouth. When Waterloo had extinguished the last hope of empire in the breast of the Corsican, and Britain had decreed his exile, the ship of war which was to carry Napoleon to his ocean prison house lay off Plymouth, with the mighty captain aboard. Mr. Eastlake seized the opportunity thus afforded for securing the last portrait of the emperor obtained in Europe. As he walked the deck of the 'Bellerophon,' the artist sketched him from a boat, and from the sketches thus obtained, produced a full length portrait of Napoleon the Great. With the return of peace, Mr. Eastlake again betook himself to travel, visiting Rome, Greece, and Sicily. In 1823 he forwarded to the exhibition of the Royal Academy views of Rome and its environs, and some pictures of the peasantry of Italy and Greece. In 1828 he contributed his 'Peasants on a Pilgrimage to Rome, first coming in sight of the Holy City.' The work formed one of the leading features of the exhibition, and exhibited far higher power than any of Mr. Eastlake's previous efforts. In 1830, Mr. Eastlake was elected R.A. His next great work, one of the most important of recent contributions to the English historical school of painting, was 'Christ Weeping over Jerusalem.' The deep sentiment of this great picture won its way to all hearts. In 1841, Mr. Eastlake was appointed secretary to the Royal Commission of Fine Arts, formed for inquiring whether advantage might not be taken of rebuilding the houses of parliament to promote the fine arts. The direction of this commission occupied for several years a large portion of Mr. Eastlake's time, and to his exertions much of its success is due. In 1850 Mr. Eastlake was elected president of the Royal Academy, and in the same year he received the honour of knighthood. In 1855 he was appointed director of the National Gallery, with a salary of £1,000 a-year. His previous management as keeper of the National Gallery, together with this appointment, have been the subjects of no small amount of criticism and censure; but into the merits of the controversy it is foreign to our object to enter. Opinion is divided respecting the precise position of Sir Charles as an artist. By some he is esteemed not only the ablest, but also the most learned of English painters, others consider him wanting in that high originality of conception and execution which mark the productions of some less favoured compeers.

EGLINTON AND WINTON, ARCHIBALD WILLIAM MONTGOMERIE, fifteenth earl of, and K.T., lord-lieutenant of Ireland, born at Palermo, 1812. The earl of Eglinton, though a conservative, is perhaps the most popular of the Scottish nobility.

EHRENBERG, CHRISTIAN GODFREY, eminent German naturalist and microscopist, was born on the 19th April, 1795, at Deletsch, in Prussian Saxony. He received his early education at Schulpforte, and commenced the study of medicine at Leipzig, in 1815. In 1817 the law of military service called him to Berlin. In Berlin he became acquainted with the celebrated Hemprich, subsequently Ehrenberg accompanied Hemprich on an eastern tour. In their travels the two companions visited Alexandria, explored the coasts of Lybia, and visited Middle Egypt and the pyramids. The travellers, after returning to Cairo, visited Sinai, Ehrenberg ascertaining by means of the thermometer the exact height of the sacred mount. On his return from eastern travel, Ehrenberg was appointed one of the professors of the faculty of medicine. In 1829 he accompanied Alexander von Humboldt into the 'Ural Mountains,' directing special attention to microscopic investigations. In his 'Cosmos,' Humboldt has done ample justice to the scientific attainments of his fellow-traveller. Ehrenberg's great work on 'Infusoria,' published in 1838, drew upon him the attention of the savants of Europe. Subsequent research has shown that the classification of Ehrenberg was not so accurate as might have been anticipated, but the service it rendered to science was nevertheless of eminent value. Since the publication of that work, Ehrenberg has still further pursued investigations of the fossil forms of microscopic organic beings, the results of these investigations he has embodied in a work entitled 'Micro-geologie.' It is unfortunate that the great micromegas is by no means so successful in interpretation as observation. It has long been known to the scientific world that a half of his infusory animalcules are not animals, but merely minute and low organized plants. Ehrenberg has, however, been foolish enough in his new work to maintain in their entirety his old speculations.

ELGIN AND KINCARDINE, the earl of, K.T., late governor-general of Canada, and now British ambassador extraordinary to China, born 1811.

ELLIS, SIR HENRY, K.H., born 1777, principal librarian of the British Museum, and a voluminous author of works on British antiquities.

ELLIS, REV. WILLIAM, Christian missionary to the Sandwich and South Sea Islands. In 1815, Mr. Ellis connected himself with the London Missionary Society. In November of that year he married Miss Mary Mercy, a young lady devoted to missionary work, and in the following month they embarked at Portsmouth for the scene of their future labours. From the period they landed in the South Seas, until 1824, Mr. and Mrs. Ellis were incessantly engaged in missionary work; and in his 'Polynesian Researches' he has embodied the results of his acquaintance with the condition of the islands, and the character of the populations. Having returned to England, Mr. Ellis acted as one of the secretaries of the London Missionary Society, and from information received from the missionaries, together with official documents, he prepared a 'History of Madagascar.' More recently he has published 'Three Visits to Madagascar,' a work which is highly esteemed, and highly popular. Mrs. Ellis died in January, 1835, and subsequently Mr. Ellis married Miss Sarah Stickney.

a lady well known by her works on female education.

ELLIS, Mrs. Sarah Stickney, formerly Miss Stickney, author of the 'Mothers of England,' the 'Daughters of England,' and numerous works on female education of great excellence.

EMERSON, Ralph Waldo, distinguished American writer and thinker, born at Boston about the beginning of the present century; belongs to the transcendental school of philosophers. Having graduated at the early age of eighteen, at Harvard University, Mr. Emerson accepted an invitation to become the pastor of a unitarian church, in his native city, and during the next seven or eight years he continued to discharge the duties of that office. Some difference of opinion on forms of worship and points of creed, led to the severance of the connection, and he retired from the ministry to give himself up to the free investigation of the principles of theology, of morals, and of philosophy. During several winters he lectured in Boston. He also contributed to the *North American Review* a series of papers on the great writers and artists of Europe. But it was only on the publication of his 'Nature' that the peculiar character of his teaching began to be recognized. 'Man Thinking' was the next embodiment of his special opinions. Called in 1838 to deliver an address to the senior class in Divinity College, Cambridge, the 'idealistic pantheism' of his philosophy was still more fully developed: subsequently he addressed the same views to literary societies of Dartmouth College. The impression produced by these various appearances was immense, and a large section of the youthful theological and literary students of America began to look up to him as their master. In 1840, Mr. Emerson commenced a monthly publication, the 'Dial:' this publication was continued four years. In 1846 he published a volume of poems, that were not very poetical. In 1849 Emerson visited England, receiving a cordial reception from the literary society of London. His impressions of things as they are in England, the result of that visit, has since been published in a small volume, entitled 'English Traits,' not indeed wanting in mannerism, but singularly fair, and justly appreciative. A collected edition of Emerson's works has been published in England, but his influence upon the British mind has been comparatively limited. This circumstance is perhaps accounted for by the fact that he is more an interpreter of Coleridge and Carlyle, than an original thinker.

EOTVOS, Jotsef, one of the most conspicuous men of modern Hungary, was born at Buda, on the 3d September, 1813. After enjoying the instructions of a private tutor, Eotvos was sent to a public school just as his grandfather had rendered himself obnoxious to the Hungarians, by taking part with the Austrian court in raising taxes and recruits, without the consent of the Hungarian diet. Young Eotvos, although then thirteen, could hardly speak his native tongue. His schoolmates reproached him as a traitor for this defect. Stung by these reproaches, and full of republican sentiments imbibed from his tutor, the boy assured his schoolfellows that he would henceforth be liberty's servant. From that day dates his mastery of the Hungarian language, of which he is the first living writer. Eotvos commenced his literary career by a translation of Goethe's 'Goetz von Berlichingen;' this work was followed in 1833 by two original comedies, and a tragedy which was considered a marvel in point of style. In 1836 he travelled in Germany, Switzerland, France, and England. Soon after his return to Hungary, the disastrous inundations at Pesth led to the projection of a publication, the proceeds of which should be given to the relief of the sufferers; of this work Eotvos was the editor. 'The Cartusian,' a novel, was contributed to it by him. The views of life which 'The Cartusian' contained, were too closely allied to those of the Byronic school to escape censure; but while opinion was divided upon the sentiments, there was only one opinion upon the beauty of a style which placed the writer on a level with Kolcrez. Entering the Hungarian diet, the novelist soon distinguished himself in the arena of politics. In 1841 unfortunate financial speculations involved his family in ruin, and Eotvos, from occupying one of the first positions in Hungarian society, was suddenly plunged in comparative poverty. Power and wealth were indeed still within his grasp, had he chosen to make terms with Austria, but the patriot scorned to purchase personal distinction by the disgrace of his country. Eotvos remained faithful to his boyish vow, and rather than sacrifice his principles, preferred to seek his subsistence in the labours of his pen. In pursuance of this resolution, the 'Village Notary' was produced,—one of the best national tales in the whole circle of European literature. The English translation of this work by Otto Wenckstern, published in 1850, is executed with all that taste and power for which Wenckstern is remarkable. This work was followed by a romance entitled 'Hungary in 1514,' a delineation of the peasants' revolt, crushed with the most relentless cruelty by the nobles of that day. Nor while thus engaged upon these varied literary works were his political labours relaxed; the *Pesti Hirlap*, a leading Hungarian newspaper, was enriched by contributions from his pen. In 1848 Eotvos accepted the post of minister of public instruction in the Batthyani administration, and in that capacity brought forward a comprehensive scheme for the improvement of education. The plan was opposed by various parties, but Kossuth, by threatening to resign if the measure was rejected, carried it through the diet. The stormy course of events that shortly followed was ill suited to the temper of Eotvos. Heaven he felt had not made him for revolutions, and he retired from the contest to Bavaria, devoting himself to the preparation of a work on the 'Influence of the Leading Ideas of the Nineteenth Century on the State.' Eotvos's opinion of our age is in singular contrast with the views of our great countryman Carlyle. Referring to the common calumny with which it is assailed by the transcendental school of thinkers, he says,—'Although it is usual to accuse the age of the grossest materialism, a calm consideration of what is going on around us must convince any one that scarcely a century is to be found in which whole nations have more readily offered up all considerations of their material welfare to the realization of ideas.'

ESPARTERO, Joaquin Baldomero, was born Feb. 27, 1793, at Granatula, a village in the

old province of La Mancha. His father was the cartmaker of the village, and had a numerous family. Baldomero being while young of delicate constitution, was destined to literary occupations, and in consequence received a superior education. In 1806 he was sent to the university of Almagro. After two years' study at the university, having accompanied a brother into Andalusia, he entered the army. In little more than a year from the time he had adopted the profession of arms a military school was opened at Cadiz, into which Espartero obtained admission. For four years he continued at this school, acquiring a very complete acquaintance with military science and military tactics. In 1814 he received a sub-lieutenancy. In the following year he proceeded to South America under General Morillo, to defend the Spanish provinces against General Bolivar and his companions in rebellion. After an adventurous ten years passed in South America, Espartero returned to Spain in November, 1825, in the possession at once of considerable fame and considerable fortune. The fortune was ere long increased by alliance with the daughter of a wealthy Spanish proprietor. On the outbreak of the civil war Espartero quickly rose to the chief command of queen's troops. For his services against Don Carlos, he was created a grandee of the first class, with the title of duke of Vittoria. On the usurpation of the regency by the queen-mother, Espartero was appointed regent of Spain. For two years after this appointment he continued to perform the duties of that office. Overthrown by a conspiracy against his authority, he retired to London. Having returned to Spain in 1854, Espartero was again placed at the head of the government, and continued to occupy that position for two years, when an artfully prepared ministerial difficulty necessitated his resignation. The constitutional minister gave place to despotism and O'Donnell.

EUGENIE, empress of France, and countess duchess of Teba, born May 5, 1826, is the daughter of Donna Maria Manuela Kirkpatrick of Closeburn, countess-dowager de Montijos. The father of this lady was English consul at Malaga at the period of her marriage with the Count de Montijos, an officer in the Spanish army. On the death of the count, an event which took place many years ago, the countess was left with a fortune adequate to her position. The family of the countess consisted of two daughters, one of whom married the Duke of Alba. In 1851 the countess of Teba, accompanied by her mother, visited Paris, and during her stay in the French metropolis formed the chief attraction of the entertainments of the Tuileries. When it became known that the northern powers had frustrated the union Napoleon had contemplated with the Princess Carola Wasa, he announced his intention to marry the daughter of the Countess de Montijos. Accordingly, on the 29th January, 1853, the marriage was celebrated at Notre Dame. In 1856 the empress became the mother of an heir to the destiny and hopes of Bonapartism.

EVANS, Lieut.-Gen. Sir De Lacy, G.C.B., M.P., is a native of Ireland, born 1787. In 1807 he became ensign in the 22d regiment of foot, with which he served three years in India. In 1812 he joined the 3d light dragoons, serving with them during the campaign of the Peninsula, and taking part in the chief actions of the war. In 1814 he formed the 5th West India regiment as brevet lieut.-colonel, and was present at the capture of Washington, the attack on Baltimore, and the operations before New Orleans. Returning to England early in 1815, he took part in the battles of Quatre Bras and Waterloo. In 1835 he became commander of the Spanish legion, and again distinguished himself by his genius and bravery on the soil of the Peninsula. In 1831 General Evans was elected a member of the House of Commons. Having lost his seat for Rye, in 1833 he was chosen for Westminster. In 1854 he was appointed to the command of the second division of the army in the East. At Alma and Inkerman he particularly signalized himself. On his return to England he received the thanks of the House of Commons, and was honoured with the Grand Cross of the Bath. India, the Peninsula, America, Waterloo, and the Crimea, are the witnesses of his genius and his valour.

EVERETT, Edward, American orator and diplomatist, born in Dorchester, Massachusetts, April, 1794.

EXETER, Henry Phillpots, bishop of, leader of the high church party in the Church of England, born 1777.

F

FAED, Thomas, a Scottish painter, born 1826.

FAIRBAIRN, William, civil engineer and machinist, was born at Kelso in 1789, and educated as a mechanic in the vicinity of Newcastle-upon-Tyne. In 1817 he commenced business in Manchester in partnership with Mr. Lillie, and the firm soon rose into the very foremost position in the trade of that city. After existing for some twenty years, this partnership was dissolved, Mr. Fairbairn continuing the business. About the year 1830 or 1831 Mr. Fairbairn made some important experiments upon the form and traction of boats on the Forth and Clyde canal. The investigations made upon this subject directed his attention to the advantage of iron as a material for ship-building. The earliest essay at iron ship-building, it is believed, was at Mr. Fairbairn's works, where a small vessel was constructed. The success of the experiment emboldened the experimenter, and by 1836 Mr. Fairbairn had begun the construction of iron vessels of the largest size. Mr. Fairbairn was one of the early members of the British Association for the Advancement of Science. Some of the most valuable results of his researches were first communicated to that learned body. When the crossing the Menai Strait by the Chester and Holyhead railway was under consideration, Mr. Fairbairn's great practical and theoretical knowledge was called into requisition. On the relative portions of the merit of this work due to Mr. Fairbairn and Mr. Stephenson, it is foreign to our purpose to enter. It might, however, have served to keep the controversy on this question within more natural limits had it been remembered that both of these eminent engineers doubtless

possessed much in common of the peculiar knowledge that contributed to the success of that marvel of mechanical science. Mr. Fairbairn has occasionally made his appearance in the lecture-room, discoursing upon engineering to the mechanics of Yorkshire and Lancashire. Respecting his honorary distinctions, we may mention that he is a fellow of the Royal Society, and a corresponding member of the National Institute of France.

FARADAY, MICHAEL, eminent chemist, born 1794, is the son of a blacksmith, and was in youth the apprentice of a London bookbinder. Whilst yet an apprentice, his master called the attention of one of his customers to an electrical machine which he had made. The customer (Mr. Dance) was a member of the Royal Institution, and so struck was he with the promise of rare genius which the construction of the machine displayed, that he at once made the acquaintance of the lad, and took him to hear Sir Humphrey Davy's lectures. These lectures were among the last delivered to the institution by that distinguished man. Young Faraday, disgusted with trade, which he considered selfish, already aspired to devote himself to science. Having communicated his longings to the great chemist, through his good offices he obtained, in March 1813, the post of assistant in the laboratory of the Royal Institution. In the autumn of the same year he went abroad with Sir Humphrey Davy; and returning in the spring of 1815, resumed his labours at the institution, where he has ever since remained. Dr. Faraday's discoveries have raised him to a foremost place among that crowd of illustrious investigators of physical science that adorn our age. His distinguished merits have been long since acknowledged by nearly every learned body in Europe. In 1832 the university of Oxford named him doctor of laws.

FERGUSON, JAMES, architect, was born at Ayr in the year 1808, and received his education at the high school at Edinburgh. After having devoted himself, during four years, to commercial pursuits in Holland and London, Mr. Ferguson proceeded to India in 1829. His first occupation in the Orient was that of indigo planter, and subsequently he became managing partner of a large firm in Calcutta. After a ten years' residence in India he returned to England, having realized, during that brief period, a handsome fortune. Since his return to England Mr. Ferguson has devoted himself wholly to literary and scientific pursuits. In 1849, Mr. Ferguson published the first volume of an 'Historical Inquiry into the True Principles of Beauty in Art, more especially with reference to Architecture.' Subsequently the 'Illustrated Handbook of Architecture' has been published, incorporating the materials intended for the completion of the 'Inquiry.' During his residence in India Mr. Ferguson instituted an examination of the earthwork fortifications of the native races. The results of that examination were embodied in a published essay, and illustrated at the exhibition of 1851 by a model. His theory substituted earthworks for masonry, and as a matter of course was ridiculed by military martinets. The prolonged defence of Sebastopol by earthworks has taught greater respect for his opinions.

FOLEY, JOHN HENRY, sculptor, born in Dublin in 1818.

FONBLANQUE, ALBANY, formerly editor of the *London Examiner*, born in 1797. This eminent journalist has of late years been withdrawn from the newspaper world, by his appointment as chief of the statistical department of the board of trade.

FORBES, SIR JOHN, M.D., an eminent physician, born in Scotland, and graduated at Edinburgh in the year 1817. He was the first amongst English medical practitioners to recognize the importance and value of physical diagnosis as a means of detecting diseases of the heart and lungs. Sir John was one of the founders of the Provincial Medical and Surgical Association. A main object of this association was to obtain information respecting the medical topography of England. As editor of the *British and Foreign Medico-Chirurgical Review*, Sir John did much to elevate the tone of the literature of the profession. Unfortunately, however, the vigour and independence of the Review were not rewarded by pecuniary success. But though pecuniarily a loser by this self-imposed task, it greatly enhanced his reputation. He was appointed physician in ordinary to Her Majesty's household, and physician extraordinary to his royal highness Prince Albert, elected a fellow of the Royal Society, and created a doctor of laws by the university of Oxford. Sir John has ever identified himself with the diffusion of knowledge and education.

FORSTER, JOHN, was born at Newcastle in 1812. Having received an excellent preliminary education, Mr. Forster completed his studies at London University. The first law class of which Mr. A. Amos was the teacher, was attended by him in conjunction with Napier and Whiteside of the Irish bar, Mr. Craig, queen's counsel, and the late Dr. W. Cooke Taylor. The members of this class established a *London University Magazine*, to which they all contributed, and a debating society, in which they all spoke. In 1834 Mr. Forster became connected with the *Examiner*, of which, from 1846, he has been the sole editor. As a journalist, Mr. Forster has long worked in a wide field of usefulness. He has never failed to exhibit a generous appreciation of merit. Early in his literary career he was engaged upon a work of very considerable mark, 'Lives of the Statesmen of the English Commonwealth.' Peculiarly exact in matters of fact, teeming with the best information respecting the men and the times of which it treats, combined with energy and grace of style, render this work at once one of the most useful and attractive memorials of that memorable epoch, when "the crown of England hung on a bush, and Cromwell sat on an ungarnished throne." A revised octavo edition is, we understand, about to appear. Since the original publication Mr. Forster has given the literary world the most delightful and the most erudite 'Life of Oliver Goldsmith' that has yet appeared. The publication of this work involved Mr. Forster in a controversy with another of Goldsmith's biographers, Mr. Prior, who, with more petulance than power, sought to show that Forster had purloined his facts. In this controversy Prior forgot the old adage, "the tools are for those who can use them." The biographic genius of Forster had given a life and beauty to the sterile collection of dry-as-dust detail which

completed a circuit of 12 degrees in diameter north and south, and 10 degrees east and west, having travelled some 3,500 miles. So soon as this second exploration was completed, Captain Fremont started on a third survey. The enterprise was one of peculiar difficulty, but at length every difficulty is surmounted,—the brave-hearted one has passed the last culminating ridge of the Sierra Nevada, and descended into the plains watered by the Sacramento. When he reached California he found the United States and Mexico at war. Captain Fremont accordingly gave his country his energetic services. When these services were no longer needed, he was made the victim of a miserable quarrel between Stocton and Kearney, the military commanders, tried by a court-martial, and deprived of his commission. President Polk signed the sentence, but offered him a new commission of the same rank as the one of which he had just been deprived. Scorning to accept a favour from a man who had denied him justice, he refused the offer and retired into private life. Fremont's last and most disastrous expedition was in the end of 1848 and beginning of 1849. Resolved to settle as a farmer in California, he arranged to have his wife and family transported thither by the usual route. Collecting a strong exploring party, consisting of about 30 men with 130 mules, he proceeded on his journey in the intention of once more crossing the Rocky Mountains. So great were the difficulties of this latest expedition, even its stout-hearted commander began to quail. His mules were dead, his men began to droop: ten had perished amidst the deep snows of the Sierra San Juan. Only after a series of unprecedented struggles, manifesting the most unconquerable energy and the sternest resolution, did the shattered remnant of his followers reach New Mexico. From New Mexico they proceeded to California without further difficulty or further disaster. In the year of Fremont's settlement in the gold regions, California became one of the United States, and on the 10th Sept., 1850, he took his seat in Congress as one of its representatives. In that same year, at the suggestion of the illustrious Humboldt, he received the great gold medal of the Prussian government for his efforts in the advancement of science. Mr. Fremont was a candidate for the presidency of the United States in opposition to Mr. Buchanan at the presidential election of 1857.

FRITH, William Powell, R.A., painter, born at Harrogate, Yorkshire, in 1820.

G

GASKELL, Mrs. L. E., author of 'Mary Barton,' 'Ruth,' 'North and South,' 'Cranford,' 'Memoirs of Charlotte Brontë,' &c., one of the most distinguished of modern novelists.

GAVARNI, the pseudonym by which Paul Chevalier, the most popular living French caricaturist, is known.

GAVAZZI, Padre Alessandro, Italian church reformer, born at Bologna in 1809. At the age of sixteen he became a Barnabite friar, and one of the regular clergy of the catholic church. He was appointed professor of rhetoric at Naples, and distinguished himself by the eloquence of his lectures. His opinions were liberal, and the discourses he delivered in the cities and towns of Italy drew large congregations. In those days, when even Pius IX. was an Italian reformer, he nominated Gavazzi chaplain-general of the Roman volunteers. Throughout the struggle against Austria Gavazzi defended the national cause with all the ardour of his eloquence. He was in Rome during its brilliant defence against the arms of France, stimulating its defenders. On the fall of Rome, provided by General Oudinot with a safe conduct, he passed into England, where he has since distinguished himself as a lecturer upon the abuses of the Papacy.

GEFFS, Guillaume, the most eminent Belgian sculptor, the son of a baker at Antwerp, born about the year 1805. Working in the spirit rather than imitating the forms of the great Greek sculptors, Geffs has thus preserved originality of conception. His works, while exhibiting national character, unite largeness of style with much grace and poetic feeling. Several casts from his works are in the Crystal Palace at Sydenham.

GIBSON, John, sculptor, born 1791, at Conway, North Wales. When the boy was about nine years old, his father, a landscape gardener, was induced, by adverse circumstances, to remove from Conway to Liverpool. While yet a child, young Gibson had acquired, under his mother's fostering care, a good deal of facility in drawing horses, sheep, geese, and generally any field or farm objects. At Liverpool he first saw engravings and pictures of a higher order than the homely prints that hung around the walls of his father's cottage. His ambition was now kindled; he longed to become a painter; but his father not possessing the means of gratifying that ambition, he was apprenticed to a cabinetmaker. Knowing the growing distaste of the youth for this occupation, and having learned his skill in drawing, and passion for art, the Messrs. Frances of the marble works purchased his remaining time for £70, treated him with the greatest consideration, encouraging the development of his powers. His employers introduced their apprentice to Roscoe, who at once placed the art treasures of his magnificent seat (Allerton Hall) at his service, and raised by subscription a sum sufficient to complete his art education at Rome. Gibson set out for Rome in 1817, taking London on his way. In London he visited Flaxman, who generously commended his exertions, and approved of his purposed sojourn in the seven-hilled city. In Rome, Gibson introduced himself to Canova, then the acknowledged sovereign of his art. The great sculptor gave him a cordial welcome, predicted his future eminence, and begged him not to let pecuniary wants disquiet him. The young Englishman had no need of pecuniary assistance, but he entered Canova's studio, and was soon one of his most diligent and successful pupils. Having studied four years under this celebrated master, Gibson began the execution of commissions on his own account in 1821. Since that time his career has been one of uninterrupted success. Mr. Gibson was elected an A.R.A. in 1833, and an R.A. in 1836. He resides chiefly at Rome, only visiting England at distant intervals.

GIBSON, RIGHT HON. THOMAS MILNER, a politician, born in 1807, is the only son of Major Thomas Milner Gibson of the 87th regiment. Entered parliament in 1837 as conservative member for Ipswich, but changing his opinions, he resigned his seat. Thus voluntarily withdrawn from the House of Commons, he flung himself unreservedly into the movement against the corn laws. In 1841 he successfully contested Manchester with Sir George Murray; in 1846 he took office as vice-president to the board of trade under Lord John Russell, but relinquished the appointment from a feeling that it fettered his independence. At last general election he was rejected by Manchester for his views on the war with China, but returned for Ashton-under-Line. He framed the now famous amendment on the conspiracy bill, which shattered the administration of Lord Palmerston.

GILFILLAN, THE REV. GEORGE, critic and essayist, born at Comrie, 1813, where his father was minister of the Secession church.

GIRARDIN, EMILE DE, French journalist, born at Paris, 1802. His early education was neglected, but subsequent application compensated for the neglect. In 1823 he was placed in the cabinet of M. de Sononnes, where he acquired those rules of office, and that knowledge of business so manifest in all his subsequent enterprises. In 1827 he made his *debut* to the literary world by the publication of a romance in the form of an autobiography. In 1828 he started *Le Voleur*, a literary periodical, compiled with considerable tact from other men's writings. After having been connected with numerous literary adventures, more or less successful, in 1836 he founded *La Presse*. This popular newspaper soon involved Girardin in a variety of quarrels with brother editors, and led to that lamentable duel in which Armand Carrel lost his life. M. de Girardin was repeatedly a member of the Chamber of Deputies under Louis Philippe, and he it was who wrote and signed the abdication of the monarch on the 24th February, 1848.

GLADSTONE, THE RIGHT HON. WILLIAM GRANT, M.P. for the university of Oxford, born 29th December, 1809. His father was the late Sir John Gladstone, Bart., of Forgue, N. B., an eminent Liverpool merchant. His mother was Miss Robertson, daughter of the late Provost Robertson of Dingwall, N. B. He received the usual education of youths of his class, passing from Eton to Oxford, where he took what is technically called a double-first,—that is, gained the highest excellence in classics and mathematics. On leaving the university he made the tour of the continent, and on his return was elected member of parliament for Newark through the influence of the late duke of Newcastle. Mr. Gladstone's mercantile origin, the success of his university career, and his habits of business, early recommended him to that astute discoverer of rising merit, the late Sir Robert Peel. In 1834 he was appointed a lord of the treasury under that statesman; and on the failure of the Hon. S. Wortley to obtain his seat when appointed under-secretary for the colonies, Mr. Gladstone was transferred to the vacant office, which he held until the resignation of his chief in the spring of 1835. On Sir Robert Peel's return to power in 1841, he was appointed vice-president of the board of trade, and master of the mint. In this situation he became the right hand of the government. It specially devolved upon Mr. Gladstone to explain and defend its commercial policy, a duty for which his special powers and his mercantile connection rendered him peculiarly fitted. The revision of the British tariff in 1842 was almost exclusively the result of his labours. In May, 1843, Mr. Gladstone succeeded Lord Ripon as president of the board of trade, but resigned early in 1845. In the following year Sir Robert Peel announced his intention of proposing a modification of the existing corn laws. Mr. Gladstone—now secretary of state for the colonies—adhered to his leader. Unwilling to remain under obligations to the duke of Newcastle, he now resigned his seat for Newark, and remained out of parliament for several months; but at the general election of 1847, he was chosen as representative for the university of Oxford. When the earl of Derby succeeded to power in 1852, Mr. Gladstone was offered the chancellorship of the exchequer, but declined to serve under the noble earl. On the fall of the Derby administration, to which, indeed, Mr. Gladstone's brilliant review of Mr. Disraeli's budget mainly contributed, he became chancellor of the exchequer under Lord Aberdeen. On the break up of the Aberdeen government he was appointed to the same position under Lord Palmerston. The conduct of Lord Palmerston with reference to the Sebastopol committee ultimately induced him to withdraw from the government of the noble lord. Mr. Gladstone's acceptance under Lord Derby of a mission to the Ionian Islands, has been the topic of much comment, and some little censure. But whatever may be thought either of its policy or its success, the entire disinterestedness with which it was entered upon and executed, is unquestionable. Mr. Gladstone married in 1839 the eldest daughter of the late Sir Stephen Richard Glynne, Bart. In the same year he published that work—'The State in its Relation to the Church'—which Macaulay subjected to so trenchant a criticism. This book was followed by another, 'Church Principles Considered in their Results.' Whatever difference of opinion might exist respecting the principles of these works, their publication stamped their author as one of the few original thinkers of the age. Mr. Gladstone's 'Letters on the State of the Neapolitan Prisoners,' addressed to Lord Aberdeen, gave convincing evidence, that however much he might sympathize with what are called high church principles, a wide gulf separated him from the creatures of sacerdotal tyranny. These letters, translated into the languages of the continent, and transmitted by Lord Palmerston to all our ambassadors, produced a powerful sensation, and resulted in some little amelioration of the condition of the victims of the oppressor. Mr. Gladstone's reputation as an orator is of the highest order. His voice clear and musical, his perfect command of language, the exquisite finish and flow of his periods, the extent and accuracy of his knowledge, and his exhaustive powers of reasoning, all conspire to place him in the foremost position. Mr. Gladstone's latest work,—'Homer and the Homeric Age,'—obviously the fruit of solid studies,

is a noble contribution to the elucidation of the noblest literary production of ancient Hellas.

GLEIG, THE REV. GEORGE ROBERT, author, born 1796, is the son of a Scotch bishop.

GLYN, MISS ISABELLA, eminent actress, born at Edinburgh, 1823. A few years ago she married Mr. Dallas, author of the 'Theory of Poetics,' and one of the *Times* staff.

GODWIN, GEORGE, architect, editor of the *Builder*, was born on the 28th January, 1815, at Brompton, Middlesex. His first literary work connected with architecture, was an essay on 'Concrete,' prepared for the British institute of architects, for which he received, in 1836, their first medal. This essay, printed in the *Transactions* of the institute, has remained a standard authority, and has been translated into several of the languages of Europe. Mr. Godwin became editor of the *Builder* in 1844. His literary services to the advancement of architecture, science, social and sanitary improvement, since he assumed that office, have been most meritorious and unremitting.

GOLDSCHMIDT, MADAME JENNY LIND, born at Stockholm, Sweden, in 1821. When only a child of three years of age, she could sing correctly any melody she once heard. At the age of nine, happening to be introduced to Madame Lundberg, a favourite actress of Stockholm theatre, the lady was so charmed with the young singer, that having induced her parents to devote her to musical studies, she placed her under the instruction of Croelius, at that time the most renowned teacher in Stockholm. Through the good offices of Croelius Jenny Lind was placed among the pupils of the musical academy. Here, after securing for a time the reputation of a prodigy, her voice lost its sweetness and she was forbidden to sing. For four years she devoted herself to musical studies. At the close of that period accident again brought her into notice. The female vocalists of Stockholm were found unwilling to accept the part of Alice in the fourth act of Meyerbeer's 'Robert le Diable,' the character was offered, in the extremity, to Jenny Lind. The extraordinary success which followed this slight effort induced the director of the academy to offer her the part of Agatha in Weber's 'Freischutz.' This character, which for years she had ardently studied, Madame Goldschmidt regards as the foundation of her fame. After singing with the greatest success for about a year and a-half at the opera in Stockholm, in the company of her father she made the tour of the chief towns of Norway and Sweden. With the savings of that tour she proceeded to Paris, and placed herself under Garcia, then esteemed the greatest singing master. Garcia condemned the youthful vocalist to three months of silence. At the expiry of that period he pronounced her voice greatly improved. Garcia, however, failed to appreciate the genius of his pupil. Having been about a year in Paris, a Swedish composer introduced her to Meyerbeer. Meyerbeer gave her an invitation to Berlin, and from the day she appeared in Berlin until her retirement from the musical stage, her fame was steadily on the increase.

GOODALL, EDWARD, eminent engraver, born at Leeds in 1795, best known by his engravings after Turner.

GOODALL, FREDERICK, historical painter, born in London, 1822.

GORDON, SIR JOHN WATSON, R.A., was born in Edinburgh, towards the close of the last century, and received his professional education in the Trustees' Academy, of which Mr. Graham was then master. During the period of his early studies, young Gordon was ambitious to become an historical painter; but after pursuing for a time history and poetry, he at length devoted himself exclusively to portrait painting. His professional life has been spent in Edinburgh, where he is regarded as the not unworthy successor of Raeburn. During his long career, Sir John has painted almost all the leading and distinguished men in Scotland. His portraits of his countrymen, it has been well remarked, are as thoroughly characteristic as the heads of Titian's Venetian senators, or Rembrandt's burgomasters. In 1841, Gordon was elected an associate of the London Royal Academy. On the death of Sir W. Allan, in 1850, he was unanimously elected president of the Scottish Academy; soon after this event, he was knighted by Her Majesty, and appointed painter limner to the Queen in Scotland; he was also elected a Royal Academician. Sir J. Watson Gordon was one the earliest members, and has always been one of the warmest friends of the Scottish Academy.

GORDON, LADY LUCIE DUFF, daughter of Mr. Austin, and wife of Sir Alexander Duff Gordon, a distinguished translator.

GORE, MRS. CATHERINE GRACE, a prolific writer of fiction.

GORGEI, ARTHUR, was born on the 5th Feb., 1818, at Toporez in Upper Hungary. In 1832 he was sent to the military school at Tuln, where he remained for five years, when his father's influence procured him a commission in the royal Hungarian life guards stationed at Vienna. In 1842 he was attached to the huzzars of the Palatinate with the rank of lieutenant. Subsequently he quitted the army, and devoted himself to the study of science, chiefly chemistry. At the call of the Hungarian committee of defence, Görgei exhanged the laboratory for the camp, and became a captain of honveds. From this comparatively humble rank he soon rose to the position of commander-in-chief of the Hungarian national army. Personal ambition and personal animosities paralyzed his military genius, and, in a moment of adverse fortune, he surrendered at discretion to the representative of Russia. Since the fall of Hungary he has resided at Klogen. In 1852, he published at Leipzig a vindication of his 'treason,' which has since been translated into English under the title of 'My Life and Acts in Hungary.'

GORTSCHAKOFF, PRINCE ALEXANDER, Russian diplomatist, born 1800.

GORTSHAKOFF, PRINCE MICHAEL, commander-in-chief of the Russian army of the south, born 1795.

GOSSE, PHILIP HENRY, a pleasing and popular writer on natural history, born at Worcester in 1810.

GOUGH, VISCOUNT HUGH, conqueror of the Sikhs, born 1779.

GOUGH, JOHN, eminent temperance lecturer, born, 1817, at Sandgate, Kent.

GOULD, AUGUSTUS ADDISON, eminent naturalist, born 23d April, 1805, at New Ipswich, New Hampshire, has contributed largely to popularize his favourite science. The work by which he is best known in Britain is 'Principles of Zoology,' by Louis Agassiz and Augustus A. Gould, a work which has been republished from the Boston edition in Bohn's scientific library.

GOULD, BENJAMIN APTHORP, born Sept. 27, 1824, in Boston, graduated at Harvard College in 1844, and at Gottingen in 1848. In 1849 he established the 'Astronomical Journal,' which he edits with great ability.

GOULD, JOHN, distinguished naturalist, born at Lyme, Dorsetshire, in 1804. Mr. Gould's contributions to natural science have been numerous and important. 'A Century of Birds from the Himalaya Mountains' and the 'Birds of Australia,' are the chief of his varied contributions to the science of the ornithologist.

GRAHAM, RIGHT HON. SIR JAMES ROBERT GEORGE, distinguished statesman, with great administrative talents, born June, 1792. Educated at Westminster, and at Queen's College, Cambridge. He entered public life as secretary to Lord Montgomerie, in Sicily, and continued the service under Lord William Bentinck. In 1818 he was chosen member of parliament for Hull, he then professing ultra-liberal principles. His principles being much opposed to those of his father, the expenses of this election, £13,000, were defrayed by others. He retained his seat only a short time, though sufficiently long to render himself formidable by his powers of sarcasm. At this time Sir James was an eminent and prolific pamphlet writer, thundering against the corn laws, advocating May-poles, and opinions very much akin to those subsequently known as the opinions of the young England party. In 1823, Sir James Graham succeeded to his father's baronetcy. In 1826 he was returned as member for Carlisle, in the radical interest, and in 1830, he accepted office under Earl Grey as first lord of the admiralty. In 1831 he was nominated one of the committee of four to consider Earl Grey's promised reform bill, and it was on the report he contributed to frame that the measure ultimately passed was formed. In 1834, in conjunction with Lord Stanley, Sir James left the Grey cabinet, on what is known as 'the Appropriation Clause.' In 1841 he became home secretary under Sir Robert Peel, and took an active part in the establishment of the new Tariff, the income tax, and the factory act. In 1844 he had the misfortune to become for a time the most unpopular of public men. The tragic fate of the brothers Bandiera induced Mazzini to suspect that his letters had been opened in the London post office, and their secrets betrayed. By an adroit stratagem, suspicion was converted into conviction. The member for Finsbury, Mr. Thos. Duncombe, brought the subject before the House of Commons, commenting upon the espionage in a strain of the most withering invective, and assailing the knight of Netherby with the bitterest personal taunts. When Sir Robert Peel inaugurated his free trade policy, Sir James was found by his side combating with all the vigour of his trenchant logic the fallacies of protection. Sir James Graham retired from office on the defeat of the Irish coercion bill, and did not again enter any government until the formation of the coalition government of Lord Aberdeen. In it he succeeded to his old position as first lord of the admiralty. For a few days after the formation of Lord Palmerston's government he retained office, but resigned from not sharing the opinions of its chief on the justness of the Russian war.

GRANVILLE, GEORGE LEVESON GOWER, Earl, eldest son of the first Earl Granville, by the daughter of the fifth duke of Devonshire, was born May 11, 1815, educated at Eton and Christ Church, Oxford, where he graduated in 1834. In the following year he became *attached* to his father's embassy, at Paris, but returned to England in 1836, when he was elected member of parliament for Morpeth, and shortly afterwards became under secretary for foreign affairs. In 1840, he was attached to the Russian embassy, but was again returned to parliament in the general election of 1841. In the early part of his career he spoke but seldom, and made no impression on the house. On the death of his father, in 1846, he was called to the House of Peers. Lord John Russell's ministry was then being formed, and Earl Granville accepted office as master of her Majesty's buckhounds. Constitutionally rather a courtier than a politician, this appointment was admirably adapted to bring into play those powers in which he excelled. As chairman of the executive committee of the Great Exhibition, Earl Granville contributed largely by his amiability and management to the general success of the enterprise. When, in 1851, Lord Palmerston was voted from the Russell cabinet, for his unconstitutional recognition of the *coup d'état*, by which the president of the French republic became emperor, Lord Granville succeeded the veteran diplomatist as foreign secretary. He was subsequently president of the board of trade, under Lord Aberdeen, and president of the council, under Lord Palmerston. In 1840, he married Maria, daughter of the Duc de Dalberg, and widow of Sir Ferdinand Dalberg Acton, Bart.

GRATTAN, THOMAS COLLEY, popular novelist, born in Dublin, 1796.

GRAY, ASA, M.D., a distinguished American botanist, born at Paris, New York, in 1810, author of numerous standard works.

GREELEY, HORACE, editor of the *New York Tribune*, born at Amherst, in New Hampshire, Feb. 3, 1811.

GREY, RIGHT HON. SIR GEORGE, Baronet, cousin of Earl Grey, was born in 1799, and graduated at Oriel College, Oxford, in 1821, taking first-class honours in classics. He was called to the bar in 1826, and shortly subsequently he entered parliament, in the whig interest, in December, 1832, as M.P. for Devonport. Sir George Grey has been successively under-secretary for the colonial department, from 1834 to 1839; judge-advocate-general from 1839 to 1841; and home secretary from 1846 to 1852, under the administration of Lord John Russell. On the accession of Lord Palmerston to power in 1855, he was again appointed to the same post.

GREY, HENRY GEORGE, third earl, eldest son of Charles, second earl, was born December 28,

1802, received his education at Trinity College, Cambridge, and entered parliament in 1829 as member for thenow disenfranchised borough of Winchelsea; at the following election for Higham Ferrers; and in 1831, for the county of Northumberland. On the formation of his father's cabinet, he became under secretary of state for the colonies, but a difference with Lord Stanley upon the question of slave emancipation led to his resignation of that post. In 1835, he became secretary at war under Lord Melbourne. At the general election in 1841, he found himself excluded from the representation of the northern division of Northumberland, but gaining a seat for Sunderland, he rejoined his party in opposition to Sir Robert Peel. In 1845, on the death of his father, he was called to the House of Peers, and in the following year he became colonial secretary in the administration of Lord John Russell, a position in which he attained a large measure of unpopularity. Retiring from office in 1852, he vindicated his policy in a work published in the subsequent year. He opposed the government of Lord Derby, and seemed indifferent to the government of Aberdeen. Lord Palmerston offered him the war department under his administration, but the offer was declined. Like his father, he seems a strange combination of liberal ideas and aristocratic prepossessions.

GRIFFIN, JOHN JOSEPH, an English chemist, born in London in 1802, author of 'Chemical Recreations,' a work which has done more to popularize the study of chemistry in Britain, than any publication which has appeared. Mr. Griffin is also author of a 'Treatise on the Blowpipe,' 'The Radical Theory of Chemistry,' and of a 'System of Crystallography.' To him the science of chemistry is indebted for numerous cheap and handy articles of apparatus, which have enabled the poorest student practically to follow out its principles.

GROTE, GEORGE, M.P., banker, politician, and historian of Greece, b. 1794, at Clayhill, Beckenham, Kent. Mr. Grote's historyof Greece commences with the earliest period of heroic legends, and terminates with the death of Alexander the Great. For depth of research, independence of thought, and sound critical sagacity, it is one of the most important works in English historical literature.

GUIDIN, THEODORE, the most distinguished French marine painter of the day, was born at Paris, in 1802. He first exhibited at the Salon, in 1822; in 1824 he obtained the second-class medal; and in 1827 the government recognized his merit by naming him chevalier of the Legion of Honour. When Louis Philippe resolved to carry on the decorations of Versailles, Guidin was commissioned to paint the principal events in the naval history of France. In the execution of this commission, which bore date, 1838, Guidin worked assiduously for ten years, until the revolution of February, 1848, terminated his labours. During that decade his facile pencil had produced no less than sixty-three marine paintings, many of them of considerable size. Since the revolution, Guidin has visited Scotland. His coast scenes near Aberdeen, and Moonrise on the Aberdeen coast, were produced during this visit. Laborious practice has not improved the style of Guidin, who seems more and more, as employment flowed upon him, to have receded from the simplicity of nature, and indulged an affected and melo-dramatic style.

GUIZOT, FRANCOIS PIERRE-GUILLAUME, eminent historian of the civilization of Europe, &c., ex-minister of France under Louis Philippe, born October, 1787. His father, an advocate of Nismes, fell a victim of the French revolution only three days after the triumph of Robespierre over Danton, Camille Desmoulins, and the men of the committee of clemency. After this fatal catastrophe, Madame Guizot left Nismes to seek at Geneva consolation for her great sorrow in the bosom of her family, and in a solid education for her children. Guizot, placed at the gymnasium at Geneva, devoted himself exclusively to study. The child had no childhood, his playthings were books, and at the end of four years the young scholar was able to read, in their respective languages, the great masterpieces of the ancient and the modern world. Having completed his collegiate studies with brilliant success, M. Guizot proceeded to Paris to prepare himself for the bar. The law schools had disappeared amidst the revolutionary whirlwind, and the young student, not caring for the imperfect knowledge private seminaries might supply, resolved to master it in solitude. The serious nature of the Genevese scholar found little that was genial in the dissolute society of the metropolis of France. The first year of his residence in Paris was one of sadness and isolation. In the following year he became attached, as tutor, to the household of M. Stapfer, minister for Switzerland at the French court. This connection introduced Guizot to the society of the woman who was destined to exercise so noble and beneficial an influence over his whole life. Born of a distinguished family that had been ruined by the revolution, Mademoiselle Pauline de Meulan had found resources in an education as solid as it was varied, and, to support herself, had entered upon the career of a journalist. A serious malady, the result of excessive toil, obliged her to suspend her literary labours. Her situation threatened to become critical, hope had almost withered into despair, when she received an anonymous letter entreating her to be tranquil, and offering to discharge her duties on the *Publiciste* during the continuance of her illness. The letter was accompanied by an admirably written article modelled upon her own style. The article was accepted—published, and a similar contribution received every week until the editress was convalescent. Not until repeatedly solicited to disclose his incognito did the young student reveal himself. Five years after this romantic episode, Mademoiselle de Meulan was transformed into Madame Guizot. During these five years Guizot was busily occupied in those historical studies from which he has since reaped so large a harvest of fame. In 1812 he became assistant professor of history in the faculty of letters, and subsequently obtained complete possession of that chair. Here it was Guizot formed that attachment with the then professor of the philosophy of history, which has so often associated his name with the name of M. Royer Collard. Guizot's career, hitherto purely literary, was now to become identified with the political fortunes of France. The post of secretary-general was his first step in the path of politics. In this position he took part in preparing those

laws against the press which were, in 1814, presented to the chambers by the minister of the interior, M. de Montesquieu. Placed amidst contending factions, more conservative than satisfied the instincts of the one, and more constitutional than suited the tastes of the other, Guizot in office was but ill at ease. Napoleon's return from Elba released him from the difficulties of his position. When the fall of the emperor became evident, Guizot repaired to Ghent to plead the cause of the charter before Louis XVIII. In the violent storm which shook the chamber of 1815, the constitutionalist did his utmost to moderate the partizans of absolute royalty. On the fall of the ministry of the Duke Decazes, trampled upon as revolutionary by the counter revolution, Guizot accompanied the constitutional party into opposition, combating with all the energy of his powerful pen the administration of Villele. Villele avenged the antagonism of Guizot by interdicting his lectures as professor. Renouncing the questions of the hour, Guizot now undertook that series of great historical works which have given him so distinguished a place in literature. At this time it was that the collection of 'Memoirs Relative to the English Revolution,' 'The History of the English Revolution,' 'Memoirs Relative to the History of France,' and 'Essays on the History of France,' were successively published. In 1827, death deprived him of the companion of his labours—that beloved wife whose serene and lofty intelligence had sustained him amid the agitations of his career. On the fall of the Villele ministry, Guizot, reinstated in his professorial chair, began his lectures on the 'History of Civilization in France.' On the formation of the Polignac cabinet, he was elected for Lisieux, and voted for the address of the 221, adding to his vote these words, 'Truth has already trouble enough in penetrating to the council of kings—let us not send it there pale and feeble.' It was his wish that the throne should have one other chance, but the warning voice was unheeded. On the eve of the revolution, Guizot drew up the protest of the deputies against the ordinances of July; and, on the fall of monarchy, he read in the chamber the proclamation which constituted the duke of Orleans lieutenant-general of France. Upon the accession of Louis Philippe to the throne, Guizot became minister of the interior. In the Soult cabinet, formed in 1832, he was minister of public instruction, and in that capacity did much for the cause of education in France. With the exception of the time during which he filled the London embassy, he was a member of nearly every administration formed under the citizen king, and had Louis Philippe only followed his stern counsel, the throne of the barricades had probably still stood erect—unmoved—unshaken.

GUTHRIE, THOMAS, D.D., theologian, orator, and philanthropist, born in 1800. He studied at the university of Edinburgh, for the Scottish Church; and after having been licensed to preach the gospel by the presbytery of Brechin, he proceeded to Paris, where he acquired a knowledge of medicine, with a view to assist the poor medically, when engaged in his pastoral duties. In 1830 he was ordained minister of the parish of Arbirlot, in his native county. Subsequently he was appointed to the collegiate church of Old Greyfriars, Edinburgh; and in 1840, to St. John's, a new church and parish, originating in his extreme popularity. When the non-intrusion controversy arose, he was found by the side of Dr. Chalmers, combating with all the energy and all the earnestness of his nature for those principles of spiritual independence for which his party afterwards relinquished the emoluments and position of ministers of the National Church. No man exerted a wider influence upon the popular mind in connection with that great struggle; but when the contest was over, scorning to sustain party antipathies, he betook himself to that career of active benevolence with which his name has long been so honourably associated. In 1847 he published that appeal on behalf of the destitute and homeless children of the Scottish capital, which led to the establishment of the Edinburgh original ragged or industrial school, which has proved so salutary in the reformation of the young Arabs of the city. Dr. Guthrie is an active promoter of the temperance movement, to which he has devoted a large amount of zealous effort. 'The City: Its Sins and Sorrows,' is a memorial of his labours in that important walk of philanthropy. 'The Gospel in Ezekiel,' and 'Christ the Inheritance of the Saints,' embody good illustrations of his general pulpit efforts. In illustrative and pictorial power, Dr. Guthrie is without a rival among the pulpit orators of Britain.

GUYON, GENERAL RICHARD DE BAUFRE, was born March 31, 1813, at Walcot, near Bath, in which city he received his early education. His grandfather was a captain in the dragoon guards, and his father, John Guyon of Richmond, Surrey, was a commander in the royal navy, and died in 1844. At the age of eighteen Guyon obtained a commission in the Hungarian hussars of the Austrian army. After some years' service he was appointed aide-de-camp to field marshal Baron Splengi, commander of the Hungarian life guards. In November, 1838, he married the daughter of Splengi, and soon afterwards retired from the army. In 1848, when the Ban of Croatia invaded Hungary, Guyon offered his services to the Hungarian diet, and received the appointment of major of honveds, or national guards, and materially contributed to the defeat of Jellachich at Sukow. In the month following that defeat, Major Guyon achieved at Mannoworth the only success of that disastrous day. His horse shot under him, he led his troops to the charge on foot, and armed them with the muskets of the fallen foe in place of the scythes with which many of them had fought. For his gallantry on that day he was raised to the rank of colonel on the battle-field. At Debreczin he was named general. Guyon's career as a general was a series of brilliant adventures. He commanded the rear of Gorgei's army on the march from Pesth to Upper Hungary, and on the 5th February, with 10,000 Hungarians, he stormed the defiles and heights of Branzisko, defended by 15,000 Austrian troops, and cleared the way for the van of the army to pass, Gorgei having vainly attempted to turn the defiles by a flank movement. On the fall of the hopes of Hungary by the resignation of Kossuth and the surrender of Gorgei, Guyon escaped to Turkey, was offered and accepted service under the Turkish government.

H

HAGENBACH, CHARLES RUDOLPHE, an eminent German protestant theologian, born at Basle in 1801.

HAGHE, LOUIS, an eminent painter in water colours, born in Belgium in 1802, but has long resided in England.

HAHN, HAHN, Countess Von, a German poetess, born at Tressow in 1805.

HALEVY, JACQUES-ELIE-FROMENTAL, a popular French musical composer, born at Paris in 1799.

HALIBURTON, SIR T. C., Judge, a humorous author, popularly known as Sam Slick, formerly a Nova Scotia judge.

HALL, MRS. ANNA MARIA, is a native of Wexford, but quitted Ireland at the age of fifteen. An acquaintance with Mr. S. C. Hall, resulted in a life union; and, in common with her husband, Mrs. Hall devoted herself to letters. Her first work, 'Sketches of Irish Character,' appeared in 1829. In the 'Buccaneer' Mrs. Hall made her *debut* as a novel writer in 1832. 'Lights and Shades of Irish Character,' 'The Groves of Blarney,' 'Marion; or, a Young Maid's Trials,' 'The Chronicles of a Schoolroom,' 'The Outlaw and the Whiteboy,' are Mrs. Hall's chief independent contributions to literature. The *Art Journal* and *Chambers's Journal* have also been frequently enriched by her pen.

HALL, RIGHT HON. SIR BENJAMIN, M.P., was born in 1802, received his early education at Westminster school, and Christ Church, Oxford. First entered public life in 1831, when he was returned to parliament for Monmouthshire, in opposition to the marquis of Worcester, afterwards duke of Beaufort. Though unseated on petition after the passing of the Reform Bill in 1832, he was re-elected, and continued to represent Monmouthshire until 1837, when he was elected for Marylebone, which he still continues to represent. From his first entrance into public life, he has devoted great attention to parliamentary business. He is the advocate of education, extension of the suffrage, and of the abolition of church rates. In 1854 he was appointed president of the board of health, and was a sworn member of the privy council. In 1855 he succeeded Sir William Molesworth as chief commissioner of public works. On the fall of the cabinet of Lord Palmerston, the right hon. baronet retired from office. For his public services on the occasion of the Queen's coronation in 1838, Sir Benjamin Hall was created a baronet.

HALL, SAMUEL CARTER, editor of the *Art Journal*. The work by which he is best known, is an illustrative work on Ireland, the joint production of Mr. and Mrs. Hall. He has also edited several illustrated books.

HALLECK, FITZ-GREENE, an eminent American poet, born at Gilford, Connecticut, in August, 1795; entered a banking house in New York in 1813, and resided in that city, engaged in mercantile pursuits, being for many years confidential agent for the American Rothschild, John Jacob Astor. Mr. Halleck commenced contributing to the journals of the day at an early age; and, when settled in New York, was known as an associate of the wits about town. In 1821 Mr. Halleck published his largest poem, 'Fanny,' a satire upon the literature and politics of the time, in the measure of 'Don Juan.' In 1822-23 he visited Europe; and the reflections suggested by his travels are embodied in his poems on Burns and on Alnwick castle, which, with some other pieces, were published in 1827. The Burns poem is one of the finest tributes to the memory of the bard the muses have offered at his shrine.

HALLIWELL, JAMES ORCHAND, a distinguished Shakspearian critic, born at Chelsea, in 1820.

HAMILTON, THE REV. JAMES, D.D., minister of the English presbyterian church, Regent Square, London, born 1814, at Strathblane.

HAMMER, PURGSTALL JOSEPH, Baron De, celebrated Oriental traveller, linguist and diplomatist, born 1774, at Greatz Styrie. Has written voluminously upon Eastern subjects, his 'History of the Ottoman Empire,' of 'Arabian Literature,' and 'Persian Oratory,' are among his chief works. In 1810 Hammer founded, at Vienna, the journal *Les Mines de l' Orient*.

HAMPDEN, RENN DICKSON, D.D., bishop of Hereford, born towards the close of the last century, entered Oriel College in 1810. Having been successively fellow and tutor; public examiner in classics; Bampton lecturer; professor of moral philosophy; and regius professor of divinity, in 1847 Dr. Hampden was elevated to the episcopal bench, by being appointed bishop of Hereford. The appointment originated a fierce controversy in the English Church. Dr Hampden's contributions to philosophical literature are numerous and valuable. His articles on Socrates, Plato, and Aristotle, in the 'Encyclopædia Britannica,' and the review of the scholastic philosophy in the 'Encyclopædia Metropolitana,' have elicited the commendation of all competent critics. With reference to his review of the philosophy of the schoolmen, Hallam has thus spoken:—'Dr. Hampden has the merit of having been the only Englishman, past or present, since the revival of letters, who has penetrated far into the wilderness of scholasticism.'

HANNAH, JAMES, author and journalist, born at Dumfries in 1827.

HARDWICKE, CHARLES PHILIP YORKE, lord privy seal in the ministry of Lord Derby, eldest son of the late Admiral Sir J. S. Yorke, was born on the 2d April, 1799; educated at Harrow and the Royal Naval College, Portsmouth.

HARRIS, THE RIGHT HON. JAMES HOWARD, third earl of Malmesbury, secretary of foreign affairs in the ministry of Lord Derby, born 25th March, 1807; educated at Eton and Oriel College, Oxford. Shortly after quitting the university, he married Lady Emma Bennet. In 1841, as Viscount Fitz-Harris, he was returned to the House of Commons as member for Wilton. Scarcely, however, had he taken his seat among the people's representatives, when the unexpected death of his father called him to the upper house. His conduct there was singularly unobtrusive; and not until 1852 was public attention drawn towards him. His selection by Lord Derby as minister for foreign affairs, during his short-lived adminis-

tration, first drew the noble lord from the obscurity he had hitherto courted. The friends of the noble earl claim for him the merit of having preserved inviolate the chastity of the national honour, at that critical juncture, when Lord Palmerston, expelled from office, was succeeded by Lord Derby. An impartial observer might be apt to deny to the minister more merit in that crisis than simply belongs to the registrar of the national will. The emperor of the French and Lord Derby's foreign secretary are old friends; and so far as the diplomatic relations of the two countries are concerned, there has been just rather much of the friend, and rather little of the minister, about the mode in which negotiations have been conducted.

HARVEY, GEORGE, eminent painter, born at St. Ninians, near Stirling, in 1806. From an early age he displayed a predilection for the art in which he has now attained so much distinction; and during the hours not devoted to business, young Harvey might be seen, morning and evening, sketch-book in hand, prosecuting his favourite study. At the age of eighteen, he entered the drawing school of the Trustees' Academy, Edinburgh, and soon attracted special attention by his superior powers. When, in 1836, the Scottish artists agreed to establish an academy of their own, George Harvey entered the new institution as an associate, a title, three years afterwards, exchanged for that of academician. Since then he has zealously devoted himself to promoting the interests of the Academy. George Harvey is pre-eminently a Scottish painter; and among the small band of artists who have consecrated their genius to Scottish subjects, is unquestionably the most highly gifted. His best known works are 'Covenanters Preaching,' 'Covenanters' Baptism,' 'Battle of Drumclog,' 'The Covenanters' Communion,' 'Duke of Argyle, an hour before his Execution,' 'Quitting the Manse.' An intense sympathy with whatever is noble in Scottish story animates the painter, giving depth, power, and truthfulness to all his productions.

HAWTHORNE, NATHANIEL, a popular American writer, was born at Salem, Massachusetts, in 1807, and graduated at Bowdoin College, Maine, in 1825. His earliest volume was an anonymous romance published in Boston in 1832, which he has never thought fit to claim. In 1837 he published his 'Twice told Tales;' and in 1842 he gave the world a second series, and a new edition of the first. In 1846 'Mosses from an Old Manse' appeared. The title of the work was derived from the novelist's residence. In 1843 he had become the occupant of an old parsonage in Concord, where he composed the papers of which that volume is made up. In 1846 he received the appointment of surveyor in the customhouse at Salem. On a change of ministry this post was relinquished, just as Hawthorne had given proof of surpassing practical capacity. Customhouse duties abandoned, he again betook himself to literature. In 1850 he published the 'Scarlet Letter,' which has commanded an extensive popularity on both sides of the Atlantic. This romance exhibits extraordinary powers of analysis in combination with a no less remarkable power of graphic description. The 'Scarlet Letter' was succeeded by 'The House with the Seven Gables,' and the 'Seven Gables' by the 'Blithedale Romance.' In addition to these, his principal works, Mr. Hawthorne has published several stories for children, and a small volume of biography, 'The Life of His Excellency Franklin Pearce, late President of the United States.' He is now American consul at Liverpool.

HEAD, SIR FRANCIS BOND, Bart., K.C.H., formerly a major in the army, was born in 1793. In 1835 he was appointed governor of Upper Canada. His injudicious measures while holding that responsible position, resulted in an insurrection, which was not fully quelled until the arrival of his successor, Sir George Arthur. Sir Francis is one of the alarmists about a French invasion of Britain, and has consequently written copiously upon the defenceless state of the country. 'A Fagot of French Sticks,' 'A Visit to Ireland,' 'Bubbles from the Brunnen of Nassau,' and 'Rough Notes of a Journey Across the Pampas,' are his principal works. In 1838 he was created a baronet, and for his services to literature he enjoys a pension of £100, though, what these services have been, it would be difficult to determine.

HENLEY, THE RIGHT HON. JOSEPH WARNER, M.P., late president of the board of trade under Lord Derby, was born in 1793; educated at Oxford, where he graduated with some distinction as a B.A. in 1815; twenty years afterwards he took his degree as M.A.; and again, after an interval of other twenty years, he received, some short while ago from his *alma mater* the honorary degree of D.C.L. At the general election of 1841, Mr. Henley was first returned to that seat in the House of Commons which he has ever since occupied —viz., as one of the three representatives of Oxfordshire. Mr. Henley was selected by Lord Derby in 1852, for the position he has again held in the tory ministry. The reform bill of the noble lord not being satisfactory, he retired, in conjunction with Mr. Walpole, from his position in the cabinet.

HERBERT, RIGHT HON. SIDNEY, M.P., second son of the eleventh earl of Pembroke, by a daughter of the late Count Woronzow, of Russia, was born in 1810. Having received his preliminary training at Harrow, he entered Oriel College, Oxford, where he graduated with classical honours in 1831. In the following year he entered public life as member for the southern division of Wilts, in the conservative interest. His first speech in the House of Commons was made in seconding a motion for the exclusion of dissenters from Oxford. He opposed the ballot when proposed by Mr. Grote in 1838; and, generally, he opposed all the measures of the Melbourne cabinet down to its fall in 1841. Gradually, however, Mr. Herbert became imbued with views more liberal than his early creed. When, in 1841, Sir Robert Peel came into office, Mr. Herbert was among the first to accept the altered policy which that great statesman had been compelled, by conviction, to adopt. In 1846 he supported the commercial and financial reforms introduced by Sir Robert Peel, as the precursors of the repeal of the corn laws. When Mr. Cobden moved for a select committee on the bread tax, the premier selected Mr. Herbert to unfold his views of commercial legis-

lation. During the existence of the government of Lord John Russell and Lord Derby, Mr Herbert remained in opposition, but joined the ministry of Lord Aberdeen as secretary at war. This position was held by him until the reconstruction of the cabinet, consequent upon the retirement of the duke of Newcastle. For a few weeks he held the secretaryship of the colonies, under the administration of Lord Palmerston, but retired on the appointment of the committee of inquiry into the state of the army before Sebastopol. But though relinquishing, from feelings of honour, the position he held under Lord Palmerston, because of the censure he supposed implied in that appointment upon the government of Aberdeen, no member of the House of Commons has given greater attention to army reform. Some of the ablest papers upon the question that have appeared in the reviews of the day, have proceeded from his pen. Mr. Herbert is not only an able statesman; he is also a singularly benevolent man. Much of his time and talent are devoted to the prosecution of schemes of social amelioration. He is also a munificent patron of the arts. Near his seat at Salisbury, he erected, in 1843, a church, said to be the finest specimen of the Romanesque and Lombardic style that exists in England. In 1846 Mr. Herbert married a daughter of General a Court, a lady ever deserving honourable mention for her devoted exertions on behalf of the sick and wounded Crimean heroes.

HERSCHEL, Sir John Frederick William, Bart., only son of Sir William Herschel, was born at Slough, near Windsor, in the year 1790, educated at St. John's College, Cambridge, where he distinguished himself by his high mathematical genius and a passionate devotion to physical science. In 1813 he graduated B.A., and was senior wrangler and Smith's prize man. From this period until the death of his father, in 1822, he was occupied chiefly in mathematical studies and researches in theoretical physics. His first work was a 'Collection of Examples of the Application of the Calculus to Finite Differences,' published at Cambridge, in 1820. On the death of his father he devoted himself to the continuance of that great work of astronomical investigation around which his illustrious parent had shed so much renown. In 1825 he began an independent series of investigations of the sidereal heavens. This task occupied him for fully eight years, and involved results more extensive than had been originally contemplated. As regards nebulæ and clusters of stars, a record of 2,306 observations was laid before the Royal Society, together with somewhere between three and four thousand observations upon double stars. Results so important, and labours so systematic, at once fixed Herschel's place as the worthy successor of his father. The Royal Astronomical Society voted him a gold medal for his eminent services to science. In addition to the labours of this survey, he gave evidence of the versatility of his powers in various memoirs prepared for the society and published with its *Transactions*. In 1830 he contributed a treatise on Sound to the 'Encyclopædia Metropolitana;' and in the year following, a treatise on the 'Theory of Light' was furnished by him to the same work. Shortly, subsequent to these contributions, his 'Preliminary Discourse on the Study of Natural Philosophy' appeared. This last work exhibited its author as capable of sustaining a high reputation in didactic literature. In 1836 'A Treatise on Astronomy' proved Herschel's power as a popular expositor of that sublime science. He now resolved upon what has proved the greatest of his tasks as a practical astronomer, the survey of the southern hemisphere, hitherto all but utterly unknown to science. In the execution of this great design, he sailed for the Cape of Good Hope, taking with him his telescopes, and other necessary apparatus. The voyage proved singularly propitious. On the 15th January, 1834, he arrived at the Cape, with all his instruments in admirable condition. After some search, he selected a site for his improved observatory, about six miles from Table Bay, in a beautiful and shaded district of country. Here he set up his instruments. From March, 1834, until May, 1838, he continued his investigations; having, during these four years, swept the whole southern heavens. The scientific world in Europe and America waited with intense interest the results of the sublime labours of this solitary watcher. At distant intervals, this interest was gratified by glimpses of the progress that had been made. But not until 1847 were the complete results laid published in regular form. Herschel's residence at the Cape was beneficial, not only to astronomy, but also to meteorology. While there, he suggested a plan of simultaneous meteorological observations to be made at different places. This plan he subsequently developed in a formal publication. It was carried out under military authority in 1844. On Herschel's return to England, every honour was paid him. At the coronation of the Queen, he was made a baronet. Oxford created him a D.C.L. In 1850, when the office of master of the mint was converted from a ministerial into a permanent appointment, it was conferred upon him. Sir John held the appointment until failing health induced him to retire, when Professor Graham, the eminent chemist, was nominated. Sir John Herschel has ever taken the greatest interest in the diffusion of knowledge, occasionally lecturing to large mixed audiences, besides writing familiar treatises on scientific subjects.

HERZEN, Alexander, eminent Russian author, born at Moscow in 1816.

HILL, Rowland, secretary to the post office, and projector of the penny postage.

HIND, John Russell, eminent astronomer. Mr. Hind is the discoverer of a large number of planets. The gold medal of the Astronomical Society was awarded to him in 1852 for his eminent services to science, and a pension of £200 a-year was granted him by government for important astronomical discoveries.

HINTON, the Rev. J. Howard, M.A., minister of the Baptist congregation, Devonshire Square, Bishopsgate Street, is well known as an independent and original preacher, a voluntary in religion and education, and author of 'Memoirs of William Knibb,' 'History of the United States,' &c.

HOLMES, Oliver Wendell, M.D., born at Cambridge, Massachusetts, August 29, 1809, graduated at Harvard University in 1829, and

subsequently devoted himself to the study of law. In 1833 he visited Europe, and having resolved to exchange Coke and Blackstone for Galen and Esculapius, attended the hospitals of Paris for some two or three years. In 1835 he returned to Boston, took his medical degree at Cambridge in 1836, was elected professor of anatomy and physiology in Dartmouth College in 1838, and succeeded Dr. Warren in Harvard University in 1847. Two years after this appointment, Dr. Holmes relinquished general practice. The Doctor has been an extensive contributor to the medical literature of the United States, and is the author of a volume of excellent poetry, which has been republished in Britain by the Messrs. Routledge. Dr. Holmes is, according to the estimate of his countrymen, the most effective poet of the school of Pope that America has produced. His poem on the 'Burns Centenary' is incomparably the finest of the countless rhymes that celebration has called forth.

HOOK, THE REV. WALTER FARQUHAR, D.D., dean of Chichester and theological writer, is the son of the late Rev. Dr. James Hook; was educated at Winchester, from which he proceeded to Christ Church, Oxford, where he graduated in 1812. Untiring energy in the cause of church extension, and a zealous devotion to ecclesiastical literature, are the leading characteristics of this eminent divine. Dr. Hook belongs to the high church party in the English Church, but has so managed to temper zeal with discretion, that though not escaping considerable censure for his tendencies, he has been saved the humiliation to which certain of his Puseyite brethren have been subjected.

HOOKER, JOSEPH DALTON, eminent botanist, born in Glasgow in 1816. Having completed his medical studies and taken his degree, he accompanied Captain Ross on his expedition to the arctic regions, in the quality of naturalist in 1839 and 1843. The fruits of his researches were published in London under the title 'Flora Antarctic.' Since then, in the prosecution of his favourite study, Mr. Hooker has visited New Zealand, Tasmania, and the Himalaya. The results of these travels have been given to the world in a number of valuable volumes and a valuable atlas, containing illustrations of the Himalayan plants, &c.

HOUSTON, GENERAL SAMUEL, United States senator from Texas, was born in Rockbridge, county Virginia, March 2, 1793.

HOWITT, WILLIAM, novelist and descriptive writer, born 1795, at Heanor, in Derbyshire.

HOWITT, MRS. MARY, poet and novelist, born at Uttoxeter in the early part of the present century.

HUGO, VICTOR MARIE, Vicomte, an eminent French lyrical poet, dramatist, and romance writer, was born at Besançon, February 26, 1802, is the son of General Hugo, who assisted Augerean in dissolving the legislative body, on the 18th Fructidor. The early education of the future poet was acquired at home. In 1813 he went to an institution to be prepared for the Ecole polytechnique. While pursuing his studies at this college, he wrote a poem on a subject proposed by the French Academy, on the 'Advantages of Study,' which obtained honourable recognition of its merit. In the same year he wrote a tragedy, 'Irtamene,' modelled on the old classic school, and composed in verse. Three prizes carried off at the competitions of the academy won for him the title of master in that institution. In 1822 he established, with his two elder brothers, the *Conservateur Littéraire*, to which he contributed a large amount of poetry, and the romance of 'Bug-Jargal.' In 1823, the appearance of 'Odes et Ballades' placed him in the front rank of living French poets. The fall of Charles Tenth, and the agitation which followed the revolution of July, suddenly changed the opinions and style of the popular poet. Into the controversy now raised between the classical and romantic schools, Victor Hugo plunged with all the impetuosity of his nature. He became the head of the romantic school, which took to itself the name of Young France. Under the influence of the exaggerated sentiment of this school, he produced a variety of works, which are not likely to add much to his permanent reputation. At the age of thirty-nine, Victor Hugo became a member of the French Academy; and Louis Philippe created him a peer in 1845. After the dethronement of the citizen king in 1848, he was twice returned for the Assemblée National, as an extreme democrat. In December, 1852, he was exiled from France, and took up his residence in Jersey. From Jersey, he has, on more than one occasion, launched the lightning of his eloquence and scorn, both in prose and verse, against the present occupant of the French throne.

HUMBOLDT, FREDERICK HENRY ALEXANDER, Baron, the greatest of living naturalists, born at Berlin in 1769. He was educated for employment in the direction of the government mines, successively at Gottingen, Frankfort on the Oder, at Hamburgh, and at the mining school at Freiberg. In 1792 he was appointed assessor to the mining board, a post which, however, he subsequently exchanged for that of a director of the works at Bayreuth. In 1795 he abandoned these duties to devote himself to those pursuits in which he has since won so much renown. Having acquired considerable acquaintance with the different countries of Europe, he sailed for America in June, 1799, in company with Bonpland, where the travellers arrived, after a six weeks' voyage, near Cumana. After exploring the extensive territory which now forms the state of Venezuela, they crossed the steppes of Calobozo, and embarked on the Orinoco, proceeding to the extreme Spanish port, Fort St. Carlos, and returned to Cumana, after having travelled thousands of miles over a trackless wilderness. Having explored nearly all that was interesting in South America, Humboldt returned to Europe in 1804, and immediately commenced a series of colossal publications in nearly every department of science. In 1829 he explored Siberia and the Caspian Sea, travelling upwards of 2000 miles. The work by which Humboldt is best known in England is his 'Cosmos,' of which at least two eminent London publishers have given the British public translations. The groundwork of the book was a course of sixty-one lectures delivered in Berlin, in the winter of 1827, and the spring of 1828. Before giving these lectures in the Prussian capital, he had delivered a similar course in Paris. The work is addressed, to borrow the language of its illustrious author 'to

whomsoever his position permits sometimes to rise above the narrow boundaries of civic life, blushing that he has been so long a stranger to nature, and has passed by her without emotion, will find one of the noblest enjoyments which developed reason can afford to man in the contemplation of the great and unbounded life of nature.' Cosmos, as this appeal indicates, is meant to be an educational medium, to develop in the people an appreciation of nature. How fully it has accomplished this purpose, its great popularity in Germany, France, Britain, and America, amply testifies.

HUNT, JAMES HENRY LEIGH, was born at Southgate, in Middlesex, October 19, 1784; in common with his friends, Coleridge, Lamb, and Barnes, of the *Times*, Leigh Hunt was educated at Christ's Hospital, London. On leaving that institution, at the age of fifteen, he was for some time in the office of one of his brothers, who had become an attorney, and afterwards he held a situation in the war office. While in these employments, he contributed to various periodicals, writing more especially theatrical criticisms. These critiques were in a style altogether unique, possessing a more permanent interest than the mass of such criticism enjoys. A selection from them was published in 1807. In 1808 Mr. Hunt left the war office, to become, with a brother, joint editor and proprietor of the *Examiner* newspaper. While under the Hunt management, the *Examiner* was thrice subjected to government prosecution; twice was the journal acquitted; but on the third occasion, having been guilty of describing the Prince Regent as 'an Adonis of fifty,' the brothers Hunt were amerced in a penalty of £500, and two years' imprisonment. The well known story of 'Rimini' was one of the fruits of this prolonged exclusion from the living world. In 1822, Leigh Hunt joined Shelley and Byron in the editing of the *Liberal*, a journal which the two former had established. Shelley dying almost at the moment Hunt arrived in Italy, his relations with Byron soon became unsatisfactory. The *Liberal* was discontinued, and Hunt and Byron parted. In 1833, the first collected edition of Mr. Hunt's works was published. In 1847 he received a pension of £200, which he still enjoys.

HUNT, ROBERT, author, born September, 1807, at Devonport. Mr. Hunt is a self-made man. His best known works are 'Researches on Light,' 'The Poetry of Science,' 'Panthea; or, the Spirit of Nature,' 'Elementary Physics,' and a 'Manual of Photography.' To his labours the scientific world is chiefly indebted for a more perfect knowledge than was ever formerly possessed of the influences of light, heat, and actinism on the growth of plants. Mr. Hunt is now keeper of mining records in the Museum of Practical Geology, London.

HUNT, THORNTON, journalist, eldest son of Leigh Hunt, born Sept., 1810. Mr. Hunt was educated as a painter, but the studio, ill suited to his peculiar temperament, was soon abandoned for the more congenial field of literature and politics. Mr. Hunt, as a political writer, is liberal in the truest sense. Superior to party, he has ever devoted himself to the discussion of political questions in that broad and comprehensive spirit which alone befits the thinker. Mr. Hunt has been connected with some of the most important political organs, and has enjoyed the confidence of many of the most eminent men of our time. At present he is understood to be the conductor of the *Spectator*.

HUNT, WILLIAM HOLMAN, painter, born at London, 1827, a prominent pre-Raphaelite.

I

INGEMANN, BERNARD SEVERIN, a popular Danish poet and romance writer, born May, 1789.

INGLIS, JOHN, Lord Glencorse, Lord-Justice-Clerk of Scotland, born about 1810, is the son of the late Rev. Dr. Inglis, long an eminent leader in the Scottish Church. Educated at the high school and Edinburgh University, where he took the degree of A.M.; he was called to the bar in 1835. Almost immediately on his appearance at the bar he rose into fame, at once procuring an extensive practice. So unmistakable were his general powers, he could scarcely be said ever to have undergone the drudgery of a junior counsel; and for a long series of years he stood at the head of the Scottish bar. In consideration of his eminence, his brethren elected him Dean of Faculty. In 1852 he was appointed by the earl of Derby, Lord-Advocate of Scotland. He held this office of chief law adviser of the crown in the northern part of the kingdom, until the fall of the administration of the noble lord, but was unable to obtain a seat in parliament. When Lord Derby again came into power in 1858, Mr. Inglis was again appointed Lord-Advocate, a seat in parliament being found for him in Stamford. After a brief but highly successful career in the House of Commons, on the death of the Hon. John Hope Mr. Inglis was raised to the bench as Lord-Justice-Clerk, and assumed the title of Lord Glencorse.

INGRAM, HERBERT, M.P., proprietor of the *Illustrated London News*, was born in May, 1811, at Boston, Lincolnshire, a borough which he now represents in the House of Commons.

INGRES, JEAN DOMINIQUE AUGUSTE, a distinguished French painter, born at Montauban, in 1781.

IRVING, WASHINGTON, eminent American writer, born at New York, April, 1783. Irving's father, who was of Scottish extraction, died while he was yet young. Washington Irving's first literary efforts were made in the New York *Morning Chronicle*, in which he published 'Letters of Jonathan Old Style, Gent.' Subsequently to the publication of these letters, symptoms of pulmonary disease betrayed themselves, and it was resolved that the following year should be passed in the south of Europe. He accordingly sailed for Bordeaux, and travelled the south of France. In 1806, he returned to New York in renovated health, where he resumed the study of the law, and was admitted to the bar. In 1809, he published his 'Knickerbocker's History of New York.' At the close of the war in 1815, Mr. Irving resolved to visit England, but the ruin of the commercial house with which he was connected prevented for a time this second tour of Europe being accom-

plished. In 1818, however, he carried out his resolution, and continued to reside in Europe for seventeen years. While in England, he enjoyed the greatest consideration and popularity. Oxford conferred upon him a doctorate and a public dinner; and George the Fourth's fifty-guinea gold medal for eminence in historical composition was awarded him. In 1832 he returned to New York, greeted on all sides with the warmest enthusiasm. In 1848, having some time previously relinquished his official duties as minister at Madrid, he commenced a republication of his works, which have all been republished in this country, and are all highly popular. Washington Irving is unmarried. He was engaged in early youth to a lady of surpassing beauty, but she died, and her lover has never sought another bride.

ISABEL II., Maria Isabel Luisa, Queen of Spain, eldest daughter of Ferdinand VII., by his fourth wife Maria Christina, now wife of Don Fernando Munoz, duke of Rianzares, was born on 10th October, 1830, in the city of Madrid, succeeded to the Spanish throne on the death of her father, in 1833. The Cortes having set aside the Salic law in her favour, she was proclaimed queen of Spain on the 2d of October, 1833; and, in accordance with the will of Ferdinand, was placed under the guardianship of her mother during her minority. While Ferdinand lay dying, the Cortes, in obedience to a requisition from the prime minister, met at Madrid and took the oath of allegiance to the Infanta as rightful successor to the crown of Spain. The king's brother, Don Carlos, however, refused to take the oath, asserting his claim to the throne in default of a male heir. A civil war was the result of the assertion of this claim. After varied fortune Don Carlos was finally defeated, his party broken up, and himself compelled to quit the kingdom. For the vicissitudes of the Spanish government since the termination of that war, the reader may consult the biography of Espartero.

ISABEY, Eugene Louis Gabriel, an eminent marine painter, born at Paris on the 22d July, 1804.

J

JAMES, G. P. R., novelist, born in George street, Hanover square, London, about the beginning of the present century. His father's family was originally from Staffordshire; his mother was of Scottish extraction. Young James was educated by a French emigrant, who kept a school at Greenwich. About the age of fifteen he went to France. Mr. Washington Irving, having seen some of his earliest literary efforts, advised him to attempt something important. The novel of 'Richelieu' was the result of this encouragement. Published in 1828, it met at once with signal success. Since that time, Mr. James has been one of the most, if, indeed, he be not the most prolific of modern novelists. In 1852 he was appointed British consul at Richmond, Virginia, whither he removed soon after with his family. In 1858 he was appointed consul at Venice, where he now resides.

JAMESON, Mrs. Anna, eminent art critic. The connection of this lady with the literary world began about two years after her marriage, with Mr. Jameson, when the 'Diary of an Ennuée' appeared. Mrs. Jameson's next publication, 'Loves of the Poets,' contributed still further to enhance her fame. This work was followed by 'Lives of Celebrated Female Sovereigns,' and a year later by the 'Characteristics of Woman.' 'Winter Studies and Summer Rambles in Canada' was the result of a brief residence, which official duties had necessitated with her husband in Toronto. Two years afterwards 'Pictures of the Social Life of Germany' appeared. Since 1842, Mrs. Jameson, besides numerous efforts of lesser importance, has been engaged upon a great work illustrative of 'Sacred and Legendary Art.' This work consists of three parts; the first was published in 1848, the second in 1850, and the third in 1852. Subsequently, her 'Common Place-book of Thoughts, Memoirs, and Fancies' has been published.

JANIN, Jules Gabriel, a popular French critic, was born at St. Etienne, in the department of the Loire, in December, 1804. Janin was one of the founders of the 'Revue de Paris.' His writings are, all of them, remarkable for polish of style.

JASMIN, Jacques, a popular poet of Gascony, was born at Agen, department of the Lot-et-Garonne, March 6, 1798. Jasmin's ancestors were of the poorest peasantry of France; his early education was in consequence particularly circumscribed. While yet a youth he began to practise as a barber and hairdresser, a calling in which, despite his success as a poet, he has ever since continued. Jasmin's songs are all of them written in the patois of the peasantry—a kind of cross between the French and Spanish—more nearly akin to the language of the ancient troubadour than any now spoken. Jasmin, like those wandering minstrels of other days, is in the habit of reciting his poems in public. His expressive countenance, and earnest action, are peculiarly suited to produce a powerful impression upon his auditors, who not seldom assemble in thousands to listen to his lays. When Jasmin first took to song-writing, his wife, with that keen eye to merely material interests most women possess, imagining the poet might spoil the barber, frowned upon the efforts of her husband, but afterwards when the sale of his poems had furnished them with the means of purchasing the house in which he follows his trade, the good woman would choose him the best pen and the best paper, saying, as she laid it before him, 'Jasmin, every verse you write puts a new tile on the house.'

JELLACHICH, Joseph Baron Von, ban of Croatia, born October 16, 1801.

JOHNSTON, Alexander Keith, was born at Kirkhill, in the county of Midlothian, Scotland, December 24, 1804; educated at the high school of Edinburgh. His studies were at first directed to medicine, but a predilection for the fine arts led to his being apprenticed to Lizars, the eminent engraver. Geography and its allied branches had long been his favourite study. The passion for eminence grew upon him. To reach the higher sources of information, he mastered successively

French, Italian, and Spanish. His first work of importance, the 'National Atlas,' projected in 1835, was published in 1843, when he was elected a fellow of the Royal Geographical Society, and appointed geographer to the Queen. The writings of Humboldt, and kindred spirits, had so inspired him with the importance of the study of natural science, as to induce him to project an atlas of 'Physical Geography,' on a scale hitherto unattempted. On the appearance of this work the geographical societies of the continental capitals at once elected him an honorary member of their associations, and the leading scientific organs hailed the 'Physical Atlas' as a magnificent monument of the scientific genius of the nineteenth century. Mr. Johnston's next great work was the production of a 'Dictionary of Geography,' published in 1851. A new edition of this admirable compend, almost wholly re-written, appeared in 1855.

K

KANE, Sir Robert, M.D., president of Queen's College, Cork, eminent chemical writer, born in Dublin, in 1810.

KAULBACH, Wilhelm, director of the Academy of Art at Munich, born 15th October, 1805, at Arolsen, in Waldeck.

KAY-SHUTTLEWORTH, Sir James Phillips, was born July 20, 1804. After receiving his early education at Scotch and foreign universities, he took his degree as doctor of laws. He entered the public service at an early age, and when the committee of the privy council on education was nominated, Dr. Kay was appointed secretary to that body. In this capacity he has laboured for many years. The value of his educational zeal has been the theme of conflicting opinions,—a certain section of the community viewing it favourably, and another deeming its tendency likely to strengthen the bureaucratic element that has for some time been gradually creeping into the administration of the state. In 1850 Dr. Kay relinquished his connection with the educational committee of the privy council, and was rewarded with a baronetcy for his labours. In 1842 he married Janet, only daughter of the late Robert Shuttleworth, Esq., whose name he then assumed by royal license.

KEAN, Charles, only surviving son of Edmund Kean, was born at Waterford, Ireland, in 1811, educated at Eton. Much against the wishes of his father he adopted acting as a profession. Well received in the provinces, his London success was long but moderate. In 1842 he married Miss Ellen Tree, and since that time they have acted in concert. In 1850, Mr. Kean became the lessee of the Princess's Theatre, London; and the London performances of himself and his wife have consequently been confined to that place of entertainment. Mr. Kean's early ambition was to emulate his father's fame in his father's characters. Certain drawbacks of person and voice have prevented him from wholly realizing this lofty aim, but to a large extent he has been successful.

KEBLE, the Rev. John, M.A., vicar of Hursley, author of the 'Christian Year,' born 1800.

KELLY, Sir Fitzroy, lawyer and politician, son of the late Captain Hawke Kelly, of the royal navy, was born in 1796. Having studied at Lincoln's-Inn, he was in 1824 called to the bar. His great talents speedily rendered him conspicuous. In 1835 he was made a king's counsel, and elected a bencher of Lincoln's-Inn. Shortly subsequent he was elected member for Ipswich. In 1843 he was returned for Cambridge, and continued to represent that borough until 1847. During the administration of Sir Robert Peel he held the office of solicitor-general, and was honoured with knighthood.

KINGLAKE, Alexander William, barrister, author of 'Eothen,' born in 1802. His education commenced in his native place, Taunton, and subsequently prosecuted at Ottery, St. Mary, was completed at Eton and Trinity College, Cambridge. Having taken his degrees he entered as a student in Lincoln's-Inn, and was called to the bar in 1837. Soon afterwards Mr. Kinglake undertook an extensive tour in the East, of which he sent home to friends in England a series of graphic descriptions. On his return he was solicited to revise these communications for the press. He did so, though with some reluctance, but could find no publisher. Discouraged by this ill success, Mr. Kinglake threw his manuscript aside, and it remained unheeded for years. Ultimately, a casual circumstance brought him into contact with Mr. Olliver, in Pall-Mall; the manuscript was mentioned; Mr. Olliver undertook its publication. The work took; reviewers and readers were alike enchanted; it passed rapidly through numerous editions in England; was translated into nearly all the languages of the continent, and sold by hundreds of thousands in America. In 1857 Mr. Kinglake was returned to the House of Commons as member for Bridgewater. He is at present engaged upon a 'History of the Crimean War.'

KINGSLEY, the Rev. Charles, rector of Eversley, Hants, was born at Holne vicarage, near Dartmore, Devonshire, June, 1819. He was educated at home until the age of fourteen, when he became a pupil of the Rev. Derwent Coleridge, and subsequently a student at King's College, London, whence he removed to Magdalene College, Cambridge, attaining distinguished honours in that ancient university. Mr. Kingsley originally contemplated studying for the law, but after devoting some time to preparation for that profession, he became a clergyman. Eversley, a moorland parish in Hampshire, was his first cure, and the living becoming vacant after he had been curate about a year and-a-half, he was presented to it by the patron, the late Sir John Cope, Bart. As a clergyman, Mr. Kingsley is known to the working classes as the 'Chartist Parson.' To the literary world he is known as one of the boldest and ablest of the writers of our time. In conjunction with the Rev. F. D. Maurice, and some kindred spirits, he has largely interested himself in what Carlyle has called the condition-of-England question. He has subscribed to associations where the workman may carry on his labour unvexed by the avarice of capital, and where, so far as material comfort goes, a social millennium may be achieved. Mr. Kingsley's prin-

cipal works are 'Saints' Tragedy,' 'Alton Locke,' 'Westward, Ho!' 'Hypatia,' 'Two Years Ago,' 'Glaucus,' 'Alexandria and her Schools,' 'Phæthon,' and several volumes of sermons.

KINKEL, GOTTEFRIED, formerly professor of history, the fine arts, and modern literature in the university of Bonn, born in 1815, at Obercassel, a village of Rhenish Prussia. The revolution of 1848 withdrew Kinkel from retirement of study into the bustle of public life; as a democrat, he gave great offence to the court party in Prussia, and was more than once imprisoned for the freedom of his opinions. In 1850 he made his escape from the fortress of Spandau, and landed at Edinburgh, ultimately fixing his residence in London. Dr. Kinkel has supported himself as a lecturer on sculpture and painting.

KINNAIRD, GEORGE WILLIAM FOX, Lord Kinnaird, born 1807.

KISS, AUGUSTE, Prussian sculptor, born 1802.

KISSELEFF, PAUL DMITREVITCH, Russian general and diplomatist, born at Moscow, 1788.

KLAPKA, GENERAL GEORGE, was born April 7, 1820, at Temesvar, in southern Hungary, where his father was a burgomaster. In 1838 he entered the army, and in 1842 was appointed a sub-lieutenant in the Hungarian regiment of guards, and during five years pursued his military studies at Vienna. At the commencement of the Hungarian revolution he offered his sword to the Hungarian Diet. His services were accepted. Throughout the whole of the revolutionary conflict, he displayed the greatest skill and intrepidity, specially distinguishing himself by his defence of Comorn. On the fall of the patriotic party in Hungary, General Klapka having obtained honourable conditions for himself and the garrison, surrendered the fortress and betook himself to England. In 1850 he published 'Memoirs of the War of Independence in Hungary.' Klapka now resides at Geneva.

KMETY, GENERAL GEORGE, was born in 1810, at Pokoragy, a village near Rima-Szombath, in the Goemoez county, Hungary, where his father was a protestant clergyman. Kmety was at first intended for the church, and had contested successfully a scholarship in a German university, but in consequence of an error of a clerk, the reward was bestowed upon another. This disappointment so chagrined the youth that he entered the army at Vienna. His advancement in the Austrian army was rapid. In 1848 he had become a commissioned officer. In that year he returned to his native country, and took part in its patriotic struggles. On the fall of Kossuth, Kmety sought refuge in Turkey, and becoming a Mussulman, assumed the name of Ismail Pasha. His heroism and generalship at Kars made the fortune of General Williams, who, meanly enough, sought to appropriate to himself the glory of a defence, whose most brilliant episodes were due to the genius of the gallant Hungarian.

KNIGHT, CHARLES, publisher and author, born at Windsor, 1790.

KNOWLES, JAMES SHERIDAN, dramatist and author, born at Cork in 1794, where his father was a teacher. About the year 1792 the elder Knowles removed from Cork, taking with him his son James, then about eight years of age. Four years later we find the passion for the drama has already given a bent to the mind of the youth, he having then written a play for a company of juvenile actors, of which he was himself the chief. At the age of fourteen he wrote the ballad of the 'Welsh Harper,' his first published adventure in literature. Shortly subsequent to this he got introduced to Mr. Hazlitt, of whom he ever afterwards has continued to speak as his mental sire, taking a special pleasure in recounting the acts of kindness experienced from him. Through Hazlitt, young Knowles made the acquaintance of the reading literary celebrities of the metropolis. After residing in London for about fourteen years, he exchanged the English for the Irish metropolis as his residence; and in Dublin it was that his *début* as an actor was made. The success of the effort was not very promising, and for a time the stage was abandoned. Some years afterwards, having repaired to Belfast seeking employment in its theatre, he was induced to open an academy as a teacher of elocution and grammar. It was while thus employed that most of those dramas were composed on which his fame is built. About ten years ago a pension of £200 was conferred upon the dramatist, and he has since been appointed curator of the house of Shakspeare. Latterly Mr. Knowles has turned from the stage to theology and the pulpit.

KOSSUTH, LOUIS, was born 27th April, 1802, at Monok, in the county of Zemplen, in northern Hungary. He is the only son of Andreas Kossuth, a small proprietor belonging to the class of Hungarian nobles. Louis Kossuth was educated at the Protestant College of Scharaschpatack. In 1819 he began a course of legal studies, and attended the court of Eperus and the royal court at Pesth. His legal education completed in 1822, he returned to Monok, was appointed attorney to the county, and speedily obtained good practice as an advocate. In 1831 he removed to Pesth, and in 1832, as the representative of a magnate, attended the sittings of the Hungarian Diet, possessing the right to speak, but not to vote. While in this capacity he wrote reports of the proceedings of the Diet, and circulated them in manuscript. The great success of this novel mode of imparting political information to the people induced Kossuth to set up a lithographic press. This act first brought him into hostility with the Austrian government; Austria objected to the publication of the reports, and Kossuth was ordered to discontinue his printing. In obedience to this decision the lithographic press was laid aside, but Kossuth still continued to circulate his manuscripts. In 1836 some young men, accused of political conspiracy, were arrested and imprisoned; Kossuth deeming the young men innocent, denounced their arrest and incarceration as illegal. For this interference he was himself arrested, tried, found guilty, and placed in solitary confinement at Buda, without books or writing materials, for a space of three years. In 1840 the Hungarian Diet having met for despatch of business, had its attention directed to the case of Kossuth, and so general was the impression of the injustice of his imprisonment, it refused to grant the necessary supplies until he was set at liberty. Austria, always a needy empire, was compelled to capitulate, and

Kossuth was liberated a year before the expiry of his term of imprisonment. Some six months after his release from prison the first number of the *Pesti Hirlap* appeared. At first this journal was published four times a-week, but in a short while it became a daily paper, attaining a large circulation. Kossuth was editor in chief. The staff of contributors numbered among its names some of the most eminent Hungarians. On the 10th January, 1841, he married Teresa Meszlenyi. The widely-extended circulation and liberal principles of the Pesth journal alarmed the Austrian government, nor was the alarm the least allayed when Kossuth was elected by the county of Pesth as its representative in the Diet. The liberal opposition, headed by Count Louis Batthyany, was already all-powerful, when the revolution of Paris quickened into even more than wonted activity the progressive movement of Hungary. On the 3d of March, 1848, a proposition, submitted to the Diet by Kossuth, had just been carried. In obedience to the will of the Diet, and in conformity with his own proposition, Kossuth proceeded as a deputy to Vienna to solicit from the king of Hungary some necessary reforms. On the 15th March Kossuth entered Vienna, just two days after the high priest of modern diplomacy, Prince Metternich, had fled. On the 16th March the emperor received the deputation, and on the 17th caused a decree sanctioning the establishment of a new ministry, with Count Batthyany as president, and Kossuth minister of finance. Within a week of this change of ministry serfdom was abolished in Hungary. The benefits of this law were not confined to Hungarians proper, Croatia shared its advantages in an equal degree; and for a time seemed equally gladdened by the change. Unfortunately, however, Austrian agents were but too successful in persuading Croatia that Hungary meant to extinguish its nationality, and destroy its religion. The result was an insurrectionary movement among the Croats. This movement took place at a time when the greater portion of the Hungarian army was combating for Austria in Italy. Kossuth displayed the greatest resources in the emergency: money and troops were speedily forthcoming to defend the fatherland; ten battalions of honveds were immediately raised to resist the invader. On the 9th of September, 1848, Jellachich, the ban of Croatia, invaded Hungary with 30,000 men. The ban was opposed and defeated by Guyon. Towards the close of October the Hungarian army crossed the Austrian frontier and advanced upon Vienna, but received a severe check. Prince Windischgratz now in turn invaded Hungary at the head of an Austrian army. The Austrians were defeated in a series of engagements in which the valour of Hungary shone conspicuous. On the 14th April, 1849, the Hungarian parliament proclaimed the independence of Hungary, and the deposition of the house of Hapsburg Lorraine. On the declaration of this deposition Kossuth was appointed governor of Hungary. Only a few weeks elapsed from the declaration of independence when a Russian army was seen descending through the passes of the Carpathians, on the plains of Hungary. While the commander of the legions of the czar is pursuing the army of Gorgei, the battle of Temisvar, so fatal to the prestige of Hungary, has been fought; on the news of the disaster reaching Kossuth, he resigned his office and his powers to Gorgei, and within two days afterwards, on the 14th of August, 1849, the commander-in-chief of the Hungarian army surrendered unconditionally to Russia, Kossuth passing into Turkey. After residing at Widdin and Schumla for some time, he retired to Kutaya, and mastered in his solitude the tongue of Shakspere. By the intervention of the English and American governments the ex-governor was set at liberty in August, 1851; and on the 17th October he landed at Southampton, and was received with the utmost enthusiasm. After appearing in the chief towns of England and Scotland he visited the United States. Since his return from America he has resided chiefly in London, visiting Scotland periodically on a lecturing tour. As a lecturer, he has attained eminent success.

KUGLER, FRANZ THEODORE, professor of the history of art in the Royal Academy, Berlin, was born on the 9th January, 1808, at Stettin, in Pomerania.

L

LAMARTINE, ALPHONSE DE, poet, historian, and politician, born at Macon, in 1790. His father was an officer of cavalry, under the Bourbons; and his mother was a daughter of Madame des Roys, a governess in the Orleans family. Having passed his childhood at Milly, Lamartine was sent to the college of the Péres de la Foi. On leaving this seminary, he made a short tour in Italy, and repaired to Paris, during the first days of the empire. On the fall of the empire he offered his services to the restored Bourbons, and entered the gardes du corps; but after the hundred days he quitted the army. In 1818, he again visited Italy; and, in 1820, he published his 'Meditations Poetiques,' which circulated to the number of 45,000 copies. This distinguished success, the most brilliant of its day, opened a diplomatic career for the poet, who now became *attaché* to the embassy of Florence. In 1825, he was appointed secretary to the embassy in London; in London he married an English lady of fortune. The death of an opulent uncle, who bequeathed to him his wealth, placed the poet in possession of ample resources. Returning from London to Florence, Lamartine there composed his 'Harmonies Poetiques.' On the eve of the revolution of 1830 he was appointed minister plenipotentiary to Greece; and on the ascent of Louis Philippe to the French throne, the citizen king offered to confirm the appointment, but the honour was declined by the poet. Leaving politics, Lamartine betook himself to a pilgrimage to the East. At Beyrout he lost his eldest daughter. Leaving Madame De Lamartine at Beyrout, he travelled through Syria and the Holy Land, and was at Jerusalem when he received the intelligence that he had been elected a deputy of the French chamber. The poet accordingly returned to France. His success as an orator was equal to his poetic fame. For a time he supported the conservatism of Guizot, but ultimately gave his

travelled a few months upon the continent, he returned to England, and upon attaining his majority was returned to parliament, through his father's influence, for the borough of Calne, in Wiltshire. His reputation as a parliamentary debater was first established by his appearances in the case of Lord Melville. The claims of party and private friendship compelled Pitt to throw his broad shield over the misdeeds of Melville. With great earnestness the premier defended his colleague from the charge of official corruption. The honourable nature of Lord Henry Petty revolted from even the suspicion of political dishonesty or private peculation, and the strain of indignant remonstrance and high-toned severity in which he demolished Pitt's defence, awed even political opponents, while it was the admiration of political friends. Within a year of this memorable scene, William Pitt had gone where the 'wicked cease from troubling, and the weary are at rest.' The party he had so long led, broken by the death of its chief, the whigs came into office, and Lord Henry Petty was made chancellor of the exchequer, in the Granville and Fox administration. The duration of the Granville ministry was too brief to test his abilities as a financier; it was, however, long enough to satisfy the nation he was a statesman of superior promise. During the lengthened period that elapsed before he again had any connection with an administration, the name of the marquis of Lansdowne is found associated with all the leading measures of the liberal party. After eighteen years of exclusion from office, Lord Lansdowne became secretary of state for the home department, under George Canning. He also held the seals of the foreign office, under the short-lived administration of his successor, the late earl of Ripon. In 1831 Lord Lansdowne again took office under Earl Grey, as president of the council, and took an active part in the passing of the Reform Bill. Under the ministry of Lord Melbourne he continued to hold the presidency of the council until the retirement of that nobleman in 1841. In 1846 he resumed office under Lord John Russell. He resigned with Lord John in 1852. Under Aberdeen and Palmerston he held a seat in the cabinet without office. The noble lord is now regarded as the Nestor of the upper house.

LATHAM, Robert Gordon, eminent philologer and ethnologist, born in Billinsborough, County of Lincoln, in 1812, educated at King's College, Cambridge, graduated in 1833 as a B.A. Subsequently he obtained a fellowship, took the degree of M.D., and set out upon a tour to the north of Europe, bent on enlarging his linguistic acquirements, already known as remarkable. Shortly after the establishment of University College, London, he was appointed professor of English literature; this appointment resulted in the production of a series of works, which have placed him at the head of the philosophical investigators of our native tongue.

LAUDER, Robert Scott, R.S.A., painter, born near Edinburgh, 1803.

LAYARD, Austen Henry, traveller and author, born at Paris, 1817; distinguished by his researches amidst the ruins of Nineveh. Mr. Layard belongs to one of those families of French protestants, whom the revocation of the edict of Nantes drove from their fatherland. The traveller was originally destined for the law, and entered upon its studies, but soon forsook them for more congenial pursuits. In 1839, excited by a speech of O'Connell, he set out with a friend on a course of travel in northern Europe. Subsequently he passed through Albania and Rommelia to Constantinople. In Constantinople he became the correspondent of a London daily newspaper. Leaving the capital of the sultan, Mr. Layard travelled various parts of Asia, learning the languages of Persia and Arabia. It was after a pilgrimage of this kind that Mr. Layard returning to Constantinople, fired with the hopes which the discoveries of Botta had kindled, laid before the British ambassador his views of the exploration of Nimroud. Sir Stratford Canning entered at once with the greatest heartiness into those views, and placed his resources at his disposal, with what brilliant results is known to Europe. In 1852 Mr. Layard was returned to parliament for the borough of Aylesbury, and was appointed under secretary of state for foreign affairs. In 1854 he proceeded to the East as a spectator of the Crimean conflict. In the general election of 1857 Mr. Layard lost his seat in parliament; since then he has visited the seat of the Indian revolt.

LEDRU-ROLLIN, Alexander Auguste, advocate, jurisconsult, and politician, was born at Paris, on 2d February, 1808. His family name was Ledru, that of Rollin being assumed when he was called to the bar. Young Ledru had the advantage of a good general education before he devoted himself to special legal studies. Having qualified himself for the bar, he was received as advocate in 1832, just before the memorable riots of that year had broken out. In 1833 he published a pamphlet upon the illegality of the state of siege to which Paris was then reduced. This production at once placed him in the front of the extreme liberal party. In the following year insurrection burst forth in Paris, in Lyons, and other cities of France. This outbreak was made the subject of a second pamphlet, written in that style of declamation and apostrophe to which Frenchmen are so peculiarly passionate. Shortly after this he married an Irish lady, who, it is understood, brought a considerable addition to his own large fortune. From 1832 to 1848 few advocates were so often retained to defend political principles. Ledru-Rollin was, in point of fact, during that time, the Erskine of the French bar. Some of the more notable of his defences are much admired by his countrymen of all classes, for the splendour of their eloquence. In 1841 Ledru-Rollin was elected a member of the chamber of deputies. In 1847 he became one of the most conspicuous agitators against the government of Louis Philippe. At the famous banquet de Lille, when most of the leaders of his party shrunk from the crisis they had themselves precipitated, he took the chair, omitted the king's health from the list of toasts, and denounced Guizot in a strain of the bitterest invective. At the revolution of 1848 he became minister of the interior in the provisional government. On the fall of that government he took his place in the assembly as before, among the extreme party. In 1849 he fled to England to escape the vengeance

of Louis Napoleon. In the following year, as a token of gratitude, he published a work on the decline of Britain.

LEECH, JOHN, eminent artist, born in London, 1816; the chief of the *Punch* staff.

LEMON, MARK, journalist, editor of *Punch*, born November, 1809.

LENNEP, JACOB VAN, the Walter Scott of Holland, was born at Amsterdam on the 25th of March, 1802.

LEPSIUS, CARL RICHARD, a distinguished writer, archæological and historical, born at Naumberg-on-the-Saal, in Prussian Saxony, in December, 1813.

LESLIE, CHARLES ROBERT, R.A., painter and author, born in London, 1794.

LEVER, C. JAMES, novelist, born at Dublin, in 1806. At an early age the future novelist was destined for the medical profession, and with that view studied first in his native country, and afterwards in France. His practice, especially during the period when cholera first made its appearance in Ireland, was eminently successful. Subsequently he was appointed physician to the embassy at Brussels. It was while occupying that position that 'Harry Lorrequer' was published; that dashing and brilliant work was soon followed by 'Charles O'Malley,' 'Jack Hinton,' 'Our Mess,' 'St. Patrick's Eve,' &c. In 1842 Mr. Lever took up his residence in Dublin, and for a time edited the *Dublin University Magazine*. In 1845 he returned to the continent, and has since chiefly resided at Florence.

LEVERRIER, URBAIN JEAN JOSEPH, was born at St. Leo, in the department of La Manche, in France, an eminent astronomer, discoverer of the planet Neptune, and successor of Arago, as astronomer to the Bureau des Longitudes.

LEWIS, SIR GEORGE CORNEWALL, Bart., M.P., was born in 1806; having received his early education at Eton, in 1824 he entered Christ Church, Oxford, where he graduated in 1828, taking the highest honour in classics, and a second class in the mathematical school. In 1831 he was called to the bar, but never practised. Having in some subordinate appointments exhibited great business capacity, he was, in 1839, appointed a poor-law commissioner, and held that post until 1847, when he became secretary to the board of control. In the following year he was appointed under secretary of state for the home department. In 1847 he was elected M.P. for Herefordshire. In 1855 he succeeded his father as representative of Radnorshire, and had only been a few weeks in parliament when he was made chancellor of the exchequer, an appointment which he held until the fall of the government of Lord Palmerston. Like Mr. Gladstone, Sir George is deeply versant with Greek and Roman literature. The profundity of his studies in this department first became known to the world by a translation of Muller's 'History and Antiquities of the Doric Race.' His fame was still further heightened by his 'Inquiry into the Credibility of Early Roman History;' 'The Use and Abuse of Political Terms,' and 'The Method of Observation and Reasoning in Politics' are also from his pen. In the spring of 1854 Sir G. C. Lewis succeeded the late Professor Empson as editor of the *Edinburgh Review*, but abandoned that office on becoming chancellor of the exchequer. In 1844 Sir George married a sister of the earl of Clarendon, the widow of Thomas Henry Lister, Esq., known to the republic of letters as the authoress of 'Sketches of the Contemporaries of Lord Chancellor Clarendon.'

LEWIS, GEORGE H., was born in London on the 18th April, 1817. Having received a superior education at various schools, he became a student of medicine. Abandoning the medical profession for literature, in 1838 and 1839 he resided in Germany, acquiring a knowledge of German life, literature, and language, having previously acquired French, Spanish, and Italian. Since 1839 Mr. Lewis has resided chiefly in London, and has been incessant in his literary labours, contributing to nearly all the important organs of opinion and of science. The leading reviews and leading newspapers have in turn been enriched by the labours of his pen. The more remarkable of his independent works are 'Biographical History of Philosophy,' written in a most attractive style, and exhibiting a profound and varied acquaintance with the history of human thought. The 'Life of Maximilien Robespierre,' and his 'Life of Goethe,' exhibit an admirable mastery of the craft of the biographer, with deep insight into character. The equal ease with which the politician and the philosopher are dealt with, indicate the surpassing versatility and power of the biographer. Mr. Lewis is now engaged upon a popular physiological work for the Messrs. Blackwood. Some very remarkable papers in the *Westminster Review*, on this topic, are understood to have emanated from his fertile pen. Luminous exposition and bold generalization are the characteristics of his composition. Mr. Lewis is the Macaulay of scientific writers, with a range of speculative power to which the popular historian does not aspire.

LEWIS, JOHN FREDERICK, president of the Society of Painters in Water Colours, born in London in July, 1805.

LIEBER, FRANCIS, an American political philosopher, born at Berlin in 1800; now professor of history and political economy at Columbia, So. Ca.

LIEBIG, BARON JUSTUS, one of the most eminent chemists of modern times, born at Darmstadt in 1803. His predilection for physics induced his father to remove him from the gymnasium at Darmstadt to Bonn, and subsequently to Erlangen. In 1822 he removed to Paris, where he continued his studies for about two years. It was in Paris that Liebig read his first paper on fulminic acid. After the lecture a grave looking gentleman stepped out from amidst the audience, and, going up to Liebig, conversed with him at once on his paper, and prospects. The unknown gentleman asked him to dine. Liebig, afraid to disclose his utter ignorance of the name of his kind interrogator, depended upon the porter for his address; much to his chagrin, the porter was as ignorant as himself; and the day of the dinner-party came, without the young chemist having discovered his host. Some days afterwards he was met by a chemist, who inquired why he had not been to Humboldt's, where a party had been invited, specially to meet him. Liebig immediately sent an apology to the illustrious man; and to Humboldt's influence was he indebted

for his speedy recognition in Paris. Since that recognition, his fame has gradually broadened, until, at the present moment, he occupies the first rank among the professors of chemical science. His principal works have been translated into English by the late Dr. Gregory, and by Dr. Lyon Playfair.

LINDSAY, ALEXANDER WILLIAM CRAWFORD, Lord, eldest son of the earl of Crawford and Balcarres, born 1812.

LIVINGSTON, THE REV. DR. DAVID, eminent African missionary and traveller, was born in 1817, in the village of Blantyre, Scotland. His father, a small tea dealer, by his kindness of manner and winning ways, made the heartstrings of his children twine around him as firmly as if he could have bestowed upon them every worldly advantage. He died in 1856; while his son was on his homeward journey, anticipating no greater pleasure than telling beneath the paternal roof-tree the story of his adventures. Dr. Livingston's recollections of his mother recall a picture often seen among the Scottish poor—that of the anxious housewife striving to make both ends meet. At the age of ten, young Livingston entered Blantyre factory as a 'piecer.' With part of his first week's wages he purchased Ruddiman's 'Rudiments of Latin.' The labour of the factory extended from six in the morning until eight at night; the Latin was learned at an evening school, and by dint of energy and perseverance the piecer lad had fully mastered the classical authors before he reached his sixteenth year. In addition to the classic novels, books of travel and scientific works were his special delight. On an exploratory tour in the vicinity of his native district, he entered a quarry to collect the shells found in the carboniferous limestone which crops out in High Blantyre and Cambuslang. Addressing this query to a quarryman, 'How ever did these shells come into these rocks?' 'When God made the rocks he made the shells in them,' was the damping reply. At the age of nineteen Livingston became a cotton-spinner. He had now resolved to devote himself to the work of a medical missionary. Having passed through the classical, medical, and theological curricula, Mr. Livingston was admitted a licentiate of the Faculty of Physicians and Surgeons, Glasgow, and was accepted by the London Missionary Society as one of its agents. China had been his contemplated sphere of labour, but the opium war closed that field of benevolent enterprise. Mr. Moffat was then in England urging the claims of Africa, and in 1840 Mr. Livingston embarked for that continent, reaching Cape Town after a voyage of three months. During sixteen years he laboured there with surpassing zeal and devotion. The story of these years is told with unadorned eloquence in that now well known work, his 'Missionary Travels.' For eight years he lived far in the interior with a Bechuana tribe, guiding them in the paths of industry, virtue, and Christianity. He discovered the magnificent lake Ngami, traced the course of the great river Zambesi, in Eastern Africa,—penetrated the interior of that continent to the 8° of southern latitude, 26° north of the Cape of Good Hope. Having superintended the publication of his 'Travels,' and received the most satisfactory and substantial testimonials of the esteem of his countrymen of all classes, from his old comrades in Blantyre mills, to the most accomplished savants of Britain, the intrepid traveller, provided by government with the necessary outfit, has gone forth on a fresh exploring expedition. Dr. Livingston is married to a daughter of Mr. Moffat. Their elder children have been left behind them to receive a British education.

LOCKE, JOSEPH, M.P., eminent civil engineer, was born at Attercliffe, near Sheffield, in 1805, educated at the grammar school at Barnsley, in Yorkshire. From thence he proceeded to Newcastle-on-Tyne, where, under the late George Stephenson, he studied his profession for a period of six years. In any record of the development of the railway system of England and of the continent, a chief place must be assigned to the genius and the industry of Mr. Locke. Mr. Locke was returned to parliament in 1847. He is a fellow of the Royal Society, and a vice-president of the Institution of Civil Engineers.

LONGFELLOW, HENRY WADSWORTH, American poet, born at Portland, Maine, February, 1807, and graduated with distinguished honours at Bowdoin College in 1825. Contemplating law as his future profession, he entered his father's office; but after spending some time acquiring the mysteries of the legal craft, he accepted the professorship of modern languages in Bowdoin College. The more fully to qualify him for the office, Longfellow visited Europe, travelling in France, Italy, Spain, Germany, Holland, and England. His European tour left a deep impression upon his mind, and has coloured the whole of his subsequent career. To its influence may be traced that eclectic rather than national character stamped upon his writings. Returning to America in 1829, he entered upon the duties of his professorate, and while discharging those duties he became a frequent contributor to the *North American Review*. The historian of the literature of Spain having resigned the professorship of modern languages in Harvard University, Mr. Longfellow was called upon to succeed him. Before entering upon his new duties, he again visited Europe, acquiring a knowledge of the Scandinavian tongue and literature. From 1836 Mr. Longfellow has held his professorship in Harvard University; and during the period that has intervened since then has he published the works by which he has become known to fame. No American poet has achieved the popularity of Longfellow. His works are found in all varieties of editions, from the hot-pressed superbly illustrated drawing-room edition to the shilling volume.

LOVER, SAMUEL, poet, novelist, and painter, born in Dublin about the beginning of this century, is one of the most popular of Irishmen. His father, a member of the stock exchange, was desirous of bringing his son up to commercial pursuits, and with that intention took him into his counting-house. Poetry, music, and painting, and not the price of stocks, were the darlings of his heart. At a public dinner given to Moore in Dublin, in 1818, Mr. Lover, who had received a ticket from one of the poet's friends, attended, and sung, in honour of the occasion, an appropriate song, of which both music and words were his own. The song was again and again encored, and drew from

Moore a magnificent speech, in acknowledgment of the compliment. So successful a *debut* introduced the painter and song-writer to the *elite* of the Irish metropolis. Commencing business as a miniature painter, he had the honour of painting some of the most distinguished men of the time. Mr. Lover's engagements as an artist did not, however, prevent him from paying court to the muses. He became an extensive contributor to magazine literature, and produced a series of songs, illustrative of the popular superstitions of his native country. In 1846 Mr. Lover visited America, and was received with marked favour by all classes of the citizens of the great republic. In 1848 he returned to England.

LOWELL, James Russell, American poet, born in Boston, 1819. At the age of twenty he graduated at Harvard University, and subsequently studied law, but never practised. His career as an author began early. Before leaving college he had published a poem,—crude enough, if judged apart from the circumstances under which it appeared,—but not altogether wanting in promise. In 1841 he published a volume of miscellaneous poems, and in 1844 a new and greatly superior edition appeared. Four years later Mr. Lowell published that collection of poetry which at once identified him with the anti-slavery and philanthropic school to which he is now attached.

LYELL, Sir Charles, eminent geologist, born at Forfar, in 1797. After receiving an education at Exeter College, Oxford, he was called to the bar, but occupied himself with the mysteries of geology, rather than the intricacies of law. In 1836 he was elected president of the Geological Society. In 1848 he received the honour of knighthood. As a geologist, Sir Charles Lyell has earned great honour by his diligent collection of facts, illustrative of the uniformity of the laws of nature throughout the pre-Adamite ages. His chief works are 'Principles of Geology,' 'Elements of Geology,' &c.

LYNDHURST, John Singleton Copley, Lord, ex-chancellor of England, born in Boston, 1772; a great orator and a great statesman. He was about two years old when brought to England by his father, and the education he received in his youth was from a private tutor. At the usual age he was entered a pensioner of Trinity College, of which he was soon afterwards elected scholar. In 1794 Mr. Copley divided the highest honours of the university with the late Dr. Butler, head master of Harrow school and dean of Peterborough. Subsequently he was elected a fellow of his college, and the appointment of travelling bachelor gave him an opportunity of visiting the United States of N. America. On his return to England he entered himself at the Temple, and after a diligent course of study he was called to the bar in 1797. Fortune did not instantaneously smile upon the youthful barrister. For a very considerable period he went the Midland circuit without gaining any great reputation. Time, however, enlarged his practice, and ultimately he obtained the leadership of the circuit. He was first brought publicly into notice by his defence of Watson and Thistlewood, tried for high treason in 1817. The address and ability displayed on this trial induced the tory party to cast their eyes upon Copley, and press him into their service. Before the close of the year he is employed as counsel for the crown, in another series of political prosecutions. In 1820 he took an active part in conducting the prosecution of Thistlewood for the Cato Street conspiracy. In 1824 he became attorney-general, and at the general election in 1826 was returned for Cambridge in conjunction with Lord Palmerston. In the same year he succeeded Lord Gifford in the rolls court. In 1827 he was offered, and accepted the chancellorship under Canning, being raised to the peerage as Baron Lyndhurst of Lyndhurst, county of Hants. In 1828 he supported the repeal of the test and corporation acts. Lord Lyndhurst retired from office in 1830, with the duke of Wellington. The whig successors of the duke appointed the chancellor to the office of chief baron of the exchequer. In this court his great and valuable qualities as a judge were first fully discovered. In 1841 Lord Lyndhurst again undertook the duties of chancellor. On the retirement of Sir Robert Peel in 1846, he again withdrew from public life, taking only a very occasional part in the debates of the upper house. When peace was concluded by Lord Clarendon in 1856, he denounced the policy of the whig minister as a practical capitulation on the part of England. Lord Lyndhurst was, and still is despite his great age, one of the most effective of parliamentary orators.

LYONS, Rear-Admiral Sir Edmund, born 1790; one of the bravest and most popular of England's sea kings.

M

MACAULAY, Thomas Babington, Baron of Rothley, was born at Rothley Temple, Leicestershire, in 1800. His father was Zachary Macaulay, well known in the early part of the present century as the coadjutor of Clarkson and Wilberforce, in their exertions against the slave trade. His grandfather was the Rev. John Macaulay, a Presbyterian minister in the Highlands of Scotland, and a descendant of the Macaulays of the island of Lewis. Thomas Babington Macaulay was educated at Trinity College, Cambridge. His career in that university was distinguished. In 1819 he gained the chancellor's medal for a poem entitled 'Pompeii.' In 1821 he gained the same honour for a poem entitled 'Evening;' in that same year he was elected to the Craven scholarship. In 1822 he graduated B.A., and having been elected a fellow, he graduated M.A. in 1825. In the following year was called to the bar by the benchers of Lincoln's Inn. Throughout his entire university career he was noted as an omnivorous devourer of literature,—fortunate in a memory almost miraculously retentive of words and things. His powers as a writer were early tested in Knight's *Quarterly Magazine*. In that periodical ballads quite equal to 'The Lays of Ancient Rome,' and highly promising essays, appeared. Even before his university curriculum had closed, Macaulay's fame as a writer had become pretty widely diffused; and in the same year in which he graduated, 1825, his essay on Milton appeared in the *Edinburgh*

Review. In 1830 Mr. Macaulay was returned to parliament for the borough of Calne. He now became secretary to the board of control for India; and in the debates on the introduction of the Reform Bill he bore a conspicuous part. Perhaps his greatest parliamentary effort is his reform speech, delivered in 1831. In December, 1832, Mr. Macaulay was returned for the first reformed parliament as member for Leeds, and retained his seat until 1834, his fame as an orator and politician the while steadily increasing. In 1834 a seat in the supreme council of Calcutta was offered and accepted by the member for Leeds. While in India, Mr. Macaulay's task was the preparation of a new code of law. To accomplish this work the more completely, he was exempted from all duty in connection with the executive government, and to facilitate his labours had four assistants assigned him. He was engaged upon this important task for nearly three years, and on its completion he returned to England in 1838. On the publication of this code, testimony was spontaneously borne on all sides to the high ability with which the work had been accomplished. Unfortunately, however, it was deemed too equitable a legal system for the varied races of Hindostan; and, in deference to native prejudices, its virtue has been allowed to remain untried. In January, 1840, Mr. Macaulay was elected member for Edinburgh, and re-entered political life not only as the representative of the Scottish metropolis, but also as secretary at war, a post which he held until Sir Robert Peel's advent to power in the autumn of 1841. When the combination of protectionists and whigs on the Irish coercion bill drove Sir Robert Peel from power in 1846, Mr. Macaulay returned to office as paymaster-general of the forces, under Lord John Russell. In the general election of the following year he lost his seat for Edinburgh, on the Maynooth question. A seat could easily have been found for him, but Mr. Macaulay refused to sit for any other constituency, and withdrew altogether from political life, consecrating his energies to historic studies. Mr. Macaulay's contributions to the *Edinburgh* closed with his essay on Chatham. In that paper he took farewell of essay writing, reserving his strength and his resources for more continuous exertions. In 1849 the fruits of this labour and devotion appeared in the publication of the first instalment of the 'History of England,' from the accession of James II. No historical work that we know of ever met so brilliant a reception. The most successful work of fiction could not have been more popular; pleasant as a novel, and exciting as a drama; minute, varied, luminous, there is hardly an English household which has not leant over and looked up from its pages with delight. Clear common sense, in a state of rhetorical effervescence, just sufficient to stimulate without startling, has constituted Macaulay emphatically the most readable of our grave writers. Shortly after the publication of the first volume of his 'History of England,' the historian was elected lord rector of the university of Glasgow. His inaugural address on his installation in this office, is one of the most magnificent of the many eminent addresses that have been given in that ancient seat of learning. In 1850 Mr. Macaulay was appointed professor of ancient history in the Royal Academy. In 1853 he received the Prussian order of merit; and repentant Edinburgh again returned him to parliament. In 1854 he published an edition of his speeches; and in the following year the third and fourth volumes of his 'History of England.' The furor created by these volumes was even greater than on the appearance of the earlier portion of the work. Shortly subsequent to their appearance Mr. Macaulay resigned his seat for Edinburgh, retiring to devote himself exclusively to the completion of the task he has assigned to himself, viz., "to write the history of England from the accession of James II., down to a time which is within the memory of men still living." As the work has as yet only reached 1697, it is manifest the author has the task of a life before him. It would be impossible, by even the most elaborate exposition, to give a better idea of the principle upon which it is written, than by quoting a couple of sentences from the brilliant historian:—'The best portraits are, perhaps, those in which there is a slight admixture of characture; and we are not certain that the best histories are not those in which a little of the exaggeration of fictitious narrative is judiciously employed. Something is lost in accuracy, but much is gained in effect. The fainter lines are neglected, but the great characteristic features are imprinted on the mind for ever.' Critics have insinuated that the historian often requires the full advantage of this license, in accounting for the extraordinary antithesis of eulogy and satire with which his work abounds—

> 'So over-violent or over-civil,
> That every man with him is God or devil.'

On the 10th September, 1857, Mr. Macaulay, in consideration of his eminent literary and political services, was created a peer of the realm, under the style and title of Baron Rothley.

MACDOWELL, PATRICK, R.A., sculptor, born at Belfast, 1799.

MACKAY, CHARLES, LL.D., poet and journalist, born at Perth, 1812, but early removed to London, where he received his education. In 1830 he removed to Brussels, and was there a witness of the events of the revolution which separated Belgium from Holland. In 1834, after the publication of a small volume of poems which attracted considerable attention, he became connected with the *Morning Chronicle*. In 1844 he succeeded the late Mr. Weir in the editorship of the now defunct *Glasgow Argus*, then a leading organ of liberal opinion in the commercial capital of Scotland. He held this position until 1847. In 1848 the university of Glasgow bestowed on him the degree of LL.D. It was during Dr. Mackay's residence in Scotland that some of the most popular of his poetical works were published. As a song-writer he has been highly successful. Recently, Dr. Mackay visited America on a lecturing tour. The results of his travels have just been given to the world. His impressions of the United States are not particularly flattering.

MACLAREN, CHARLES, journalist, and ex-editor of the *Scotsman* newspaper; eminent as a man of science, born 1785. Mr. Maclaren is what

is called a self-made man, distinguished through life for energy, ability, and modesty of character. In conjunction with the late Mr. William Ritchie he projected the *Scotsman* newspaper. The leading article of the first number was written by him; and for the first six months he conducted the paper unknown and unassisted. Under Mr. Maclaren's management, the *Scotsman* rose to the highest position in journalism; though, perhaps, as Lord Cockburn remarks, just a little heavy occasionally. To the praise of an able editor, Mr. Maclaren adds the merit of an accomplished geologist, and topographer. 'The Topography of Troy,' and 'The Geology of Fife and the Lothians,' bear testimony to his scientific attainments. Under the initials 'C. M.,' he still occasionally contributes papers, chiefly scientific, to the *Scotsman*.

MACLISE, DANIEL, painter, born at Cork 1811.

MACLURE, SIR ROBERT, Knt., born at Wexford, Jan., 1807, discoverer of the north-west passage.

MACREADY, WILLIAM CHARLES, tragedian, born in London, 1793.

M'CULLOCH, HORATIO, R.S.A., eminent landscape painter, born at Glasgow in 1806.

M'CULLOCH, J. R., political economist, born in Galloway, in Scotland, 1790, one of the early editors of the *Scotsman*.

M'NEILE, THE REV. HUGH, minister of St. Jude's, Liverpool, canon of Chester, born 1795, at Ballycastle, near Belfast. A popular clergyman, distinguished by his antipathy to Romanism.

M'NEILL, SIR JOHN, G.C.B., and F.R.S.E., third son of Sir John M'Neill of Colonsay, Argyllshire, eminent diplomatist, and president of the poor-law board, born 1795. Sir John came prominently before the British nation in consequence of the faithfulness of his report upon Crimean mismanagement. He entered the military service of the East India Company at an early age, and served for some time in their Bengal army. In 1831 he was appointed assistant envoy at the court of Persia; afterwards became secretary to the embassy; and from 1836 to 1844 was envoy extraordinary and minister plenipotentiary at that court. While thus employed, he gained an acquaintance with the policy and resources of those eastern nations which lie between Russia and our Indian frontiers, and predicted with surpassing accuracy the aggressive policy of the late emperor. On returning to Britain he was appointed president of the Scottish poor-law board; and in 1851 he conducted an inquiry into the condition of the Western Highlands and Islands of Scotland. The reputation gained in this inquiry led to his nomination, in conjunction with Colonel Tulloch, to conduct the Crimean investigation. For his services, Lord Palmerston, in deference to public and parliamentary opinion, nominated Sir John a member of the privy council.

MADDEN, SIR FREDERICK, an eminent antiquarian writer, and one of the principal officers of the British Museum, born at Portsmouth in 1801.

MADOZ, PASCAL, a distinguished Spanish statesman and author, born at Pampeluna, May, 1806. At the age of fourteen he entered upon the study of law at the university of Saragossa, and was there involved in the political troubles consequent upon the movements of the liberal party. The great literary work of his life is a 'Geographical, Statistical, and Historical Dictionary of Spain.' This work occupies sixteen closely printed quarto volumes. As a politician he is one of the most influential men in Spain; was minister of finance under O'Donnell, is recognized as a leader of the progressionists, and has several times been elected a member of the Cortes.

MANTEUFEL, BARON OTHO-THEODORE, Prussian minister of foreign affairs.

MANZONI, ALESSANDRO, eminent Italian novelist and poet, born at Milan, 1784. Manzoni was educated first at Milan and subsequently at Pavia. In 1803 he visited Paris, and there formed the acquaintance of the leading literary men. The work by which Manzoni has obtained a European reputation is his historical novel, '1 Promessi Sposi,' which has been translated into English under the title of 'The Betrothed Lovers.' This work, for vividness of descriptive power, discrimination and exhibition of character, is worthy of a place beside the best works of the author of 'Waverley.'

MARMORA, ALPHONSE DELLA, general of the Piedmontese auxiliary army of the East. Marmora distinguished himself greatly in the Crimean war.

MAROCHETTI, BARON, sculptor, born in 1809 at Turin.

MARSHALL, WILLIAM CALDER, R.A., sculptor, born at Edinburgh, 1813.

MARTINEAU, MISS HARRIET, is descended from a family of French extraction, expatriated by the edict of Nantes, which settled at Norwich, where for several generations they carried on the business of silk manufacturers. Harriet, the youngest of eight children, was born in Norwich in 1802. Her education, chiefly received beneath the paternal roof, was rather solid than showy. At a very early period she evinced a superior talent for composition; and on the embarrassment of her father's commercial affairs, the energy of her character developed itself. Resolved to be independent, she betook herself to needlework, until a literary path should open to her. In 1823 her earliest work appeared; and from that time until the present, Miss Martineau has ceaselessly devoted herself to literature. Travels, politics, history, and political economy, have been her favourite themes; on all of these she has written with the greatest perspicuity and power. Miss Martineau, it is understood, is a frequent contributor to the *Westminster Review*, and to the *Daily News*. Of late years she has avowed religious opinions in singular contrast with her early views. Beginning her literary career with a volume of 'Devotions for Young People,' she may almost be said to have closed it with accepting the philosophy of Comte, and the materialism of Mr. Atkinson.

MARTINEZ DE LA ROSA, FRANCISCO, a Spanish lyric and dramatic poet, historian, orator, and statesman, born at Granada, 1789.

MARTIUS, CARL FRIEDRICH PHILIP VON, a distinguished German botanist, born at Erlangen, 1794.

MASSEY, GERALD, poet, author of the ballad of the 'Babe Christabel,' born May, 1828, near Tring, in Herts.

MASSON, DAVID, professor of English language and literature at University College, London, born at Aberdeen in 1823. Educated at Marischal College, and subsequently at the university of Edinburgh; one of the most thoughtful and powerful literary men of the times. A volume of critical and biographical essays, and an elaborate life of Milton, are his chief independent contributions to literature.

MAURICE, FREDERICK DENISON, M.A., chaplain of Lincoln's Inn, and late professor of divinity in King's College, London, born in 1805, equally distinguished as a scholar and philanthropist. Mr. Maurice has been the soul of a social movement in behalf of the children of toil in the metropolis, which has proved eminently satisfactory. His theological opinions have recently been called in question, and, as a consequence, he has been obliged to vacate the professorial chair in King's College.

MAURY, MATTHEW F., astronomer and hydrographer, was born in Spottsylvania, county Virginia, in 1806. His work on the physical geography of the sea has obtained universal celebrity.

MAYHEW, HENRY, originator of *Punch* and author of 'London Labour and London Poor,' born in London, November, 1812.

MAZZINI, GUISEPPE (Joseph), leader of the Italian democrats, and ex-triumvir of the Roman republic, born at Genoa in 1809, where his father was an eminent medical practitioner. Mazzini was the only son of his parents, and was educated with great care. His educational studies completed, he chose the profession of the law, but a patriotic passion early turned him aside from legal studies. When Mazzini was just ripening into manhood, Italy had reached the nadir of its political degradation. Where not under Austrian rule, it groaned under native despotism, even still more hateful. Piedmont, of whose freedom so much is now spoken, then sat in the shadow of tyranny as abject as Neapolitan oppression. Nowhere, throughout the Sardinian states, was the discontent with this condition of things stronger than in Genoa, then only recently incorporated with the kingdom of Sardinia. In this crisis Mazzini established a literary journal in Genoa. On the suppression of that organ by the police, he removed to Leghorn, where a more liberal censorship enabled him to discuss at will his favourite topics, literature and politics. Here it was that Mazzini conceived the idea of the liberation of Italy by a universal secret association. Neapolitan carbonarism furnished the type of this organization. The French revolution of 1830 stimulated his enterprise; but a hint of the mischief that was brewing having been given to the Piedmontese government, Mazzini was arrested and imprisoned. Nothing very definite being found against him, he was shortly afterwards set at liberty, on the condition that he should leave Italy. Marseilles now became his head-quarters. The elements of a new organization were found among the refugees, and the journal *La Giovine Italia*, or, *Young Italy*, was established. The leading idea of this journal—'Italy One and Indivisible'—is an idea from which Mazzini has never swerved: nor has he ever scrupled to preach insurrection as the means by which this unity may be achieved. In 1833, chiefly through the agency of the Piedmontese government, this organization, which had spread itself over Italy, was again broken up, many of its chief agents being imprisoned and put to death. Mazzini, expelled from France at the instance of the Piedmontese ambassador, took refuge in Switzerland. Expelled from Switzerland, he took refuge in London, supporting himself in the metropolis by contributing to leading journals and reviews, English and foreign, and passing his evening hours in the teaching of the poor Italian organ boys, with which London abounds. After the revolution of 1848, the evacuation of Lombardy by the Christians and the concession of constitutions by the native Italian princes enabled the exile again to re-visit his native land. Charles Albert's unfortunate generalship, and the genius of Radetsky, once more established Austria in Italy. Mazzini went to Rome, and was there the soul of the defence of the Eternal City against the arms of France. On the fall of Rome he returned to England, where he has since resided.

MEISSONIER, JEAN LOUIS ERNEST, one of the most popular of French *genre* painters, born at Lyons, in 1813.

MELVILLE, THE REV. HENRY, B.D., president of Haileybury College, Herts, a preacher of singular eloquence and power, and an active member of the high church party in England.

MELVILLE, HERMAN, the author of 'Typee' and other works, was born in the city of New York, August 1, 1819.

MENCHIKOFF, PRINCE ALEXANDER SERGIUS, commander-in-chief of the Russian army during the Crimean struggle, born 1789.

MENZEL, WOLFGANG, eminent German critic, litterateur, and historian, born at Waldenborough in Silesia in 1798.

METTERNICH, CLEMENT WENCESLAS, Prince De, diplomatist, was born at Coblentz, on the 15th May, 1773. At the age of fifteen he entered the university of Strasburg, and after passing two years in that institution he completed his studies at Mainz. Subsequently he visited Holland and England; and on returning, towards the close of 1794, to his native country, he was attached to the Austrian embassy at the Hague. Metternich's first appearance as a diplomatist was at the congress of Rastadt. In 1801 he was appointed minister at Dresden. In 1803 and 1804 he took a prominent part in negotiating the treaty between Austria, Prussia, and Russia. In 1806 he went to Paris, and in the following year he signed the treaty of Fontainbleau. When France and Austria became involved in hostilities in 1809, Metternich was recalled to assume the functions of foreign secretary. It was during his tenure of this office that he conducted Napoleon's Austrian bride, the Archduchess Maria Louise, to Paris. At the conferences of Dresden and Prague he resolutely upheld the national cause. When the grand alliance against France was signed at Töplitz, in 1813, Count Metternich was raised to the dignity of a prince of the empire, as a reward for his eminent services. In the proceedings consequent upon the occupation of Paris, the prince

MINIE, C., inventor of the rifle which bears his name, born in Paris about 1810.

MINTO, GILBERT ELLIOT, second earl of. The eldest son of the first earl was born in 1782, and was educated in the diplomatic service. In 1806 he entered parliament, as member for Ashburton, and subsequently sat as member for Roxburgh. In 1814 his father's death elevated him to the House of Lords. In 1832 he became ambassador to Vienna. On his return to England he became first lord of the admiralty, under the administration of Lord Melbourne. In the administration of Lord John Russell he held the office of lord privy seal from 1846 to 1852. At the period of the revolution of 1848 he was sent on a special mission to Rome. Since that time the noble lord has not held any public appointment.

MITZ, FREDERICK AUGUSTE DE, founder of the reformatory of Mettray.

MODENA, FRANCIS FERDINAND GEMINIEN, duke of, born June 1, 1819, and married, March 30, 1842, the Princess Adelgonde, daughter of the ex-king Louis of Bavaria. His sister is married to the Count de Chambord, the legitimist pretender to the crown of France.

MOFFAT, ROBERT, eminent missionary agent of the London Missionary Society in South Africa, is a native of Inverkeithing, Scotland. In 1816 he was designated, in conjunction with the martyr of Erromanga (John Williams), to the work of that association. The earliest scene of Mr. Moffat's labours was first in Namaqua Land, where the terrible Africaner exercised his chieftainship. Subsequently he removed to the Bechuana country. In 1840 Mr. Moffat visited England, after an absence of nearly a quarter of a century. While in Britain he published a volume entitled 'Missionary Labours and Scenes in Southern Africa;' and also carried through the press a translation of the New Testament, and the Psalms in the Bechuana language. This work accomplished, Mr. Moffat returned to South Africa, where he still labours.

MONTALEMBERT, CHARLES FORBES, Count De, is descended from one of the most ancient families of Poitou. In 1819 his father was raised to the dignity of a peer of France, and was for some time minister of Charles X., at the court of Sweden. The minister of Charles married a Scotch lady of great ability and great energy of character. Of this union Charles, the eldest child, was born in April, 1810, and spent a considerable portion of his youth in Sweden. While yet only nineteen years of age, he published a lecture on Sweden, which brought him into intimacy with Guizot. While scarcely twenty-one, Count Montalembert joined Abbe Lacordaire in opening a free school for Roman Catholic children in Paris. The school was forcibly closed by the police. The ordinary tribunals not being competent to sit on the case, the matter was carried before the Chamber of Peers. The death of his father had just given the count a seat in that assembly, and before it he vindicated the cause of free education in a speech of remarkable ability and surpassing eloquence. This speech created a great sensation in the chamber, and the police were fined for their interference. Subsequent to this brilliant forensic display he gained a high reputation by his 'Life of St. Elizabeth of Hungary,' a work on 'Mediæval Art,' and his 'Life and Times of St. Anselm.' In 1847 Montalembert delivered that celebrated speech upon the affairs of Switzerland, in which he so distinctly foretold the revolution of the following year. After the revolution of 1848 the department of Doubs elected him a member of the National Assembly. Count Montalembert's name has been throughout identified with the defence of the interests of the Catholic Church. 'Catholic Interests in the Nineteenth Century,' and 'The Political Future of England,' are the works in which his predilections for Rome have been most conspicuously displayed. Count Montalembert approved of the *coup d'état*, and within certain limits supported the policy of the present emperor of France. But, having at length grown weary of the present *regime*, in an article contributed to the *Correspondant*, on the 'Indian Debate,' he, under cover of a eulogy of England, assailed the despotism of Napoleon in a strain of the most eloquent invective. For this article the count was put upon his trial, and being convicted, was fined and imprisoned. Pardoned by the emperor, he resented the injustice of the prosecution, appealed to a higher tribunal, and spurned the pardon of the sovereign. The appeal was partially successful. Louis Napoleon discovered he had committed a mistake, and again gladly tendered the count a remission of the mitigated sentence of the supreme court.

MONTI, RAFFAELLE, eminent sculptor, born at Milan, in 1818.

MORNY, COUNT DE, diplomatist and politician, born on the 23d of October, 1811. His mother, queen Hortense, the daughter of Josephine, and the mother of the present emperor of France. Having received a good education he entered upon a military career as sous-lieutenant in the 1st regiment of Francis. Subsequently he joined the French army in Africa, and took part in the expedition of Mascara and the siege of Constantine. When the fortunes of Louis Napoleon had reached their lowest ebb, Count de Morny still clung faithfully to his friend, and when at length Napoleon had become president of the republic, it was the count that was employed to transform the title of president into that of emperor, by the *coup d'état* of the 2d December, 1851. At the coronation of the present emperor of Russia, the count represented France at the court of St. Petersburg. While there his manner, it is said, was particularly fascinating. In addition to the excellent picture speculations into which, according to Sir Robert Peel, he is understood to have embarked while in Russia, the count got engaged to the Princess Troubetzkoi, one of the most beautiful ladies in Russia, whom he subsequently married. Count de Morny is president of the corps legislatif.

MORSE, SAMUEL FINLEY BREESE, one of the inventors of the electric telegraph, was born at Charlestown, Massachusetts, in 1791. His system of telegraphic communication is almost universal in America and on the continent.

MULLER, JOHANNES, the eminent German physiologist, was born on the 14th July, 1801, at Coblenz on the Rhine. He received his early education at the gymnasium of his native city. In 1819 he repaired to the university of Bonn for

the purpose of studying medicine. In 1823 he took his degree of doctor in medicine. In 1824 he obtained a prize for an essay on the 'Respiration of the Fœtus.' From Bonn he went to Berlin, where he extended the range of his studies by attending the lectures on geology and philosophy. In 1830 he was appointed professor of physiology and anatomy in Bonn, and in 1833 he was invited to Berlin to fill the chair vacated by Professor Rudolphi. Professor Muller enjoys the reputation of being the first physiologist in Europe.

MULREADY, WILLIAM, R.A., painter, born at Ennis, in Ireland, in 1786; one of the most eminent of the English school of artists.

MUNCH, ANDREAS, an uncle of the professor, is a Norwegian poet of some note, son of the bishop of Christiansand, was born 1811.

MUNCH, PETER ANDREAS, an ingenious and indefatigable Norwegian antiquary and philologist, born at Christiana, on the 15th December, 1810, now professor of history at the university of Christiana.

MURCHISON, SIR RODERICK IMPEY, D.C.L., one of the most distinguished of modern geologists, born at Farrodale, in Rosshire, 1792. He was educated at Durham grammar school, and at the Military College of Marlow; and received the honorary degree of M.A. from the universities of Cambridge and Durham. He was an officer in the army from 1807 to 1816, serving in Spain and Portugal, with the 36th foot; afterwards on the staff of his uncle, General Sir Alexander Mackenzie; and lastly, as a captain in the 6th dragoons. In 1831 Mr. Murchison applied himself to a systematic examination of the older sedimentary deposits in England and Wales; and after five years' labour, he succeeded in establishing the Silurian system. Mr. Murchison next traced this system through Norway, Sweden, and European Russia. In 1845 Mr. Murchison having completed his survey of Russia, the Emperor Nicholas presented him with the grand cross of the order of St. Stanislaus; and upon his return to England, he received the honour of knighthood. In 1844 Sir Roderick Murchison introduced a comparison between the rocks of eastern Australia and those of the Ural mountains, and from that comparison, was the first publicly to declare, as his opinion, that gold must exist in Australia. Sir Roderick Murchison, to great personal eminence, unites the most generous regard, and manifests the most prompt recognition of obscure worth. Not a few men of genius have been indebted to him for the frankness with which, when yet all unknown to fame, he proclaimed their merits. In 1855 Sir Roderick became director of the Museum of Practical Geology.

N

NAPIER, VICE-ADMIRAL SIR CHARLES, K.C.B., late commander of the Baltic fleet, born 1786, is the eldest son of the late Hon. Chas. Napier, of Merchiston hall. Nearly sixty years ago, Sir Charles entered the navy as a first-class volunteer. During that long period of service, he had always distinguished himself as a brave and dashing tar. Such was the prestige of his name, that, though no special favourite of any government, when the Russian war was about to be proclaimed, he was appointed to the command of the Baltic fleet. In that command, however, he was doomed to be an exampler of the signal folly into which the hero falls, who, when putting on his armour, boasts as those who are putting it off. The Baltic fleet was to take Cronstadt, but beyond the blockade and the affair of Bomarsund, nothing was done. Of course Sir Charles blamed the admiralty for not having furnished him with the fitting fighting tools; and there was no doubt that much of the blame of the resultless character of the expedition was due to official bungling. But, though no very brilliant deed was done in the Baltic by Sir Charles in the late war, his previous services confer sufficient renown. Egypt, Syria, Spain, have, each in turn, owned his powers. Not alone as a naval commander it is that Sir Charles is known; his pen is ever quite as vigorous as his sword. The innumerable caustic epistles he has issued from time to time, have rendered him a thorn in the side of nearly every administration during the last twenty years. On the death of Sir W. Molesworth, Sir Charles Napier was elected member for Southwark; and at the dissolutions in 1857 and 1859, was again returned to the House of Commons.

NAPIER, SIR WILLIAM, K.C.B., general and historian, born 1785, at Castleton, in Ireland, brother of the conqueror of Scinde.

NARVAEZ, DON RAMON, duke of Valencia, born in Andalusia, 1800. He took an early part in the war against Napoleon, and rose rapidly from rank to rank in the army. In the civil war of Spain he fought with distinction against the Carlists. At the close of the war in the Basque provinces, in 1840, he quarrelled with Espartero, and went over in consequence to the party of the Queen-regent Christina. The success of the insurrection in 1843 against Espartero, was mainly owing to the tactics of Narvaez. After the return of Queen Christina he was at the head of the Camarilla, until his ministry was overthrown in 1846. In the following year he was sent as ambassador to Paris; and there became conspicuous in the plots formed against Queen Isabella. In October, 1847, he became president of the council, a position he retained till January, 1851. Financial difficulties destroyed his ministry, and Narvaez went once more to Paris. When, in 1856, Marshal O'Donnell drove Espartero from office, Narvaez, perceiving that power was once again within his grasp, hastened to Spain, and was successful in substituting himself for O'Donnell.

NASMYTH, JAMES, practical engineer, inventor of the steam hammer, steam pile driver, and other self-acting tools, was born at Edinburgh, on the 19th August, 1808. While yet very young, he exhibited a marked taste for mechanical employments. The Edinburgh School of Arts afforded Nasmyth the opportunity of studying the principles of the various branches of science. After two years spent in that Institution, he entered the university of his native city. The capacity and the diligence manifested by young Nasmyth procured him the special friendship of his professor, in particular, Leslie became warmly attached

to the future mechanician. In 1828 Mr. Nasmyth set out for London, and entered the establishment of Messrs. Maudsley and Co., continuing there until 1832, when he returned to Edinburgh. In Edinburgh he remained for a couple of years, constructing tools for his contemplated invention. In the spring of 1835 he settled in Manchester, and commenced those special engineering improvements with which his name is now inseparably associated. In 1856 Mr. Nasmyth retired from business to devote his well-earned leisure to the pursuits of art and science.

NEILSON, JAMES BEAUMONT, the inventor of the hot blast process for making iron, which has been the means of producing such immense wealth to this country; born in 1792.

NESSELRODE, COUNT, Russian diplomatist and minister of state, born 1780.

NEWCASTLE, HENRY PELHAM CLINTON, duke of, born 22d May, 1811, and educated at Eton and Christ Church, Oxford. On coming of age, as earl of Lincoln, he was returned to parliament for the southern division of Nottinghamshire, in the first reformed parliament. He was a lord of the treasury from 1834 to 1835, and chief commissioner of woods and forests from 1841 to 1846, when he became chief secretary for Ireland. In that year, being ejected by his old constituents at the dictation of his father, for supporting Sir Robert Peel's free trade measures, he was returned by the Falkirk burghs, which he represented until he succeeded to his father's dukedom, in 1851. In the following year he took office under Lord Aberdeen, as secretary of state for the colonies; in this capacity the duties of war minister devolved upon him. The war with Russia necessitating a disjunction of these separate functions, the duke elected to discharge those of war minister. In this capacity he had to bear much unmerited odium, and in deference to popular feeling resigned. Lord Panmure, his successor, more than once publicly stated, that the chief improvements to which he owed his popularity were originated by the duke of Newcastle. On the return of the Palmerston ministry to power in 1859, he was made secretary for the colonies.

NEWMAN, F. W., born in London in 1805, educated at the academy at Ealing, he was sent in 1822 to Worcester College, Oxford, where, in 1826, he took first-class honours in classics and mathematics. In the same year he was chosen a fellow of Balliol College, but resigned his fellowship in 1830, from some scruples about signing the Thirty-nine Articles prior to taking his degree of M.A. On leaving the university he travelled in the East, being for a time the associate of the late Dr. Kitto. On his return to England he became classical tutor in Bristol, a position which he exchanged in 1850 for the classical professorship in Manchester new college. In 1846 he was appointed professor of Latin language and literature in University College, London. Mr. Newman has been a voluminous writer on classical, theological, and political topics. Originally belonging to the evangelical party in the English Church, he is now the leader of English rationalism.

NEWMAN, REV. JOHN HENRY, D.D., was born in 1801, in the city of London. He was the eldest of six children. His father was a partner in a banking-house in Lombard street; his mother belonged to a Huguenot family, which the revocation of the edict of Nantes had expelled from France. In 1808 young Newman was sent to school at Ealing, near London, where he remained about eight years. In December 1816 he matriculated at Trinity College, Oxford, and in 1818 he gained a scholarship, then lately thrown open to university competition. In 1822 he was elected a fellow of Oriel College, then in the full blaze of its literary fame, under the provostship of Doctor Copleston, afterwards bishop of Llandaff. This success introduced him to Dr. Whately, who was at the time resident at Oxford. Dr. Whately introduced him to the late Mr. Smedley, at that time editor of the *Encyclopædia Metropolitana*, which led to his engagement upon that work. Mr. Newman now rose rapidly to distinction in Oxford. In 1824 he was ordained a deacon and priest, and in the following year he was appointed vice-principal of Alban-hall; became one of the tutors of the college, and public examiner. In 1833 he joined the Oxford movement under Dr. Pusey, and was the author of the celebrated tract No. 90, written to prove that an English clergyman might honestly subscribe the Thirty-nine Articles, in a sense compatible with the holding of Roman Catholic doctrines. In the autumn of 1845 Mr. Newman was admitted into the Roman Catholic Church; and in 1852 he became Principal of the new Roman Catholic University established in Dublin, in obedience to the decree of the Synod of Thurles.

NICHOL, J. P., LL.D., professor of astronomy in the university of Glasgow, born in Montrose, 1804; is the author of several works on his favourite science, remarkable for the beauty of their style. His father was a bookseller in Montrose, and Mr. Nichol began life as schoolmaster of Dun, at the age of sixteen. He afterwards studied for the church, and was duly licensed as a preacher in the Scottish establishment. Literature and science, however, proved more attractive than theology, and to these he specially devoted himself. He was appointed professor of astronomy in Glasgow University by the Melbourne ministry. His various works, 'The Architecture of the Heavens,' 'The Solar System,' 'The Planetary System,' 'The Planet Neptune,' and his 'Cyclopædia of the Physical Sciences,' are all of them written with great chasteness and power. In the domains of moral science and philosophical investigation, Dr. Nichol has achieved a reputation scarcely less brilliant than in the peculiar walk of his professorship.

NICHOLS, JOHN GOUGH, eminent antiquarian, born in London, in 1807.

NIEPCE, DE SAINT VICTOR, to whom photographic art is indebted for some of its greatest and most remarkable developments, was born at St. Cyr, in 1805.

NIGHTINGALE, MISS FLORENCE, the best modern illustration of Hannah More's aphorism, 'the care of the poor is the profession of women,' born at Florence in 1823.

NOEL, THE HON. AND REV. BAPTIST WRIOTHSLEY, M.A., is the son of Sir Gerard Noel,

autobiography of Göethe and the 'Hellas' of Jacobs. His translations have great merit. He has likewise bestowed much attention on French literature; and in 1855 published a collection of songs translated from the French.

OXFORD, THE RIGHT REV. SAMUEL WILBERFORCE, bishop of, born in 1805; is the third son of the eminent philanthropist and M.P., William Wilberforce, He was educated at Oriel College, Oxford. As a spiritual peer the bishop of Oxford takes a prominent part in the debates in the House of Lords.

P

PAKINGTON, THE RIGHT HON. SIR JOHN, first lord of the admiralty, is the son of the late W. Russell, Esq., of Porvick Court, in the county of Worcester, and was born in 1799. He was educated at Eton and Oriel College, Oxford; and in 1831 assumed the name Pakington, as heir of his maternal uncle, the baronet of Westwood. In 1837 he was returned to the House of Commons as member for Droitwich, which he has ever since represented. In 1846 he opposed the free trade measures of Sir Robert Peel, who, notwithstanding, created him a baronet before leaving office. In 1852 he became colonial secretary under the government of Lord Derby; and on the noble lord succeeding to office in 1858, he was made first lord of the admiralty.

PALGRAVE, SIR FRANCIS, eminent antiquarian and historical writer, born in London. In 1827 he was called to the bar at the Inner Temple. Sir Francis first became known to literature by certain erudite articles on British antiquities, contributed to the current reviews, and by the publication of the 'Parliamentary Writs,' which he edited under the commissioners of public records. Since that time he has been constantly engaged upon works connected with the antiquities of English history. His 'Anglo-Saxon Commonwealth,' and the 'History of Normandy and of England,' are his greatest efforts. Since 1835 Sir Francis has held the office of deputy keeper of public records.

PALMERSTON, HENRY JOHN TEMPLE, Viscount, was born at Broadlands, in Hampshire, on the 20th October, 1784. The Temples trace their descent from one of the Saxon earls, anterior to the Norman conquest. The family was of some distinction as early as the times of Elizabeth; perhaps the most celebrated is the famous Sir William Temple, the friend of William III., and patron of Dean Swift. The family was first ennobled in 1722, when Henry Temple, Esq, was created Baron Temple, of Mount Temple, county Sligo, and Viscount Palmerston, county Dublin, both dignities being in the Irish peerage. The present Lord Palmerston was educated first at Harrow, then at the university of Edinburgh, under Dugald Stewart, and also at St. John's College, Cambridge. In 1806 he took the degree of M.A. at Cambridge; and in the same year he contested the representation of that university with Lord Henry Petty, the marquis of Lansdowne. Lord Palmerston was defeated at Cambridge, but was soon after returned for Beltchingleg. He subsequently sat for Newport, in the Isle of Wight, but at length attained the object of his ambition in being returned for Cambridge. As a member of the House of Commons, in those early days, he spoke seldom, but always interesting, and with a commendable directness of purpose, his business talents being from the first conspicuous. On the formation of the tory administration of the duke of Portland, he was appointed a junior lord of the admiralty, and in that capacity made his first important parliamentary appearance as a speaker, opposing a motion for the production of papers relative to Lord Cathcart's destruction of the Danish fleet. In this speech Lord Palmerston first propounded those notions of the necessity of secrecy in diplomacy, on which he has ever since acted with a faithfulness bordering on the unconstitutional. From 1810 until 1828 Lord Palmerston was a member of each successive administration, never seeming to interest himself much in general politics, confining himself almost exclusively to the business of his own department. Towards the close of the Liverpool administration he began to manifest a more liberal spirit than was general among his colleagues, attaching himself to Canning, and seeming to share his opinions. With Canning he was the friend of catholic emancipation, and with him, also, he was opposed to parliamentary reform. These tendencies becoming more marked on Canning's death, in May, 1828, he seceded from the government of the duke of Wellington. Out of office Lord Palmerston devoted himself to foreign questions—aimed to acquire the reputation of being Mr. Canning's successor. On the resignation of the duke of Wellington the whigs came into office, and Lord Palmerston, twenty years a tory secretary at war, now became foreign secretary in the whig administration. This ministry lasted until 1835, when the new whig administration under Lord Melbourne was formed, Lord Palmerston still holding the position of secretary of state for foreign affairs. On the re-accession of Sir Robert Peel to office in 1841, Lord Palmerston retired from office, continuing in opposition till 1846. In that year he resumed his old position under the ministry of Lord John Russell, holding office until 1851, when his escapade in connection with the recognition of Louis Napoleon's *coup d'état* led to his resignation. On the formation of the Aberdeen cabinet in 1852, Lord Palmerston took office as home secretary. On the dissolution of the Aberdeen ministry he became premier, and in that capacity conducted the war with Russia: the greatest in which our country has been engaged since 1815. The popularity of the noble lord continued to increase until the introduction of the 'conspiracy bill,' when the craven spirit which seemed to animate ministerial counsels roused the indignation of the people, and his prestige vanished. Since the fall of his cabinet, Lord Palmerston has constantly taken an active part in the discussion of general political questions; has visited his friend the emperor of France; and, though now going seventy-three, has once more resumed the functions of premier, as successor to Lord Derby.

PANMURE, THE RIGHT HON. FOX MAULE, Lord, born 22d April, 1801; was secretary of

state for the war department during Lord Palmerston's administration, and in that appointment took care not only of 'Dowb' but of the public interests generally.

PARDOE, Miss Julia, popular authoress of history and fiction, born at Beverley, in Yorkshire.

PATMORE, Coventry, poet, born at Woodford, in Essex, 23d July, 1823.

PATON, Joseph Noel, R.S.A., one of the most eminent of Scottish historical painters, born at Dunfermline in 1823.

PAXTON, Sir Joseph, was born at Miltoun Bryant, near Woburn, Bedfordshire, in 1802, and educated at Woburn free school. Being a younger son of parents in very moderate circumstances, he was necessitated, at an early age, to seek the means of self-support. A skilful gardener, he obtained employment at Chiswick, the seat of the duke of Devonshire. His superior abilities soon attracted the notice of the duke, who removed him to Chatsworth, constituting him director of his magnificent gardens at Chatsworth, and manager of his Derbyshire estates. The experience gained in this position was turned to good account in the Crystal Palace, of which Sir Joseph was the architect. He is now M.P. for Coventry.

PEDRO V., king of Portugal, a liberal monarch, the friend of science, born September, 1837.

PEEL, the Right Hon. Jonathan, secretary for war in the late Derby administration, is the fifth son of the first Sir Robert Peel, and was born on the 12th October, 1799. He entered the army in 1815, just as the great European conflicts of forty years were about to close; and has risen, in the ordinary course of promotion, to his present rank as a general. In 1826 he was returned by Norwich as its representative in the House of Commons, and continued to sit for that town during the five following years. In 1831 he was returned for Huntingdon, which he has represented ever since the passing of the reform bill. From 1841 to 1846 he held office under his brother, the late Sir Robert Peel, as surveyor-general of ordinance. From 1846 until 1858 he remained out of office. Upon the formation, in the February of that year, of the government of Lord Derby, he accepted the appointment of principal secretary at war.

PELISSIER, Amable Jean Jacques, marshal in the army of France, duc de Malakoff, and English ambassador, born at Maromme, in the arrondissement of Rouen, on the 6th Nov., 1794.

PENNEFATHER, Major-General Sir John Lysaght, was born in the county of Tipperary, in 1800, and entered the army in 1818. By the regular grades of promotion, in 1839 he had attained the rank of lieutenant-colonel. In 1843 he served as brigadier in India, under Sir Charles Napier, and contributed in no small degree to the memorable victory of Meeanee. In that battle he was severely wounded. On returning home he received the thanks of parliament, and the companionship of the Bath. In the Russian war he commanded the first brigade of the second division. His behaviour at the Alma received the highest eulogy in Lord Raglan's despatches. At Inkermann he was compelled, from the illness of General Evans, to command the entire division.

PENNETHORNE, James, architect, surveyor of Her Majesty's parks, palaces, and public buildings, and architect and surveyor of and revenues in London, was born in Worcester in 1801.

PERSIGNY, Jean-Gilbert-Victor Fialin, born January, 1808, devoted Bonapartist, one of the earliest and most attached friends of Louis Napoleon; principal instigator of the affair of Strasbourg; organizer of the *coup d'etat*, and present ambassador of France at the English court.

PETERMANN, August Heinrich, eminent geographer, born at Bleicherode, near Nordhausen, now professor of geography in the university of Gotha.

PETO, Sir Samuel Morton, Bart., constructor of some of the most important engineering works of the present century, is a native of Woking in Surrey, born 1809.

PHILLIPS, Charles P., author of 'Anecdotes of Curran,' a barrister-at-law and commissioner of the insolvency courts, known to fame as the defender of the notorious Courvoisier, murderer of Lord William Russell.

PHILLIPS, John, M.A., F.R.A., professor of geology in the university of Oxford, and assistant general secretary of the British Association. Prof. Phillips is a geologist, profoundly conversant with the principles of the science, an explorer of geological phenomena, an accomplished palæontologist, and the author of some valuable geological works local and general. Few living geologists possess a more intimate or wider acquaintance with the geology of England. Associated with his uncle, William Smith, the father of English geology, for more than a quarter of a century in exploration and surveying, he early acquired that intimate and practical knowledge of his favourite science which has rendered him so acceptable and valuable a teacher. In addition to his independent works, Mr. Phillips, in his capacity of secretary to the British Association, has arranged and edited twenty-five volumes of reports of proceedings and transactions. Mr. Phillips succeeded Dr. Buckland in the chair of geology at Oxford.

PICCOLOMINI, Maria, was born at Siena in 1835. Whilst only a child she gave the greatest promise of the eminence she has since attained. Her parents, desirous of encouraging her favourite passion, confided her musical education to Romani, one of the very first professional teachers in Italy. Under his instructions she made her *debut* in Florence, in 1852, in 'Lucrezia Borgia,' at the age of sixteen. For twenty successive nights, and always with immense success, did she appear in this part. On the last night of her engagement at the theatre, a band of young men, enthusiastic in their admiration of the *artiste*, sought to usurp the place of the horses in her carriage. Piccolomini sternly rebuked their levity, and heroically called upon them to keep their strength for Italy. After this successful *debut* in the capital of Tuscany, she spent four years in a tour through Italy, remaining a season at each place of importance. Wherever she appeared, she immediately became a favourite. This Italian triumph at once arrested the attention of the directors of the opera of London and Paris; and, in 1856, Mademoiselle Piccolomini appeared, for the first time, before an

English audience. Her success in England and America has been equal to her success in Italy. Piccolomini belongs to one of the most illustrious of European families.

PICKERSGILL, FRED. RICHARD, A.R.A., painter, born in London in 1820, and studied at the Royal Academy. He exhibited his first oil picture, 'The Combat between Hercules and Achelous,' in 1840. At the cartoon exhibition in Westminster Hall in 1843, Mr. Pickersgill received one of the ten additional prizes for his cartoon of the 'Death of King Lear.' In 1847 one of the three first-class prizes was awarded him for his painting of the 'Burial of Harold.' In November of that same year he was elected A.R.A. Since then he has been a regular exhibitor.

PIUS IX., GIOVANNI MARIA MASTAI FERRETTI, who assumed the name of Pius on his election to the papal chair, is a member of a noble Italian family, and was born near Ancona, in 1792. In youth he was distinguished for his mild and charitable disposition. At the age of eighteen he went to Rome to join the bodyguard of Pius VII. An epileptic attack, however, prevented the attainment of his wishes, and seems to have determined the course of his after life. He entered a religious seminary, and there distinguished himself by those qualities which most readily win the favour of the '*religious*.' Sent on a special mission to South America, he acquired some insight into politics and diplomacy. In the ardour of his newly acquired knowledge, he set about preparing a paper on a system of political amelioration for the 'states of the Church.' In 1829 he was nominated archbishop of Spoleta. In 1840 he was raised to the dignity of cardinal, by the title of St. Peter and St. Marcellinus; and in June, 1846, he was elevated to the papacy. The leading events of his reign are too well known to need recapitulation: from being the most popular, he has long been one of the most detested of the occupants of the papal throne.

PLAYFAIR, LYON, eminent chemist, born in Bengal in 1819. His father's family resided at St. Andrews, in Scotland; to its university he was sent to receive his education. While at St. Andrews, the predilection for chemistry which he evinced induced his friends, in 1834, to send him to Glasgow, where he studied chemistry under Professor Graham. In the following year he went to India. On returning to England he found his old Glasgow professor had been transferred to London, and Mr. Playfair again placed himself under his instructions. In 1838 the fame of Liebig attracted him to Giessen. In Liebig's laboratory he commenced the study of organic chemistry, and successfully cultivated original analysis. Before returning to England he took the degree of doctor of philosophy in the university of Giessen. In 1843 he became professor of chemistry, at the Royal Institution of Manchester, where he laid the foundation of his fame as a teacher. Dr. Playfair was recently appointed to the chemical chair in the university of Edinburgh, vacant by the death of another of Liebig's pupils, Dr. Gregory.

POERIO, CARLO, was born at Naples in 1803. He is the second son of the celebrated lawyer, Joseph Poerio, Baron of Balustro. At twelve years of age Carlo followed his father into exile. He had been counsellor of state and attorney-general in the high court of justice at Naples. Carlo was educated at Florence, with his only brother, Alexander, and his cousin, the duke of Diano, by some of the most distinguished professors in Tuscany. In 1812 he returned to Naples with his father, when he followed him again into exile in 1821, when the constitution fell, and with it the chamber of which he had been member. On this occasion, for state reasons, his father was banished to Austria, together with Generals Colleta (the historian), Arcovite, and Padrinelli, and the deputies Borelli (the philosopher), and Pepe. In 1824 the Poerio family went to Tuscany, and Carlo remained in Florence with them until 1828, when he accompanied his mother to Naples, where he applied himself to his studies, and to the profession of an advocate, and became distinguished as the leading gratuitous defender of prisoners at the High Court of Justice. Living in the closest intimacy with the leading men of the country, and professing openly the principles of representative government, his politics were distasteful to the ruling powers, and he was three times subjected to prosecution for political offences. In 1848, when a free and representative government was introduced into Naples, Carlo Poerio was chosen by the king as director, and under secretary for home affairs, and, as such, he had charge of the general police regulations of the kingdom; and after filling these posts for a month he was advanced to a seat in the cabinet as minister of public instruction. The Duke of Sorracapriola, the Chevalier Beralli, Prince Cariata, Baron Savarese, Prince Torella, General Degli Uberti, Counsellor Saliceti, Baron Bonani, and Prince Dentice, were his colleagues. In his ministerial position he took part in the council which was held, at the instance of Lord Minto, for the settlement of the Sicilian question. Carlo resigned office on the 3d April, 1848, and he was returned to parliament at the general election, as deputy for the city of Naples, and province of Terra-di-lavora. On the sad 15th May, when the lazzaroni were set on by the king's myrmidons to pillage the city of Naples, he was sent upon a deputation to the ministry, with his colleagues Capitelli, Pica, and Imbriata, and he struggled hard to avert that fratricidal conflict. Having been re-elected to the chamber, after the *coup d'état*, for Naples and Gaeta, he sat on the opposition, and strenuously defended the constitution, to which the king had sworn against the inroads of a reactionary policy. When the chamber was dissolved, and the dreadful system of persecution, which continued for the last ten years, commenced, Poerio resorted to every lawful means to combat the deceitful spirit of reaction. The government then offered passports to Poerio, but he, having refused to leave the country, was imprisoned, provisionally, as a matter of precaution, with some of the most distinguished men of his country, until the celebrated prosecution of the *Unita Italiana* was laboriously concerted for his destruction. After the revelations disclosed by Mr. Gladstone, of that judicial assassination, derived from honest and impartial witnesses, it would be superfluous to dwell on them particularly. Poerio

to science, he was created a knight. In the following year he once more set out for the arctic regions, this time in search of his former companion, Sir John Franklin. An account of this 'Arctic Searching Expedition' was published by Sir John in 1851. This work, in addition to the record of the progress of the expedition, contains much interesting information upon the geology, geography, and natural history of the northern part of the American continent. In 1855 Sir John retired from service as a naval medical officer.

RIPON, Right Rev. Robert Bickersteth, D.D., bishop of, born in 1816, at Acton, Suffolk, was wholly undistinguished at the university of Cambridge; but though not a learned, the bishop is a popular divine. In 1856 he was promoted, through the influence of Lord Shaftesbury, to the see of Ripon.

RISTORI, Adelaide, celebrated Italian actress, born 1821. Has achieved a European fame by the splendour and versatility of her powers.

RITCHIE, Leitch, was born at Greenock, in the beginning of the present century. Destined for commerce, for a time he was engaged as a bank clerk in Glasgow. In Glasgow he assisted in establishing the *Wanderer*. Subsequently he removed to London, and devoted himself wholly to literature. From London he removed to Edinburgh, to edit *Chambers's Journal*, a position he still holds.

ROBERTS, David, R.A., was born at Stockbridge, Edinburgh, 24th October, 1796. He was apprenticed to a house painter in Edinburgh, but his taste was for something superior. He studied at the Trustees' Academy, and made his *debut* as a scene painter at Drury Lane theatre. Since then his career has been one of unprecedented success; and he is one of the few English painters who are esteemed and known on the continent. He has travelled everywhere for subjects, but his principal work is 'Sketches in the Holy Land,—Syria, Idumea, Arabia, Egypt, and Nubia.'

ROEBUCK, J. A., M.P., was born at Madras in 1801. When but a boy he went out to Canada, and in 1824 returned to study law. In 1832 he was admitted a barrister of the Inner Temple, and was returned as M.P. for Bath at the first election after the Reform Bill. His political opinions are strictly radical. He has sat for Sheffield since the election of 1847. He is a powerful orator, but mingles much asperity with his eloquence. As member for Sheffield he has taken a prominent part in the most important debates in the House of Commons. In January, 1855, he moved for that inquiry into the conduct of the Russian war which caused the Aberdeen ministry to resign; and it was he who acted as chairman of the committee of inquiry, appointed in pursuance of that motion. Since that time he has made himself conspicuous by his attacks on the emperor of the French, against whom he has directed all the force of his invective. Mr. Roebuck has contributed pretty extensively to the reviews of the day, and is the author of a 'History of the Whig Ministry of 1830.'

ROGERS, Henry, one of the professors of the Independent college, Springhill, Birmingham. He was educated for the ministry. His chief fame has arisen from his contributions to the 'Edinburgh Review,' and the 'Eclipse of Faith.'

ROGERS, Henry Darwin, professor of natural history in the university of Glasgow, was born in Pennsylvania, United States. Both his parents were of Scottish extraction. Like our Gregories and Thomsons, he belongs to a family in which the passion for science seems hereditary. His father long held the important appointment of professor of physics and chemistry in the most ancient seat of learning in America, the old college of William and Mary; and, trained in the laboratory of their sire, three brothers of the professor have all held scientific appointments in the United States. At the age of twenty-one, Professor Rogers was appointed to the chair of geology in the university of Pennsylvania. While holding this appointment he was entrusted with the geological surveys of New Jersey and Pennsylvania. From the limited extent of territory, the New Jersey survey was but a minor task, and early completed. Pennsylvania, a state embracing half the area of Great Britain, and a region of complicated geological structure, was a more gigantic work, occupying some twenty-two years. The results of the survey have lately been published in three volumes, illustrated by numerous engravings, and elaborate geological maps of Pennsylvania and its coal fields. This work is the most complete survey that has yet been made of the coal fields of the world. Professsor Rogers is a fellow of the Royal and Geological Societies of London and Edinburgh, and recently the university of Dublin conferred upon him the degree of LL.D. To great scientific attainments the learned professor unites great popular powers.

RONGE, Johannes, was born at Bischofswalde in Silesia in 1813. His father was a farmer, and Ronge had in the summer months to tend his father's sheep, and in the winter time attended the school. From 1827 to 1836 he studied at the gymnasium of Neisse, where he made much progress. He studied theology at the university of Breslau, and in 1840 obtained a chaplaincy at Grottkau. He showed great zeal in the education of the young, and aroused much opposition in consequence. In 1842 he was deprived of his office. He afterwards wrote several treatises calling upon the liberal party to form separate religious societies and throw off the papal yoke. This so far succeeded till 1848, when these societies were suppressed, and Ronge obliged to flee to England. He has since then continued in London teaching the German language.

ROSAS, Don Juan Manuel De, formerly president of the Argentine Confederation, born in South America, but of Spanish extraction. Having exhibited capacity and courage in several subordinate positions, in January, 1831, he was appointed governor of Buenos Ayres, a position in which he speedily distinguished himself by his promptitude and energy. In 1835 he became president of the Argentine Confederation, which he held with varied fortune, until at length his rule having become obnoxious, the states revolted, Rosas' army was routed, and he sought refuge in England.

ROSE, Henrich, was born at Berlin in 1795, studied and gradnated at the university at Berlin. In 1823 he became professor extraordinary of chemistry, and in 1835, professor in ordinary. As a practical analyst, especially in the department of

Landscape Painting to all the Ancient Masters—by a Graduate of Oxford.' This work, powerful though paradoxical—evincing an earnestness bordering on enthusiasm, and an affluence of language which reminded the reader of Jeremy Taylor, or Sir Thomas Brown, at once secured for its author a high position as a man of genius. After an interval of ten years, the subsequent portions of this work were published. 'Modern Painters' was followed by 'Seven Lamps of Architecture,' a work quite as self-reliant and paradoxical as its predecessor. This was succeeded by 'The Stones of Venice.' If not satisfactory as an architectural work, as a poetic rhapsody on the ancient glory and hopeless ruin, historic associations, and pictorial wealth of the fallen city, it was unequalled and unapproached. Lectures on 'Architecture and Painting;' the 'Crystal Palace in its Relation to the Prospects of Art;' notes on the 'Construction of Sheepfolds;' a pamphlet on 'Pre-Raphaelitism,' and notes on the 'Exhibitions of the Royal Academy,' are his chief recent contributions to art criticism.

RUSSELL, JOHN SCOTT, F.R.S., was born in the vale of Clyde in 1808. His father was a clergyman. Young Russell received a university education, and was afterwards employed in a workshop as an engineer. He has become a most extensive iron shipbuilder, and has introduced several important improvements—results of his investigations and discoveries concerning 'the great solitary wave of translation.'

RUSSELL, THE RIGHT HON. LORD JOHN, M.P., was born in London, 18th August, 1792. Was educated at Sunbury, Westminster school, and Edinburgh University. At the age of twenty-one he entered the House of Commons as member for the whig borough of Tavistock, and attached himself at once to the opposition then arrayed against the ministry of Lord Liverpool and Castlereagh. Taking part in almost all those questions that have generally been considered whig questions—parliamentary reform being from the first the object of his peculiar attention; his repeated motions upon that subject, combined with the progress of popular opinion, prepared the country for the bill of 1832. In 1826 so small was the majority that could be mustered against the measure, Mr. Canning declared the question virtually settled. In 1827 Lord Liverpool was struck down by apoplexy, and Canning was created premier. The junction of Lord Lansdowne and Mr. Tierney, with Mr. Canning, who was pledged against reform, delayed the question for some time. Not until 1828 was Lord John Russell left free to pursue a vigorous and aggressive reform policy. From the beginning of 1828 until the close of 1830, no one of the reform leaders in the House of Commons exhibited greater activity or greater tenacity of purpose in the advocacy of all those liberal measures which it is now deemed the glory of our parliament to have adopted. On the resignation of the duke of Wellington, in 1830, Lord John Russell entered office under Earl Grey, as paymaster of the forces. The Grey cabinet came into office avowedly to carry parliamentary reform. The most important and onerous part of the labour of the ministry, in connection with the question, was performed by Lord John Russell. In conjunction with Sir James Graham, Lord Durham, and Lord Duncannon, he was appointed to prepare the bill that was to be submitted to the house. On the 1st March, 1831, after having submitted the results of their joint labours to their colleagues in the ministry, Lord John Russell introduced the Reform Bill to the House of Commons. The sweeping character of the measure was generally understood to have been given it mainly by Lord Durham. After a debate of unparalleled violence, Lord John's bill passed by a majority of one. Having, however, been thrown out in committee, parliament was dissolved. In the new parliament Lord John was returned for Devon. The bill was again introduced, and passed triumphant through all its stages in the new house. The bill was, however, thrown out in the lords, by a majority of 41. The ministry was ready to resign; but a vote of confidence passed in the commons, by a majority of 131, saved them from that necessity. Parliament was prorogued. On re-assembling, the bill, somewhat modified, was again introduced in the lords, who, still hostile, rejected it by a majority of 35. The ministry resigned; the duke of Wellington came into power. The responsibility of office disclosed to the duke the fact that toryism, such as his, was now become an impossibility. He bent before the inevitable. Earl Grey resumed office May 18, 1832, and on the 7th June the Reform Bill became law. Through all this crisis the conduct of Lord John Russell was of that intrepid character which adds intensely to popularity. In the various important measures passed by Earl Grey he had an ample share; and when that ministry fell, towards the close of 1834, he went into opposition with a stainless reputation as a consistent and energetic whig. On the resignation of Sir Robert Peel, in April, 1835,—Earl Grey, withdrawn from public life, Stanley and Graham become seceders from the liberal ranks on the Irish Church question, Lord Brougham more and more isolating himself from the party with which he had hitherto acted,—Lord Melbourne and Lord John Russell were left the leading representatives of whigism. In the ministry formed under Lord Melbourne he became home secretary, and leader of the House of Commons. The post of home was subsequently exchanged for that of colonial secretary. Whigism had, however, begun to lose its popularity; and advanced political parties now began to attack Lord John Russell as a finality minister. Lord John, now member for Stroud, gave the world an exposition of his political creed in a series of letters addressed to his constituents, on the principles of the reform act. Public confidence, however, not returning to the whig party, and the results of the general election of 1841 being decidedly unfavourable,—in August, 1841, the ministry resigned. During the ministry of Sir Robert Peel the anti-corn-law league became a 'great fact,' and Lord John Russell, if he did not exactly think with Lord Melbourne, that the repeal of the corn laws was the maddest thing he had heard of, was at least averse to so extensive a proposal, his pet scheme being a fixed duty. In the autumn of 1845 he, however, became a convert to immediate repeal. On the fall of the ministry of Sir Robert Peel, Lord John became premier.

University of Cambridge,' and a 'History of the Inductive Sciences,' and a 'Synopsis of the Classification of the British Palæozoic Rocks,' form the chief independent works of the learned professor.

SEYMOUR, RIGHT HON. SIR G. H., is son of the late Lord George Seymour, and was educated at Oxford. He entered the public service in 1817, and has occupied important situations in that service ever since. He was English ambassador at the Russian court from 1851 till within a few weeks of the late war being declared. He is engaged now at Vienna in a similar capacity.

SHAFTESBURY, EARL OF, was born 28th April, 1801, and educated at Oxford. He was a member of the House of Commons for various places from 1826 till 1851, when he succeeded his father in the peerage. He belongs to the evangelical portion of the Church of England, and has laboured both in and out of parliament for the improvement of the social condition of the labouring classes.

SIMPSON, JAMES YOUNG, M.D., was born at Bathgate in 1811. In 1840 he was appointed professor of midwifery in the university of Edinburgh, and in 1847 introduced chloroform. He stands high as a professor as well as a general medical adviser, but his fame rests on his being the discoverer of the anæsthetical properties of chloroform.

SMIRKE, SIR ROBERT, R.A., is an architect of some note. The British Museum in 1823, and the New Post Office in 1829 are from his designs.

SMITH, ALBERT, author and popular lecturer, was born May 24, 1816, at Chertsey, educated at Merchant Tailors', and subsequently studied medicine at the Middlesex Hospital, becoming a member of the College of Surgeons in 1838. Finding his pen brought him more money than his lancet, and after contributing 'The Confessions of a Dissecting-Room Porter' to the *Medical Times*, he began, in 1841, to follow a literary career with earnest purpose. His first book was the 'Wassail Bowl,' which has since been followed by the 'Scattergood Family,' 'Christopher Tadpole,' 'The Pottleton Tragedy,' &c. In 1849 he visited the East, and on his return published the highly popular work, 'A Month at Constantinople.' In 1851 he ascended Mont Blanc, and subsequently produced his celebrated entertainment of the name, given for a thousand times in the Egyptian Hall, London.

SMITH, ALEXANDER, was born on 31st December, 1830, in Kilmarnock. He was first destined for the ministry, but a severe illness, and the subsequent inability of his parents, rendered the preparatory studies impossible. Mr. S. wrought as a lace-designer in Glasgow. The 'Life Drama' and 'City Poems' are his principal works.

SMITH, THOMAS S., M.D., was born about 1790. He is distinguished both as a physician and author, and has been frequently employed on parliamentary commissions.

SMITH, WILLIAM, LL.D., was born in London in 1814. Educated at the London University, and was intended for the bar; but his taste for the classics was so great, that he devoted himself entirely to their study. He is professor of classics in the new college, as well as classical examiner in the university. He has published numerous classical works.

SOMMERVILLE, MRS. MARY, the most profoundly scientific lady of the age, born in Scotland about the close of the last century. Known to fame as the author of the 'Connection of the Physical Sciences,' 'Physical Geography;' honorry member of the Royal Astronomical Society.

SOULOUQUE, FAUSTIN I., late negro emperor of St. Domingo, born in 1789.

SPARKS, JARED, eminent American biographer, born in Connecticut towards the close of last century. The work by which he is best known is his edition of 'The Correspondence of George Washington.'

SPOHR, LUDWIG, eminent German musician, born at Sessen, in the duchy of Brunswick, in 1783. The memorials of the early career of Spohr are of the scantiest character. He first emerged from obscurity as chamber musician to the duke of Brunswick. In 1804 he travelled Germany, giving concerts and acquiring an immense reputation as a violinist. In 1805 he became concert master to the duke of Saxe-Gotha. In 1814 he was present at the Congress of Vienna, where he eclipsed all rivalry by his brilliant powers. Shortly subsequent to this great success he turned his attention to dramatic composition. The result was those beautiful operas —'Faust,' 'Jessonda,' 'Azon et Zemire,' now so well known to Europe. 'The Last Judgment,' 'The Crucifixion,' and 'The Fall of Babylon,' are the composition of the latter portion of his life. These sacred pieces are deemed the noblest efforts, in that particular walk of musical art, that have appeared since Handel produced his sublime oratorios. For a long time Spohr has lived apart from the severe labours of the composer, enjoying, in the gloaming of life, a happy old age.

SPURGEON, REV. CHARLES H., was born on 19th June, 1834, at Kelvidon, Essex. His father was a Baptist minister, and at sixteen, young Spurgeon was immersed. Shortly after that, he commenced his career as a preacher. When nineteen he made his first appearance before a London audience. In a short time Newpark Street chapel was crowded, Exeter Hall was also filled, and subsequently his congregation proceeded to the Surrey Music Hall.

STANFIELD, CLARKSON, R.A., was born at Sunderland about 1798. He commenced life as a sailor. This has no doubt contributed to his remarkable success in sea painting. He has also worked hard and most successfully as a landscape painter.

STANLEY, REV. ARTHUR PENRHYN, born December 1815, and graduated at Oxford in 1838. Author of 'The Life and Correspondence of Dr. Arnold.'

STANLEY, THE RIGHT HON. EDWARD HENRY SMITH, M.P., was born at Knowsley, July 21, 1826, and received his early education at Rugby, where he was a pupil of the late Dr. Arnold. Having completed his education at Rugby school, he entered Trinity College, Cambridge, where he closed a distinguished university career by graduating, in the spring of 1848, as a first-class in the classical tripos, mathematical honours, and a declamation prize. Very shortly after leaving the university he contested the

1856. In 1856 Mrs. Stowe again visited Europe; and is understood to be now engaged upon a work on the social condition of the old world.

STRATFORD DE REDCLIFFE, STRATFORD CANNING, first viscount, was born in London, January 6, 1788, and received his early education at Eton. In 1806 he entered Cambridge University, but left in the following year on receiving a subordinate appointment in the foreign office. Having in the interim filled satisfactorily various subordinate positions in the diplomatic service, in 1812 he returned to Cambridge, and took the degree of M.A. In 1814 he was appointed envoy to Switzerland, and assisted at the drawing up of the treaty of alliance between the Helvetic cantons, which formed the basis of the federal compact. In 1820 he acted as British plenipotentiary to the United States. After a three years' sojourn in Washington, he was appointed on a special mission to St. Petersburg, and subsequently to Vienna. Having discharged satisfactorily the duties of these missions he was next sent to Constantinople as ambassador extraordinary, in 1825. At that time the heroism and the sufferings of the Greeks had drawn upon them the admiration and the sympathies of Europe, and Mr. Canning's good offices were energetically exerted with the Sultan on behalf of that historic race, for the purpose of terminating a condition of matters which had become the opprobrium of Europe. In 1827 Mr. Canning returned to England, and had the honour to be elected to the House of Commons as member for Old Sarum. In 1831 he was again deputed on a special mission to the Sublime Porte, with reference to the fixing of the boundaries of the kingdom of Greece. Having settled the treaty, on the basis of which Otho ascended the Greek throne, Sir Stratford Canning was now appointed a special envoy to the courts of Lisbon and Madrid. In December, 1834, Old Sarum being no more, he was elected for King's Lynn, Norfolk, which he continued to represent until 1842, when he was appointed ambassador at Constantinople. In 1852 he was elevated to the peerage as Viscount Stratford de Redcliffe, a title which he chose to mark his paternal descent from William Cannynge, founder of the church of St. Maryc Redclyffe, at Bristol. Able, well-informed, and resolute, Viscount de Redcliffe has upheld British honour with the highest intrepidity. His influence in Turkey has been invariably exerted in behalf of civilization and Christianity, and science and protestantism have ever found in him a warm friend.

STRAUSS, DAVID FRIEDRICH, was born at Ludwigsbourg, in Wurtemberg, on January 27, 1808, educated first in the school of his native town, and subsequently at Blanbeuren and Tübingen. He is the author of the 'Life of Jesus, Critically treated,' a work which aims at reducing the evangelical history to a series of myths.

STRICKLAND, MISS AGNES, authoress of the 'Queens of England.' The literary genius of Miss Strickland manifested itself at a peculiarly early age: when only twelve years she had written the 'Red Rose,' a romantic historical chronicle, in rhyme, intended to commemorate the rise and fall of the house of Lancaster. When visiting a wealthy relative in London, whose mansion was in close proximity to the British Museum, she learned the value of its treasures, and determined the future of her career as an authoress.

T

TAYLOR, ISAAC, author of the 'Natural History of Enthusiasm,' and other works, born about the close of the last century. Originally destined for the church, and remarkable for his philosophic religious tastes and sympathies.

TAYLOR, TOM, dramatic author, born at Sunderland in 1817.

TENNYSON, ALFRED, poet-laureate, was born in 1810, at Somersby, a small parish in Lincolnshire, of which his father was rector. Of a family of twelve children, Alfred is the third. His elder brothers, Frederick and Charles, have both of them published poems. The laureate's father, Rev. George Clayton Tennyson, LL.D., was a man of varied talents and tastes—an amalgam of poet, painter, architect, musician, linguist, and mathematician. After receiving a preliminary training at the grammar school of Louth, Alfred was sent to Trinity College, Cambridge, where he specially distinguished himself, obtaining the chancellor's medal for an English poem on Timbuctoo. Unlike most college performances, this poem exhibited the possession of rare poetic power. The year following this university success 'Poems, chiefly Lyrical,' by Alfred Tennyson, were published. This early volume now owes its chief interest to the fact that it was the first of Tennyson's acknowledged works. Three years after this maiden effort, 'Poems by Alfred Tennyson' were published by Moxon. This second volume contained 'The Miller's Daughter,' 'A Dream of Fair Woman,' 'The Palace of Art,' 'The May Queen,' &c.; and, compared with his first volume, was a surprising advance at once in richness of thought, and beauty of imagery. From this time onward, the circle of Tennyson's admirers continued to widen. In 1842 he published a collected edition of his works in two volumes, and at once took rank as the poet of the age. Since then he has published 'The Princess,' a medley, 'In Memoriam,' 'Maud,' and an ode on the 'Death of the Duke of Wellington,' and the 'Idylls of the King.' A few years ago, Oxford created him a D.C.L. The genius of Tennyson is essentially retiring, meditative, and spiritual. He goes but little into society, and in his marine retreat at Farringford, Isle of Wight, has effectually sequestered himself from the herd of literary gossips who might otherwise rob him of the luxury of contemplation.

THACKERAY, WILLIAM MAKEPEACE, novelist and essayist, was born at Calcutta in 1811. His father was the son of the Rev. Richard Thackeray of Hackley, in Middlesex, and held a situation in the East India Company's civil service. The ship which conveyed young Thackeray to England touched at St. Helena; a black servant took the boy a walk over rocks and hills, until they came upon a garden where a man was walking. 'That is he,' said the black man, 'that is Bonaparte; he eat three sheep every day, and all the children on whom he can lay hands.' When

writings as a journalist powerfully contributed to the revolution of 1830. When Armand Carrell projected the *National*, Thiers became one of its editors, and prepared the way for the advent of Louis Philippe. On the revolution of the three days it was Thiers who undertook the mission to Neuilly, to invite the count to assume the government. As might have been anticipated, M. Thiers at once became a prominent man under the new system. As deputy for Aix, the influence of his easy, familiar, yet bold and incisive oratory, soon made itself felt. In 1832 he became minister of the interior, and in that capacity directed the measures for the suppression of the Lyons insurrection. In 1836 he obtained the highest position of a French subject, being appointed to the presidency of the council, and the ministry for foreign affairs. With the fall of Louis Philippe, the political career of M. Thiers has for the present closed. He now resides in Paris, utterly unreconciled to the empire.

THIRWALL, Right Rev. Connop, D.D., bishop of St. David's, and historian of Greece; born at Stepney, Middlesex, 1797.

THOLUCK, Friedrich-August-Gotthren, one of the most eminent of modern German theologians, was born at Breslau, on the 30th March, 1799. In addition to his 'History of Greece,' the bishop has published some sermons of very superior merit.

THOMPSON, Major-General Thomas Peyronnet, political reformer and author, born at Hull in 1783, author in 1827 of the famous 'Corn Law Catechism,' which may be said to have sealed the fate of the bread tax.

THORBURN, Robert, A.R.A., miniature painter, born at Dumfries in 1818.

TICKNOR, George, author of the 'History of Spanish Literature,' and professor of the history of modern languages and literature in Harvard University, was born in Boston, Massachusetts, in 1791.

TITE, William, M.P., F.R.S., distinguished architect, born in London, towards the close of the last century.

TODLEBEN, Francis Edward, general of engineers in the Russian army, and famous for his fortification of Sebastopol, born 1818.

TROLLOPE, Mrs. Frances, one of the most prolific of female writers, was born about the year 1787. 'Domestic Manners of the Americans' formed her introduction to the English public. From the piquant character of her sketches the work acquired a large circulation. Since the appearance of her first work she has been a voluminous contributor to the light literature of the day. Some years ago Mrs. Trollope, who now has long been a widow, disappeared from English circles, and fixed her residence at Florence.

U

UHLAND, Johann Ludwig, popular and patriotic German poet, born at Tübingen, in 1787, and educated in its public schools. Having adopted law as a profession, he became an advocate in 1810, and shortly subsequently received the degree of doctor of laws. Even before he entered upon the study of law, Uhland was a poet; and his muse, like the muse of Burns—intensely national—found a fitting theme in the French aggression of the first Napoleon. In a series of soul-stirring lyrics he denounced the Gallic invaders of the Fatherland. The popularity of these patriotic effusions may be guessed from the fact that, before 1846, seventeen editions had been called for. From 1819 he became a member of the representative assembly of Wurtemberg, gaining by his superior abilities and varied information a preponderating influence. In 1830 he was appointed professor of the German language and literature in the university of his native town. In 1844-45 he published a work, doing for German what Scott had done so well for Scottish minstrelsy—an admirable collection of ancient high and low German popular songs. In 1848 he was elected to represent Tübingen, in the United German National Assembly, in which he spoke and acted with the democratic party. Uhland, in addition to his poetry, has also given the world some superior prose compositions, chiefly devoted to the elucidation of northern mythology. His songs are, however, the most valuable of his literary productions,—truth, depth of feeling, picturesque representation of nature, and energetic appeals to nationality, often mingling broad humour with impassioned earnestness, are their leading characteristics. The popularity of the poet is unbounded.

ULLMANN, Karl, distinguished theological and historical writer, was born at Epfenbach, near Morbach, in Baden, 1796.

V

VAUGHAN, Rev. Robert, D.D., editor of the 'British Quarterly Review,' a distinguished writer, the judicial impartiality of whose works has not seldom prevented their attaining the popularity to which their worth entitles them. Sneered at originally when starting the 'British Quarterly' by some of those who might have been expected to have hailed the disinterested effort to elevate Nonconformist literature, the distinguished success of that review has shown that the powers of its projector are of no common order.

VERDI, Guiseppe, popular Italian composer, author of a number of the most successful operas that have been produced during the last twenty years. Verdi's musical education has been but indifferent. With a natural vein of melody, almost all his works display great poverty of conception and combination.

VERNET, Horace, French historical painter, born in Paris, 1789.

VICTOR-EMMANUEL II., king of Sardinia, son of Charles-Albert by a Hapsburgian princess, was born in March, 1820; and, until the resignation of the Sardinian crown in his favour, by his father, bore the title of duke of Savoy. In 1842 he married the Archduchess Adelaide, of Austria. When Charles-Albert took the field against Austria, the present king of Sardinia bore himself with even more than the wonted hereditary courage of his house. On the fatal issue of the battle of Novara, his father's abdication gave to him a tottering throne. The pupil of the Jesuits,
